TREASURY BILLS

The Controller of the Currency notifies that tenders for Rs. 1½ crores of three months Treasury Bills were opened on Tuesday, November 13. The total amount offered was Rs. 2,91,50,000. Tenders at Rs. 99-10-3 were accepted in full and those at Rs. 99-10-0 allotted approximately 48 per cent. The total amount accepted was Rs. 1½ crores, the average rate of accepted tenders being Re. 1-7-10 per annum.

Tenders for Rs. 1½ crores of three months' Treasury Bills will be received on Tuesday, November 20. Successful tenderers should make payment on Friday, November 23. Other conditions are as usual.

Three months' intermediates will be sold from November 14 to 19 at Rs. 99-10-6 per cent. subject to the conditions previously announced.

Three months' intermediates sold from November 6 to 12 amounted to Rs. 13,50,000.

STERLING TENDERS

The Controller of the Currency notifies that on Wednesday, November 14, tenders to the amount of £100,000 at 1s. 6 1/16d. were received and allotted in full.

£1 million will be offered for tender on Wednesday, November 21, on the same conditions as previously announced.

CONGRESS TRIUMPHS

The results of the elections in Madras leave no room for doubt that the Congress is in full enjoyment of the suffrage of the people. The elections in other centres are not over ; but Madras affords a sample of the popular attitude by which to judge the preferences of the country in general. And this is hardly surprising. For on the one hand, the Congress is prepared to try its hand again at the Councils. On the other, the last Assembly was an impressive demonstration of the dangers which might follow the absence of a truly popular party in the Legislature. Its acts, alike of commission and omission, were dangerous to the true national interests. There was hardly any check to the growth of unwholesome policies or the passage of unpopular legislation. It is natural that the popular verdict should go against such legislators, who make up the parties rival to the Congress. It is, indeed, meaningless to regard the elections in India as a tussle between parties. For, as the British Government themselves often insist, there is hardly any party worth the name, barring the Congress ; and that, too, chooses to figure in the role of a political party only at times. For parties subsist on the changing circumstances and moods of the electorate which accords its sanction alternately to extremism and moderation. And when the Congress itself does all this alternation between extremism and moderation, there can, in the nature of things, be no room for two parties. The other sections of politicians are shown up as mere supporters of the present position, without any anxiety for the progress of the nation. And one may be sure that, except in certain special constituencies or predominantly communalistic areas, the Congress is bound to win.

* * *

It is unfortunate that the triumph of the Congress should have involved the loss to the Central Legislature of some notable personalities. In the Madras elections both Mr. Ramaswami Mudaliyar and Sir Shanmukham Chetty have been defeated. In their defeat there, is, indeed, something to regret. Mr. Mudaliyar had during his term shown himself a capable and painstaking student of public affairs, a keen debater and even a good fighter on the Opposition side where crucial political questions are not involved. Of Sir Shanmukham's abilities, too, there can be no question. And in his case, it is a pity that it has not been possible for this country to borrow the British tradition of leaving the Speaker uncontested in his constituency. Sir Shanmukham himself showed little claim to such a courtesy from the other parties. In one so clearly marked out on election for the Presidential chair, violent attacks on the Congress and extravagant claims for Ottawa are as unbecoming as they are unnecessary. And that he was defeated in a close constituency, which he preferred, with somewhat bad tactics to the general constituency in his own district is only a proof of the depth of public feeling alike as regards the Congress and as regards Ottawa. Sir Shanmukham should have known that the authorship and aggressive championship of the Ottawa Pact are but poor claims to the suffrage of a commercial constituency, which has been among the foremost to denounce these restraints on foreign trade. In so far as Sir Shanmukham and Mr. Mudaliyar have made it a point of honour for the country to defeat them, they have none but themselves to thank for the result.

It is not to be supposed that, if the Congress triumphs, the new Legislature would suffer in the ability of its *personnel*. The last Assembly would ever carry the palm for ignorant imbecility. And the incoming Congressmen would include men like Mr. Satyamurti who could master any subject that ordinarily comes up before the Legislature and engage acknowledged experts in close debate on its merits. There is every reason to believe that the new Assembly will not suffer in comparison with Pandit Motilal's Assembly, where the ability of the Opposition was the admiration of the Government benches.

* * *

It is, therefore, possible to examine the work of the new Assembly on the assumption that it would not suffer for the quality of its new members. There can be no doubt that the Congress party will be preoccupied with a number of political questions connected with the inauguration of the New Constitution. It has come to the Councils pledged to fight the White Paper ; and though there have been some hints of late of material differences between the White Paper and the Report of the Joint Parliamentary Committee, there is no reason to believe that the rancour of the political issues will be abated for some time. Without underrating the importance of the political issues, we would, for our part, like to urge that the Congress Party should devote its attention to the rehabilitation of our economic policy. During the years in which the withdrawal of the Congress left the Government without an effective opposition in the Legislature, our economic policy, never clear-cut, has deteriorated into a worse chaos. The fiscal policy of India was formerly believed to be one of discriminating protection. The phrase was invented, to our knowledge, by the Fiscal Commission, the members of which generally retained their faith in free trade and accepted protection as an exception to a generally wholesome rule. Under this policy of discriminating protection India has endeavoured to nurse infant industries to their full natural stature ; and judging by the experiences of India and foreign countries and by the standards of the latter, the policy cannot be expected to draw to its close. The idea of imperial preference was scotched at the time. The fiscal policy may therefore be defined as free trade with a recognition of the truth in the famous infant industry argument, which, after all, is in no wise a violation of the essential principles of *laissez-faire*.

* * *

There is everything to be said for India continuing such a policy ; and we may add that, if the other countries would also pursue an identical policy in preference to the bilateral pacts, quotas and exchange restrictions, which are now so largely the vogue, the present deadlock of international trade would be ended and the world would move forward to a state of proper geographical distribution of production and an equitable international exchange. For such a policy would have all the advantages of international free trade, remove the obstacles that have in part caused and in part resulted from, the depression, and at the same time provide the correctives to the evils of ruthless international competition. By treating all foreigners alike it would remove a source of irritation in international trade relations; for it must be remembered that no nation has protested against the attempts of backward countries to

develop industries for which they are well endowed by nature. The experience of discriminating protection in India has on the whole been happy. Though at times the public and the industries have had occasion to protest against the inadequacy of the protection granted under this policy and the scope it has been afforded, there is no doubt that it has applied a useful brake on protectionist tendencies and prevented protectionism from running amok.

* * *

It is a matter for serious concern that a policy like this has within a few years been discarded. The insidious advance of imperial preference has undermined it altogether ; and we have now only the debris of discriminating protection. Discrimination there is, only in the sense familiarised by the agitation of British commerce in India—we discriminate between one foreigner and another. And as for protection, it is afforded to foreign, and not to indigenous, industry. The complications in our trade relations with Japan are to be traced in their entirety to the differential duties adopted in the Steel Protection Bill. And it is no accident that it is the British steel producers that have brought about the death of discriminating protection and enthroned in its place the principle of preference for British industry. The Ottawa Pact may well be deemed the turning point in the history of India's fiscal policy. It has proved a veritable Pandora's box from which many a fiscal evil springs to bring misery on the land. To justify an action taken primarily in the interests of Great Britain, Government are seeking to give it an apparently wider application and represent themselves as endeavouring to stabilise the foreign trade of India by means of pacts with the various countries of the world.

* * *

Sometime back we examined the economics of bilateral trade pacts and showed that India had nothing to gain by persisting in that line. Our arguments have been strengthened in principle by the results of Mr. Condliffe's survey of world economy, which we dealt with in these columns last week. The fall in the triangular trade, which was shown conclusively by means of statistics, is not a matter which a large trading nation like India can regard with indifference. Britain, too, as a nation with a large entrepot trade and a number of export industries, should benefit a great deal from the clear lead which India can give to the world in these matters. It is high time that both in the national interest and the interest of the world at large India should make it clear that she would not depart from discriminating protection, that, in other words, her fiscal policy is one of free trade modified—if modification it can be called—by no more than the requirements of infant industries.

* * *

From all signs, the Assembly will have occasion, as soon as it meets, to pronounce its views on this question. In a later article in this section we deal with the claim put forward by Lancashire to a trade treaty with India. That Lancashire is in a position to claim such a trade treaty in fulfilment of the "promise" of the Government of India is the tragedy of the whole position. And the only relieving feature is that the Government have shown themselves unwilling to settle such a fundamental question of policy without reference to the Legislature. Doubtless, the question will come up before the Assembly ; and it might well be that the proposals would be to the cotton industry what the Steel and Iron Duties Act is to the steel industry. It is to be hoped that the return of the Congress to the Legislatures will make a difference not only to the extent of defeating the particular measure, but of putting the fiscal policy of India again on sound lines.

LANCASHIRE AND INDIA

The danger of converting the fiscal policy from a matter of principle to a matter of bargain with each country is becoming increasingly apparent all over the world. And in India it is very much more, as the bargain is made for this country by others and extraneous considerations are often imported into the question of India's trade treaties. It is well known that even the Indo-Japanese trade agreement was inspired by the desire to make Britain's relations with Japan more cordial. And now Britain is urged forward by the Lancashire cotton industry to a direct trade treaty with India. The arguments advanced are interesting both in themselves and for the light they throw on the blunders of the Government of India in the past. Lancashire rests her case on the promises of the Government of India ; and it is, therefore, necessary to go fully into the antecedents of this question.

* * *

When the Ottawa Agreement was concluded between India and the United Kingdom, the question of preference to Lancashire cotton piecegoods was suspended in view of the Indian Tariff Board enquiry which was then proceeding. Afterwards the Indo-Japanese Trade Agreement, then under negotiation, intervened ; and last year's Lancashire Mission to India, in pursuance of the policy advised by the President of the Board of Trade and the Secretary of State for India that the British cotton industry should maintain closer contact and promote mutual understanding with Indian textile interests, came to no

decision on the question. A project of a trade agreement and preferential tariff treatment for Lancashire cotton goods has been framed by Lancashire on the basis of a letter dated October 25, 1933, addressed by Sir Joseph Bhore, the Member for Commerce and Industry, to Sir William Clare-Lees, Chairman of the Lancashire Mission, which said that "the Government of India will enter into discussions with His Majesty's Government in Great Britain on this point as soon as the negotiations now proceeding with the Japanese Government are concluded . . . . . and the Government of India recognise the natural wish of an export trade of such great importance to Great Britain to be included within the scope of the trade agreement which now exists between the two countries."

On November 1, a Lancashire Deputation met the President of the Board of Trade and, deploring the delay in fulfilling "a promise" made to the Clare Lees Mission, urged a trade agreement definitely stipulating maximum rates of duty on British piece-goods and minimum margins of preference. The Clare Lees Mission had laid down the broad lines of a scheme. The Mission suggested that import duties on United Kingdom cotton and artificial silk goods entering India shall be fixed from time to time at levels lower than those applicable to similar non-Empire goods and compatible, firstly with the revenue requirements of the Government of India and secondly, with the principle that United Kingdom producers shall have full opportunity of reasonable competition with home producers. In order to give effect to the second proposition, it would be necessary to provide machinery under which the United Kingdom Government could raise with the Government of India the question of re-examining the levels of duty, whenever they are able to show that these levels were unduly high, having regard to the agreed considerations affecting them.

* * *

In pressing for a more precise expression to these proposals in the form of a definite stipulation of maximum rates of duty and minimum margins of preference, the Lancashire Deputation has gone beyond the orbit of the Clare Lees Mission's scheme and raised important constitutional issues. Lancashire recognises the revolutionary character of the stipulation and hedges by asking for the immediate acceptance of a trade agreement, provided it acquiesces in the claim put forward by the Deputation to impose Lancashire's will on India's fiscal policy. On this basis the Deputation made out a case for a reduction in the duties on United Kingdom cotton goods, declaring that in recent years protection against United Kingdom goods had been too high, and that the Indo-Japanese Agreement has not, and will not, operate in favour of Lancashire. The Deputation urged the British Government to remind the Government of India of the very considerable benefits already obtained by India from the Ottawa Agreement.

* * *

Strange as this talk of the benefits of Ottawa might sound in Indian ears, it is, nevertheless, useful to repeat the arguments adopted by Lancashire. As an exporter of primary products, the Deputation argued, India derives enormous advantage from the secure and stable market she enjoys in the United Kingdom, in sharp contrast to the restrictions being raised against her exports by many foreign countries who were formerly her important customers. On the cotton goods platform alone, the balance of advantages up to the present time is all in India's favour. The Lancashire mission promised to take action regarding Indian raw cotton, and to recommend that colonial quota regulations should give Indian manufacturers equal chances with the United Kingdom producers. Both these promises, Lancashire contends, have been fulfilled already, and to the letter. In return, the Mission secured approval for the principle of differential duties on British and foreign goods and for modification of the duty on yarn and artificial silk, and conditionally on cotton piecegoods, together with the promise of a new trade agreement.

Mr. Runciman was, of course, much impressed with the case submitted and assured the Deputation that their case would be carefully considered.

* * *

Trade statistics show that far from very considerable benefits having accrued to India from the Ottawa Agreement, this country has suffered a serious shrinkage of its trade with other countries. Taking the two fifteen month periods (January, 1932, to March, 1933, and January, 1933, to March, 1934), India's adverse balance of trade with the United Kingdom rose from Rs. 9.3 crores to Rs. 10.3 crores. India's balance of trade with non-Empire countries is substantially in her favour—the balance jumping from Rs. 1.3 crores to Rs. 5.4 crores during the above-mentioned periods when the Ottawa Agreement was in operation.

* * *

As a result of the Ottawa Agreement the United Kingdom's sales to India have increased proportionately more than her purchases from India, while non-Empire countries, despite fiscal discriminations, have continued to buy proportionately more from India than they are selling to her. India's apprehensions about the re-actions of the Ottawa Agreement are borne out by statistics. The Indian Trade Commissioner at Hamburg recently commented on this aspect of India's trade with the Continent of Europe and Dr. Meek's analysis suggests a similar alignment. In face of these facts and figures, it is curious that the Lancashire Deputation should suggest that the concession which they seek from India is but a legitimate *quid pro quo* for the benefits of the Ottawa Agreement. The best

that could be said of Ottawa is that it has still two sides of the account ; but its capacity to harm the trade of the country is beyond question.

* * *

For our part we would hardly argue any question of trade pact in the future. For we are convinced from our study of both Indian and world trade, that the vogue of bilateral pacts is calculated to do the greatest harm. But in the present instance, as we have hinted earlier, there are other constitutional and political issues which far surpass the economic issues in importance. It is inconceivable that the right to ask for periodical revisions of tariffs could be secured under a mere trade treaty. Nor can this country guarantee for ever a permanently lower level of tariffs on British goods or accept the principle that importers are entitled to effective competition with indigenous producers. Above all, no crucial question such as those involved in the proposals of the Lancashire Delegation can be settled by the Government all on their own responsibility. With a new Legislature being elected, with the popular party known to be opposed to these violent interferences with the natural channels of our foreign trade, it would be unconstitutional, even under the present standards of the Government of India, to decide these questions without consulting the Legislature. As for what the Legislature should do, we have, happily, had to deal with it in the leading article of this issue.

MR. RUSSELL'S READING OF HISTORY

The century that passed between the end of the Napoleonic and the beginning of the Great War is, assuredly, the period of the greatest consequence to the future of the human race. For vast potentialities for good and evil alike developed during this period, at a rate which almost induces an attitude of fatalism in more thoughtful men. Standing to-day amidst the vast wreckage of political institutions and economic order, and, most of all, a chaos of ideas and values in every sphere of human endeavour, with a bitter disillusionment of the high hopes of peace which the end of the Great War induced, the need for interpreting the most consequential period of human history is beyond doubt. But how many of the professional historians or the avowed theorists have shown themselves competent to interpret this, or for the matter of that, any period of history from the broad standpoint of the good of the race ? It is notorious that history is not a science. But what is worse and even less known is that historians are not scientific. That history is not a science is often regretted more than that historians are unscientific. It were well if historians recognised that history can acquire, if ever, a scientific character only by their preserving a scientific attitude. This is less difficult in the physical sciences where one starts with less of unconscious preferences for particular conclusions. The worker in the social sciences has a mind which is always a bundle of prejudices ; and the more unconscious a prejudice, the more devastating it is on the reasoning and on the conclusions. History is even worse than any social science. For the value of historical facts lies in their interpretation. And in so far as interpretation is a subjective valuation, choice of facts is inevitable. Certain facts have to be placed in relief, a few relegated to the background and many rejected on the ground that they do not fit into the framework of one's theory. The facts of human life never present themselves in a form which will admit of the formulation of cut and dried theories ; and theorising in human affairs, therefore, necessarily involves the rejection of facts, on the ground not of irrelevance, but of inconvenience. By reason of its having to discard objectivity at a stage, history can never be a science. And there is no reason for regret in this or, in what amounts to the same thing, the necessity of frequently re-writing history. Each age has its major interest ; and it is quite justified in trying to read history as a progression in that particular line. It might be nationalism at one time, internationalism

in another view or it might be, as it was with Karl Marx, the free play of the economic forces. The fault of these different studies lies in imagining a part to be the whole and in overlooking the fact of over-simplification. It is like the magnifying glass which helps to see certain features more clearly, but should not be allowed to obscure the proportions in reality.

* * *

It might be said that the test of human progress is the extent to which a synthesis of the various readings of history is possible. When we are able to see the forces and factors in history in their proper inter-relation and in their relative strength, not only do we perceive truth in history more clearly, but we shall also have gained knowledge essential for reconstruction of the future under favourable circumstances. To what extent such a synthesis is possible now, it is difficult to say. But that such synthesis is needed to-day more than at any earlier period may be ventured with fair confidence. For the major currents of history have, unquestionably, reached a high stage of development. Nationalism, to the birth of which in the Napoleonic period people looked as to a new Messiah, has not only reached its manhood, but entered its dotage. Democracy has had more than its chance, that is, within the limits conceived by the Liberals of the Nineteenth Century. The technique of economic production, which was hardly less of a Messiah in the eyes of Liberals than Nationalism, has reached a perfection of which the people of the Industrial Revolution could have had but a vague idea. The forces set afoot by these three have had a riotous freeplay ; and in the wake of the resulting confusion was born a new internationalism, which in inspiration was free of the older theological bias and recognised its justification in practical necessity. The hopes kindled by such internationalism have also been blasted. Perfection of productive technique has wrought a vengeful chaos in human economy. The antagonisms of nations have been stirred up ; and again they threaten to flare up in a big blaze. At such a point in human history, the need for the synthesis is the greatest ; and the period which calls for such study is the one which has handed all this chaos to us as its rich legacy.

* * *

This formidable task has been essayed by Mr. Bertrand Russell in his latest work, *Freedom and Organisation 1814-1914*.* He described it in the Preface as "an attempt to trace the main causes of political change" during these hundred years ; and they are, as they appear to him, economic technique, political theory, and important individuals, to which he adds the element of chance, which only an over-simplification of historical issues can altogether eliminate. None of these can be ignored or explained away as the effect of other causes. Except the element of chance which by the very hypothesis is accidental, the others have their inter-relation. The developments of economic technique change the structure of classes and the economic interests of each of them. Economic interest enters into political theory and political theory to some extent colours the attitudes and politics of important individuals. In such a view, it would be difficult to see any party or individual as the embodiment of zeal for disinterested reform or as demons for self-aggrandisement. Those, who shape the destinies of nations and affect the welfare of mankind as a whole, are not noted for a fierce self-introspection. They conceive theories in the formulation of which the first impetus is derived from self-interest. And they develop, where the objectives are not frankly religious, the zeal of a crusader. Those, who are familiar with the earlier writings of Mr. Russell, can guess that he gives a large place to the tendency of men in every station to give to their own self-interest a high ethical value even from the standpoint of the world at large. This self-deception is most clear in the case of religious men ; and when they happen to be monarchs they become great forces in history. But the distinctive mark of the Nineteenth Century is that traders and manufacturers were taught to believe that the relentless pursuit of their self-interest is the greatest factor in the well-being of mankind. The wonder of history, which is not without its pathos, too, is the way in which the shallow philosophy of Liberalism fitted the conditions of the times. Both nationalism and laissez-faire industrialism had a glorious run before their sinister possibilities could be divulged. Even to-day there are large sections who are not fully disillusioned.

* * *

The inadequacy and one-sidedness of each political theory, even in the times in which it was most appropriate, is the one great lesson of Mr. Russell's treatment of the Nineteenth Century. The great makers of history seem as ignorant, selfish children putting on the airs of wise and benevolent statesmen. It is, to our mind, the mark of Mr. Russell's later works that with riper understanding moral indignation has given place to dispassionate presentation with a tinge of mild sarcasm. A few of these delicate perfumes, whose aroma spreads over the whole volume, would not be out of place. The opening paragraph is itself a fair sample :

> Idealism is the offspring of suffering and hope, and therefore reaches its maximum when a period of misfortune is nearing its visible termination. At the end of a great war, men's hopes fasten upon one among the victors as a possible champion of their idealistic aims. After the fall of Napoleon, this role was offered by popular acclamation to the Tsar Alexander, and was by him accepted with alacrity. It must be said that his competitors for ethical supremacy were not morally very formidable. They were, among sovereigns, the Emperor Francis of Austria, Frederick William of Prussia, the Prince Regent, and Louis XVIII; among statesmen, Metternich, Castlereagh, and Talleyrand.

Metternich, Mr. Russell characterises as one

> . . . . who was left in charge of foreign affairs as soon as he had taken well to heart that all change was unwelcome to his master. Relieved of external responsibility, Francis was free to concentrate upon the more congenial task of regulating the internal

Standard Buildings, 32, Dalhousie Square, Calcutta.

administration of his Empire. The judicial system was so centralized that the details of the most trivial prosecutions came to his notice, and, having a taste for such matters, he interested himself even in the conduct of executions. He rarely revised a sentence, and never exercised the prerogative of mercy.

On George III and the Prince Regent, he is almost savage:

George III, after losing the American Colonies and forbidding Pitt to introduce Catholic Emancipation, had been belatedly certified as insane, but was still King of England. His functions were executed by the Prince Regent, an elderly beau, much ashamed of his corpulence, but too greedy to take any steps to cure it. Politically, the Prince Regent stood for all that was most reactionary; privately, for all that was most despicable.

Mr. Russell depicts Talleyrand as all students of history know him, and observes at the end:

Undeniably he was a scamp, but he did less harm than many men of impeccable rectitude.

Dealing with the limitations of the principle of nationalism, he brings out the delicious humour in old world ideas:

One limitation of the principle was that the area concerned must not be very small. Another was that the area must not be in Asia or Africa; this was clear to all right-thinking people until the Japanese defeated the Russians. Yet another limitation was that the area concerned must not be one of exceptional international importance, such as Suez or Panama.

Again,

Nationalism in its modern form began in England in the time of the Tudors, being invoked by Henry VIII in religion and by Elizabeth in commerce. It was made holy by Protestantism, glorious by the defeat of the Armada, and profitable by overseas trade and the loot of Spanish galleons.

He holds Fichte up to deserved scorn in one short remark:

"We must make the pupils indifferent to their material welfare, and mould men who are inwardly and fundamentally good, since it is through such men alone that the German nation can still continue to exist." This, aparently, is the sole reason for preferring good men to bad ones.

* * *

It is futile to try to exhaust these gems. To students of Russell they are nothing very new ; to others they are wellnigh incomprehensible. But they give an idea of his view of history. All his life he has condemned the common types of historical works, colourless chronicling, glorification of nations at the sacrifice of truth, historical theorising through over-simplification of facts, neglect of the part played by important individuals and confused notions of the relation between political theory and historical trends. All these defects, Mr. Russell has avoided with that tense grip on facts and logic, of which hardly any other has shown himself capable to the same degree. It is difficult to epitomise a thesis out of so realistic a treatment. One can only say that it affords the best insight into what has come to be called Nineteenth Century optimism, a comfortable belief in inevitable progress, and the best understanding of how it came to be dissipated. In the present position hardly anyone dares to hope. But the thoughtful are not preys to pessimism. They recognise that progress is far from an inexorable natural evolution and that if human civilisation is to survive, men have to work hard with true undertanding and vision at the economic and cultural reconstruction of the world.

BOMBAY'S MUNICIPAL BUDGET

The Bombay Municipal Corporation, much more than its sister institution in Calcutta, is passing through an ordeal of financial stringency. The Budget estimates for 1935-36 show a closing balance of a little over four lakhs of rupees, on the assumption that the Local Government would approve of the proposed extension of the currency of the Development Loan. The income for next year is estimated at Rs. 3,16,04,000, including extraordinary receipts transferred from accumulations, which total Rs. 18,53,000. This expedient for balancing the Budget has been perforce adopted by the Corporation owing to the lack of response from Government to the repeated requests of the Corporation for an alternative source of revenue to make good the loss of the cotton duty. The controllable expenditure of the Corporation which in 1934-35 was shown as Rs. 1,25,05,000 has been reduced to Rs. 1,18,60,000 in 1935-36. Large economies are said to be "impossible without a drastic curtailment of public services already inadequate to the needs of the city."

* * *

The Corporation's financial position is likely to have unfortunate reactions on primary education. The Municipal Commissioner recommends the restoration next year of the cut in salaries, which would reduce the budgetary closing balance from Rs. 4,000,000 to Rs. 2,22,000, on the analogy of the pledge of the Government of India to restore the balance of 5 per cent. cut in the salaries of Government employees. In the Budget for 1934-35 the Bombay Municipal Corporation drew attention to the reduction from 10 to 5 per cent. of the cut in the salaries of Government servants and remarked that some relief to Municipal employees, who had "volunteered" temporary cuts in their salaries was called for. Government were not able to offer the relief suggested and its renewal in next year's budget commitments is reinforced by the reduction in interest charges on advances taken from Government and the extention of thirty years of the currency of the Development Loan. A parity as between Government and semi-government services in the matter of wage retrenchment "cuts" is morally obligatory, having regard epecially to the loyalty of the Bombay Corporation's employees in foregoing voluntarily a moiety of their salary. The Commissioner has allocated in the Budget thirty lakhs of rupees for primary education and, if precedent is followed, this sum will not be forthcoming, though it is hoped that a sum as near it as possible will be released. Financial stability has rigid limitations ; and no one will charge the Bombay Municipal Corporation with civic lapse if its revenue circumscribes its welfare work. At the same time it is pertinent to suggest that all legitimate economies should be explored before "axing" primary education and the subordinate staff.

JUTE MILLS IN CUBA.

The New York Correspondent of a local contemporary, writing on October 11, states that the Cuban Government have passed a Decree which sets up a virtual State monopoly in regard to jute, hessians and gunny bags. For the year ending June

30, 1935, the importation into Cuba of gunny bags and hessians will be restricted respectively to 25 million pieces and 7 million yards. Thereafter under the necessary tariff protection, mills will be created in Cuba and direct exports of raw jute from India will be encouraged without duty.

* * *

Hessians and gunny bags are largely used in Cuba for wrapping up and packing tobacco, which has a world-wide reputation for the blending of high quality cigars. The establishment of jute mills is part of a compredensive scheme "to restore the economic life of the nation profoundly shocked after the enormous political and economic crisis which the country has been experiencing."

* * *

Every company, concern or person that may be engaged in the manufacture of hessian and gunny bags will be granted for one year complete exemption from custom duties on imported jute mill machinery, on condition that the company, concern or person shall satisfy Government that the machinery is to be installed exclusively for the manufacture of jute bags and hessians. These pioneer firms are also exempted from Municipal taxes for five years.

* * *

At present Cuba imports her jute bags and hessians requirements from North America which buys both from Calcutta and Dundee. For her raw jute Cuba will have to rely on Calcutta ; and the development of this market will give a much needed stimulus to the depressed prices of the material. The voluntary jute restriction scheme, on which the Government of Bengal is expanding much energy and even some money, will, doubtless, consider this new element in the position. South American Republics are not remarkable for political stability, revolutions coming and going with recurrent rapidity. Cuba has gone through, in the words of the President, "enormous political and economic crisis" and the Cuban Cabinet's decision to organise a new industry to relieve unemployment is a notable departure from economic ways of the South American Republican.

LENA GOLDFIELDS

Soviet-Russia's re-entry into the international comity of nations has, among other re-assuring reactions, led to a settlement of the long drawn out Lena Goldfields dispute, according to Moscow reports reproduced in The Statesman. When Lenin put into operation his economic policy in 1925 he invited foreign capital to develop post-Revolution Russia. In pursuance of that policy the Soviet Government granted a concession to the Lela Company which covered full rights to mine and prospect in Eastern Siberia, the Ural Mountains and the Altai area. The Company was in existence during the Czarist regime and under the Lenin concession handled about 30 per cent. of Russia's gold production, 80 per cent. of silver and 50 per cent. of copper, lead and zinc, with £3,500,000 (British capital).

When State capitalism and the Five Year Plan replaced Lenin's economic programme the Lena Company was subjected to planned harassment. Its contractual right to sell its output to private parties as well as Government was rendered inoperative by making private purchase of metals punishable with death and the Soviet Government by manipulations of currency made selling to the State unprofitable. On the arrest on a charge of espionage of the Company's foreign staff, which effectually closed the Company's work, an appeal was lodged with a Court of Arbitration, with Professor Otto Stutzer of the Freiburg Mining Academy as Super-Arbitrator, a nominee of the Lena Company and a representative of Soviet Russia. Then followed a peculiar course of Soviet action. At the last moment the Soviet representative was withdrawn on the plea that the closing down of the Company automatically cancelled its concession, though the original contract could be cancelled by the Arbitration Court only, which in September, 1930, found that the Lena Company was entitled to approximately £13,000, as compensation from the Soviet Government.

The repudiation of this finding by Soviet Russia evoked strong protest in the House of Commons; but the first Anglo-Russian Trade Agreement, engineered under a Labour Government, was too pro-Russia commercially to induce the liquidation of British share-holders' capital in the Lena Company appropriated by the Soviet Government. In the Trade Treaty recently concluded it is specially provided that its continuance on the British side would depend on a satisfactory settlement of the Lena Goldfields dispute. A settlement in terms of the Arbitration Court's award has been reached which, though it does not cover the Company's losses, reimburses in part the Company's share-holders.

NATIONAL INDIAN LIFE INSURANCE CO., LTD.

RESULTS FOR 1933-34

From the report of the Directors of the above Company for the year ending 31st December, 1933, it is pleasing to note that during the year there was a completed business of Rs. 24 lakhs which shows an increase of Rs. 5½ lakhs or about 30 per cent. as compared to the previous year. This amply proves the popularity of the Company and confidence in Messrs. Martin & Co., their managing agents.

* * *

The premium income of the Company was over Rs. 7½ lakhs showing an increase of about half-a-lakh over last year. The total income was over Rs. 10 lakhs. During the year the expense ratio decreased by 1 per cent. which now stands at 36 per cent.

* * *

In spite of the continued fall in the rate of interest on investments the Company have been fortunate enough in improving the net yield on their investments from 5.79 to 5.82 per cent. It may be noted that the investments of this Company have been made on the soundest lines and the market value of the securities exceeds the book value by about Rs. 2¼ lakhs. The total assets of the Company are now in the neighbourhood of half-a-crore of rupees.

Further, there is an investment reserve amounting to Rs. 70,000.

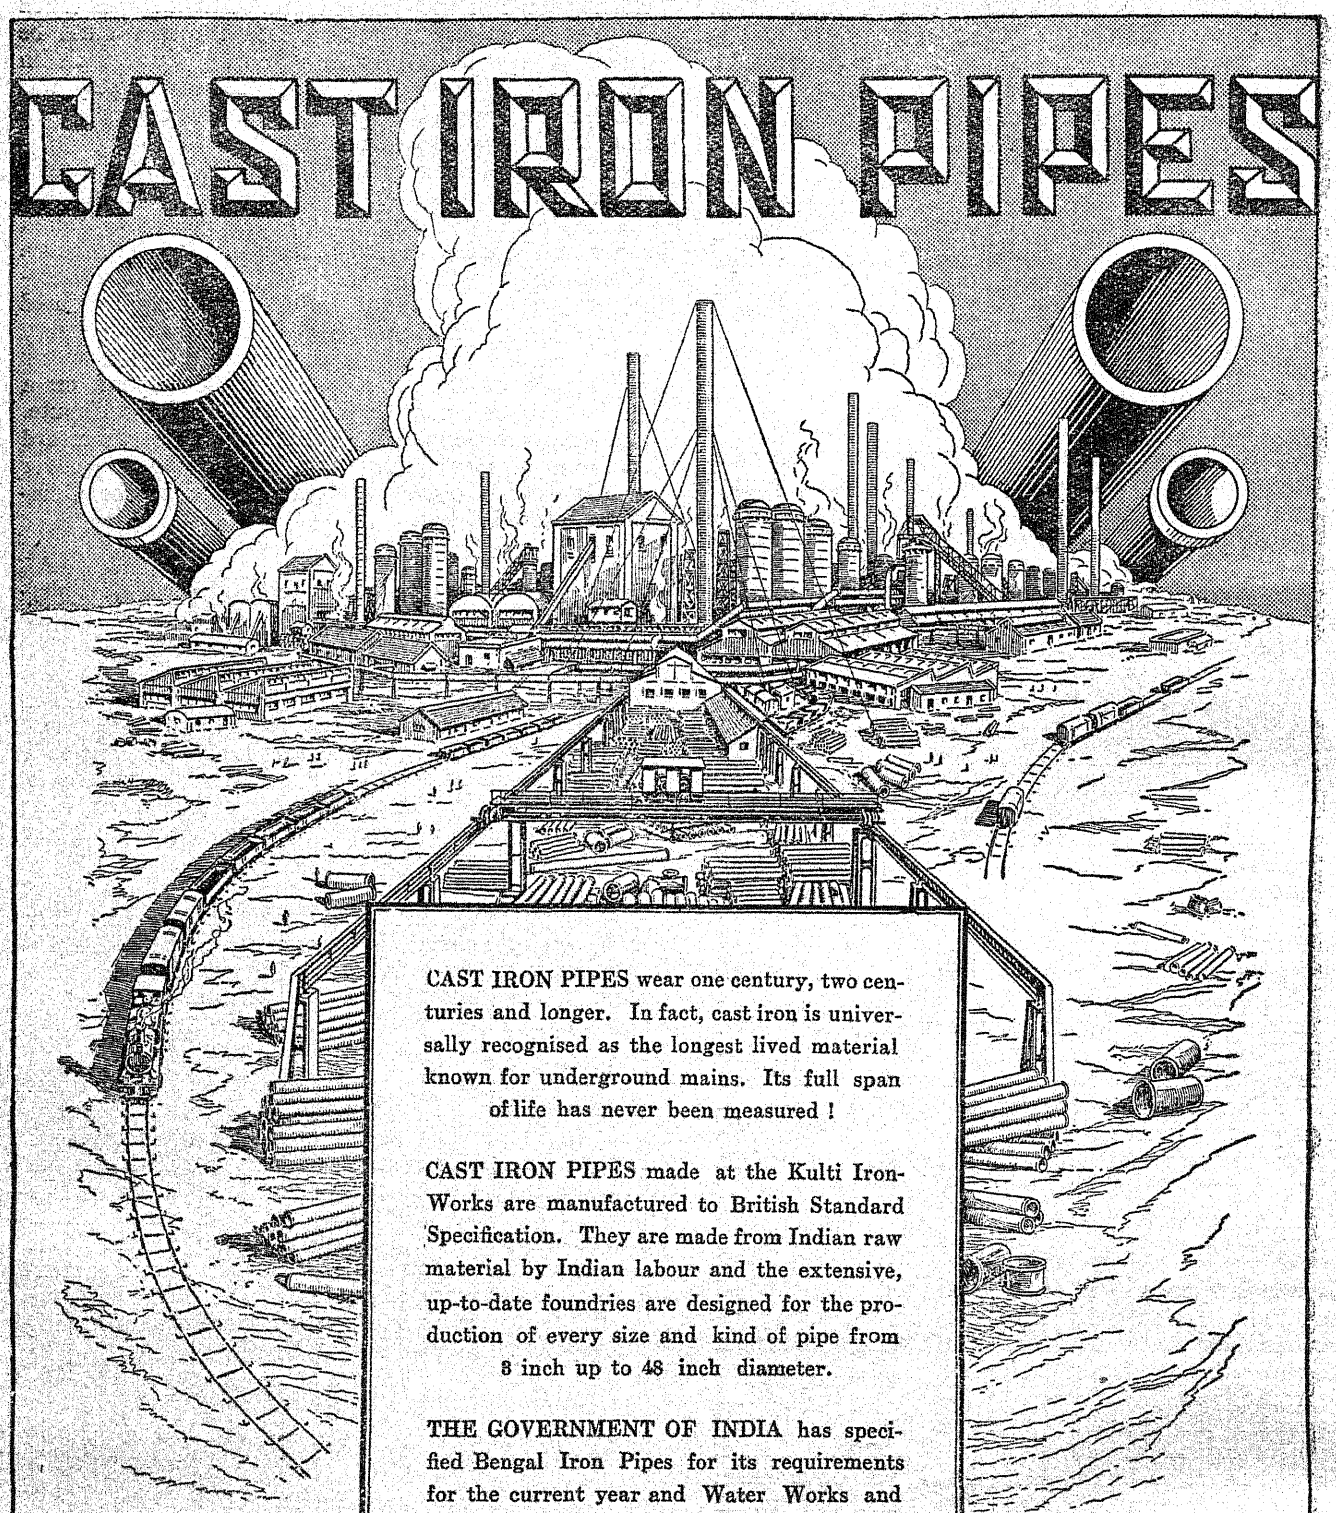
CAST IRON PIPES



CAST IRON PIPES wear one century, two centuries and longer. In fact, cast iron is universally recognised as the longest lived material known for underground mains. Its full span of life has never been measured !

CAST IRON PIPES made at the Kulti Iron-Works are manufactured to British Standard Specification. They are made from Indian raw material by Indian labour and the extensive, up-to-date foundries are designed for the production of every size and kind of pipe from 3 inch up to 48 inch diameter.

THE GOVERNMENT OF INDIA has specified Bengal Iron Pipes for its requirements for the current year and Water Works and Drainage Engineers will find that they ean obtain all their needs from the same source.

CAST IRON :
Manhole Covers ;
Surface Boxes ;
Sluice Gates ;
Gully Traps ;
Bollards ;
Sleepers ;
Culverts ;
Water Cranes ;
Chairs ,
Spur Wheels ;
Bearing Plates ;
Firebars ;

CAST IRON :

London: October 26.

The Stock Exchange fraternity is, I suppose, the same all over the world. There is a commonness of psychology amongst market jobbers whether the scene of operations is Wall Street or Throgmorton Street or Dalal Street. Rumours and reports reach them from God knows where. And they look at the world, on all occasions, through magnifying glasses. It is as though all news for them is only in flaring headlines. Scaremongers, naturally, find them easy victims. I wonder if a stockbroker reads anything more than the featuring main heads in his daily paper. The *Daily Mail* came out yesterday with a blood-curdling banner-line: "Surrender of India." This was sufficient to cause uneasiness in the market for India sterling stocks ; and while, under a hundred and one bullish influences, British Funds registered further advance and established yet newer records, India stocks turned easier and shed a few shillings. If only the panic-prone operators cared to read and analyse the column and a half of the story, which supplied it with the title, they would have realised that yesterday's stuff was no more than a rehash of what had appeared on umpteen earlier occasions towards the same end of denying all or any progress to India. As a matter of fact, I hadn't myself seen the article till early in the afternoon when, on looking in at the Imperial Bank here, Mr. Birrell asked me what I thought of the *Daily Mail* stunt. Seeing me blissfully ignorant, he sent for a copy of the issue and made me read it. At the end of which I asked him if it was anything new. But the market thinks otherwise, said Mr. Birrell. And, true enough, $3\frac{1}{2}$ per cent. India sterling paper receded on a day when it should have actually registered a substantial rise.

We are advised by Lloyds Bank Limited that the Report contained in "Clive Street Gossip" of our issue of November 3rd, 1934, regarding the arrangements with the Imperial Bank of India is wholly incorrect. We regret the annoyance we have caused to Lloyds Bank by the Report and gladly afford full publicity to their contradiction.

Except that the technical position of the market for our sterling securities is such that they are firmly held by *bonafide* investors and investment institutions, that the floating stock is but meagre, and that there cannot be much of speculative sales owing to the difficulty of securing scrip, the *Daily Mail* and *Morning Post* between them could have wrought havoc. It is curious that, in all this controversy, it is not the businessman or the financier but the politician who figures prominently. I have met quite a few of the important City people, principally those who are connected with Insurance concerns and Trust companies, who, compelled by the dwindling yields on British investments, are carefully and constantly examining possibilities of putting out a portion of their funds in such countries of the sterling area as have their finances on an undoubtedly firm basis. From this point of view, India has come to appeal to them greatly ; and they have already taken a fair amount of interest in the shares of selected Indian industrial concerns. The future of cement, sugar, steel and paper industries in India is looked on by these investment institutions with a measure of confidence. There is a steady, though yet small, stream of investment funds flowing from London into such industrial scrips.

The question which the authorities of the Insurance and Trust companies have been asking me is not whether the White Paper would imperil or jeopardise British investments in Indian securities, but whether there was any risk of their losing a portion of their rupee capital by depreciation of Indian currency. The City is not worried over India's financial strength in the future. It sees India, like Australia, recovering her credit both at home and abroad in rapid strides. It sees no possible impediment to the continuance and strengthening of that recovery. But it wants to know whether India, like Australia, will have recourse to currency depreciation as an aid to accelerate improvement. If the City interests are assured that they need have no misgivings of loss through change in the ratio, there will start a steady outflow of funds into Indian securities. "What, do you think, India will do about the ratio ? Is the ratio safe ? Will India's politicians, when they come to power, seek to alter it?"—these are some of the crucial questions which I was constantly asked to explain. The safety of the ratio is, I said, assured so long as there are gold exports from India. How long these gold shipments would continue, I could not say. In any case, no change will be made or can be made light-heartedly. And to talk of Indian politicians coming to power is meaningless as the safeguards devised leave very little or none, so far as currency matters are concerned. As the scheme is now devised, it is the British authorities who will have a real say.

I admitted to one and all that, so far as I was concerned, currency depreciation was inevitable. But the real point is that the power to effect it will continue to rest with the British authorities and not with Indian politicians. It may well be that the logic of events

drives the authorities to take a step which is now so repugnant to them. But, even so, what British investors in rupee securities might lose by currency depreciation, they would more than make up by a flare in prices which that very depreciation would kindle. In any event, no one who makes a wise selection of rupee scrips will have any cause for regret.

There is another interesting point which came out in these discussions. When, during the years 1923-1928, the world-wide movement was in progress for the re-establisation of war-wrecked currencies on a gold basis, the Economic Committee of the League of Nations popularised a definite technique. This was wholesome and acceptable to scientific canons of economics, so far as it went. But subsequent events have proved that it did not go far enough. The technique as then devised was as follows:—

1. Balancing of the National Budget.
2. Adoption of gold exchange standard rather than gold bullion standard.
3. Establishment of a central banking institution to look after, and work, that standard.
4. An external credit to enable the country in question to get through the first two difficult years unscathed.

It will be seen that this programme did not pay any attention to the technique of exchange parity. In fact, a kind of superstition was prevalent that to go back to the pre-War parity of exchange was the triumphant token of re-established national finances. There was, at that time, but little recognition of the fundamental importance of exchange parity in the very stability of the new currency plans. Where possible, nations bragging of financial puritanism adopted old parities and looked for applause from the rest of the world. Even those countries, which were not bothered by this futile superstition fixed the new parities not on a scientific appreciation of the essential national factors in relationship to international factors, but in a kind of haphazard, arbitrary, and guess-what-you-can fashion. More than anything else, it is this slipshod understanding of the place of exchange parity in the working of a currency standard, that is principally responsible for the breakdown, in less than a decade, of the currency systems planned with intelligent and powerful support, and on a world-wide extent.

The last two or three years have made all thoughtful men realise that this question of exchange parity must now be studied with greater care and the new technique evolved with less dogmatism. The world has just perceived the value and necessity of such a study. The study itself has not progressed far. While this is the case, who will be so fool-hardy as to lay down the law on the question of the future parity of the rupee? But one thing is obvious. It has now been proved that currencies linked to gold on pre-war parities were shattered because they were over-valued. What are we to say of a currency which was stabilised in terms of gold not on the pre-war ratio, but on a 12½ per cent. over-valuation?

I am tickled to find that comments in the London press on the lessons of the Air Race have followed the lines adopted in my last week's gossip. The average Britisher is in no mood to rest on the laurels of this aerial Olympiad ; and it is, perhaps, the best trait of the British character to look for defects in moments of triumph, when other folks would be overcome by complacent contemplation of superiority. It is true no one underrates the achievement of Messrs. Scott and Black, but no one overlooks the adverse implications of their outstanding success, namely, that the achievements of the British in the sphere of commercial flying are far short of the potentialities as they have been made clear by the Air Race. A writer in *The Times* pleads earnestly for a better British air policy for which the British victory offers a new chance. The lessons of the Air Race are set down by him with admirable clearness. In the first place, though the winning machine was especially designed for racing, it is not a freak ; and with trivial modifications, such as, for instance, the reduction of the range from 2,900 miles to 1,000 miles, it could serve as a mail carrier, which means that a regular air mail service to Australia is not only practicable in itself, but practicable at hitherto inconceivable speed. The magnificent performance of the Dutch Pilots shows that "we can anticipate not merely a kind of Post Office air tube but a regular passengar-cum mail service like an air train." In the face of these possibilities, an imperial subsidised service contemplating the use of 100 miles per hour aircraft becomes an anachronism galling to British pride. The United States has been running for years an air service at a speed of over 200 miles per hour. The Dutch have maintained a service to and from Batavia which takes five days to reach that place. A combination of high class pilots with high class machines, together with the provision of flood-lit landing grounds, special wireless arrangements and other necessaries for night flying could enable the British to make up the leeway in commercial flying. Thus the British triumph in the Air Race has led to wholesome introspection ; and the result is the announcement that the Air Ministry is to finance civil aircraft firms who are willing to turn out mail and passenger carrying aeroplanes, comparable with the

American liner entered with such amazing success by the Dutch Government in the London-Melbourne Air Race. The British air experts, who met during this week, are firm in their resolve that within the next few months this country must run a seven-day air route to Australia.

In these world developments I and my readers have a close personal interest. I referred last week to the unfortunate dispensation under which, despite a news gets stale by the time it is served out to the public. It is not merely a somewhat technical interest large outlay on the air mail packets, our menu of in latest news. As it is, we in the office of *Indian Finance* suffer from a serious diability regarding the appraisement of the position of finance abroad. The week, which each issue covers, we try to understand on the basis of the reports received up to Friday, which are necessarily incomplete and scrappy. For the air mail week, we get the complete accounts of London financial journals. In between is a week, which in the present phase of rapid and sensational upsets in international finance may well be called a dark age. That light will be thrown on this dark age by the flood lit aerodromes is a gain which I, for my part, would rate higher than anything yet claimed for the recent air race.

It has been a hectic time in London since I arrived. First the Air Race ; and now the activity in the Stock Exchanges. It is not yet in full swing ; but I can see that great things are expected, used as I am to watching and feeling the pulse of stock markets. The prelude to the coming stir is furnished by the figures of new capital issues in October. The Midland Bank has just published its compilation, and October shows a record for the last four years of £23,446,000.

It compares with £6,748,000 for the previous month and with only £10,026,000 in October, 1933. The previous highest monthly total for the current year was £22,441,000 in May. As a result of the activity in October the aggregate total for the current year now shows a substantial increase over the corresponding period of 1933, the respective figures being £124,092,000 and £113,729,000. The bulk of last month's issues were on behalf of domestic borrowers, home issues accounting for £20,764,000. Practically the whole of the balance was for oversea countries within the Empire, the amount lent to foreign borrowers being negligible. Figures like these point distinctly to the prospect of great activity in the security markets.

"EAVESDROPPER".

FINANCE ABROAD

(*Continued from page 1211*)

position has the same security and the large discounts of forward Belga make it clear that the future of the Belgian currency is vested with grave alarm. It is a matter of common knowledge that the problems of Belgium are similar to those of France, with the difference that France has the resources with which to maintain her currency, while Belgium would need external help. It is in consideration of this that Belgium delegates expected France to promise definite help to her duirng the deliberations of the Gold Bloc Conference. The Belgian Government have not as yet shown the same determination to balance the budget and maintain the currency as M. Doumergue had in the case of France. Close on the heels of the Franch crisis and establishment of M. Flandin in the French Premiership comes the crisis in Belgium. The latest news is that the Belgian Cabinet has resigned. It is sad that America now regards herself as the centre of the Gold Bloc countries and that she is now in a mood to render such help as the Gold Standard countries might need. But it must be remembered that the interest of America in the Gold Standard is the interest of a country which is anxious that as many other nations as possible should continue on currency with a high exchange value. There can be no mistaking the extent to which the conflict of interest can be overlooked. Though America is for the moment believed to have postponed her schemes of inflation, she is far from being done with them. Apart from the various plans in the Government, there is one subtle process of inflation which continues all along and which must take effect in the long run. We refer to the process of inflation set afoot by the deficit in Government expenditure, when Government deficits are financed by loans from banks. For the Banks which take up Government securities issued to cover the deficit pay for them by means of deposit credit. The increase in the volume of balances would, when the time comes, have its inflationary effect. There is also the case of Japan where the Ministry of Finance has announced its decision to continue the policy of "sound inflation." In the face of these developments it is doubtful if the gold standard countries can maintain their currencies.

CLEARING BANKS IN LONDON

(*Continued from page 1244*)

But from 1931 to 1932 there was a steady decline in business which led to the decrease in clearing totals. In 1933 there has been a slight improvement, .07 per cent. over the amount of 1932 ; and it is hoped that it will be maintained during the current year. In the Country Cheque Clearing, however, there has been a decided improvement over 1932 and the turnover shows an increase of £98,552,000 or 3.6 per cent. The figures of the Town Clearing are not a clear guide in ascertaining the existing trade conditions of the country, in as much as a very large percentage of the turnover is the outcome of purely financial transactions. In the Metropolitan Clearing there was an increase of £46,268,000 or 2.8 per cent. as compared with the amount of 1932.

In addition to the London Clearing House there are eleven Provincial Clearings, namely, Birmingham, Bradford, Bristol, Hull, Leeds, Leicester, Liverpool, Manchester, Newcastle-on-Tyne, Nottingham and Sheffield. Of these, the turnover in Birmingham, Liverpool and Manchester were the largest.

The combined totals of the eleven Provincial Clearings for 1933, £1,243,076.000 discloses an increase of £4,920,000 or .3 per cent., when compared with the aggregate for 1932.

Apart from the Town Clearing, a large percentage of which is the outcome of financial operations and, therefore, not a true criterion of business conditions, there has been a welcome increase in the volume of clearings passing through the Metropolitan, Country and Provincial Clearings. These indicate that trade conditions in Great Britain have improved to some extent. At least it can be said that the downward trend has been arrested. But no country by itself can bring about a revival of trade, unless business conditions improve in other countries. No such sign is visible yet. On the contrary, restriction of trade, whether by imposing higher duties or by exchange restrictions is making exchange of commodities a matter of greater difficulty. Britain has discarded her traditional free trade policy and has imposed protective duties which tend to grow higher and higher. It would seem that for the time being the British policy has to some extent succeeded. Whether this favourable position will be maintained in the future remains to be seen.

OLYMPUS

(FROM OUR CORRESPONDENT)

New Delhi, 12th Nov.

Mr. J. B. Taylor has occupied his old room in the Imperial Secretariat and has returned to the duties of the Special Officer. He will be more than a Special Officer for some time, at any rate. He may discharge some of the duties of the Secretary. This is because he is well up in all the affairs of the Department and Sir James Grigg is likely to seek his assistance in spheres other than those pertaining to the Reserve Bank.

* * *

Mr. Tallants, the new Finance Secretary, will also feel relieved to share his duties with Mr. Taylor. Mr. Tallants is a very capable official and is very painstaking. He has already impressed people as a thorough official and is personally very popular. The fact, however, remains that provincial financial experience does not take one very far and that, when one has to act as Finance Secretary to the Government of India, he has to know much more than provincial finance can ever teach.

* * *

That Mr. Tallants will, in due course, be fully equipped for his job, there is no doubt. In the meantime it is as well that there is, by his side, a trained official whom he can call to advice and help, whenever necessary. This means that there may be no hurry in Mr. Taylor being appointed as Deputy Governor, officially. He has already been designated for the post ; but his actual transfer to his new job may take some time yet.

* * *

What is required at the moment is that the Governor of the Reserve Bank shall be appointed by the first of January. This will happen. Sir Osbourne Smith, too, will not probably be asked to get on immediately to the new appointment. He has just returned from a holiday and would, no doubt, like to take a little time to arrange the affairs of the Imperial Bank before handing over charge to his successor. Moreover, he would be available, whenever required, for advice even when he is at the head of the Imperial Bank ; and the authorities may like to save the expense of salaries till the appointments of the Governor and Deputy Governors become technically necessary.

* * *

It is possible that some time in December Sir Osborne Smith, Mr. Taylor and Sir Sikandar Hayat Khan will go to Calcutta and have a conference regarding various matters and talk affairs with the Central Board which would be appointed by them. In the meantime, Sir Sikandar Hayat is likely to visit New Delhi as soon as his Punjab Council session is over and hear from Mr. Taylor as to what transpired in London and in Bombay so that he may be well posted about up-to-date development.

* * *

Thus it is not likely that the appointment of the Deputy Governors would be made before January or even February. As regards their headquarters, I do not think the suggestions made by some speakers in the Assembly that they should be posted in different circles would be practical. At any rate, the authorities of the Bank would feel that, for the first year of the life of the Bank the Governor and the two Deputy Governors would have to be together at the headquarters of the Bank.

* * *

Later on, when the Bank is well-established, it may be possible to divide these three officials for some part of the year between Bombay, Calcutta and Delhi. However, this plan is far-fetched and none can say how, in the light of experience of the working of the Bank, the Governor and the Deputy Governors will arrange their duties.

* * *

As regards capital of the Bank, it was suggested recently that the capital will not be issued till July next. I doubt whether this is a true forecast of what is going to happen. Of course, technically, there is nothing to prevent the Bank functioning before raising the required capital. After all, the capital is going to be only a drop in the ocean of financial transactions the Bank will undertake. But propriety requires that the capital be raised before the Bank begins to operate.

* * *

This means that sometime in February notices should issue and after three-week's advertisement in the press capital should be called in. The capital will come in within the twinkle of an eye, no doubt ; but the chief task will be one of allotment according to territorial requirements ; and for this purpose the Assembly will also be asked to nominate representatives to sit with the Central Board.

* * *

If, however, the Central Board finds that its other duties are more pressing and take away most of its time, then the issue of capital may be delayed. But I doubt whether the Central Board would follow this procedure and I expect that before April the Board would tap the market and raise the necessary capital.

* * *

Talking of Reserve Bank reminds me of what every one here talks about to-day, namely Sir Shanmukham Chetty. If he had been appointed Deputy Governor he would not have been spared this defeat. The result of the election has come here as a surprise to the Government officials. They had been led to believe that the constituency was safe and that none had a chance of defeating Sir Shanmukham.

* * *

There is naturally every sympathy for him, especially at The Viceroy's House where Lord and Lady Willingdon took personal interest in the fortunes of the President at the elections. The general opinion here is that Sir Shanmukham fought bravely and did not shirk the Ottawa issue and that, though defeated, he has risen in the estimate of the official world for the bold stand he took politically.

* * *

Speculation has already started as to what would be the future of Sir Shanmukham. I would not mention all that I have heard for the reason that it is mostly baseless. After all, Sir Shanmukham is too well off financially to need a billet. Otherwise it remains to be seen how events shape. I doubt very much whether Lord Willingdon would like to take any hasty step to reaffirm his confidence in the outgoing President.

* * *

For the moment what worries Delhi is the spectacular victories of the Congress at the polls. Every member of the Viceroy's Executive Council who had a vote has gone and voted to-day probably against the Congress. The Commander-in-Chief, Sir Frank Noyce, Sir Fazli Hussain, Sir Joseph Bhore and the numerous Secretaries and Deputy Secretaries all went and voted. Lord Willingdon did not possess a vote ; otherwise he too might have gone and voted: Mr. Asaf Ali must feel proud that such mighty forces were arrayed against him in the election in which he seems to have the best chance of success for the Congress.

"HILL-BIRD".

THE GATEWAY OF INDIA

(FROM OUR CORRESPONDENT)

Thursday, November 13.

Bombay is in the full swim of the countrywide endeavour to lessen the burden of India's rural indebtedness. The problem of rural poverty is probably not as acute in Bombay as in other provinces, notably Bengal. But the steps that the Bombay Presidency are going to take are certainly more far-reaching than similar efforts that are being made in other parts of India.

The Land Mortgage Committee, recently appointed, have submitted their report and it is proposed to establish fifteen new land mortgage banks in various districts before April 1, 1935. This, together with the three banks already in existence brings the number to eighteen and if the scheme proves a success, it will be expanded till there is one bank for each district.

The object is to help the ryot to shake off the cruel stranglehold of usurious debts and to go happily forward with schemes of agricultural improvement. These banks will make advances on easy terms to deserving ryots and realise the money in a period which is not likely to be less than 20 years. They will operate on the debenture system and the principal and interest on such debentures will be guaranteed by the Government. The taxpayer thus becomes virtually a banker. It is proposed that the Government will retain the rights of supervision and control, which is only equitable if they have to guarantee the debentures. The management of each bank will be entrusted to a local commtitee or board of directors which shall contain certain nominees of the Government.

The scheme will shortly be placed before the legislative council with a further proposal that Government should grant a subsidy for the successful launching of the scheme. Considering the wholesome object of the whole project it is hardly likely that the Council will throw the scheme out.

But the coming elections, of course, have eclipsed all other topics or interests. Everywhere people are discussing the chances of this candidate or the other and it is almost a wonder that the normal work gets done at all through all the pother of election enthusiasm. The keen interest that this year's elections have aroused in the country is perhaps the surest proof that India is at last shaking off her tragic fatalism about matters political.

There is no doubt that great events are in the making. The country is in the throes of an election that will usher in a new constitution. On the other side, behind closed doors and in an atmosphere big with promise and potentiality, the big financiers of India are laying the foundations of India's Central Bank. Sir James Grigg, Finance Member to the Government of India, has now returned to his imperial abode in Delhi ; but he refused to be drawn into making a statement before leaving. There is no doubt, however, that important discussions were held in connection with the Reserve Bank and the country is waiting breathlessly to hear what progress has been made.

Other matters also engaged the attention of the Finance Member during his visit. A deputation of the Motion Picture Society of India waited on Sir James with a plea for relief to the motion picture industry. They made out a strong case for themselves. They pointed out that while the cost of production for pictures had increased to an average of Rs. 75,000 neither the number of theatres nor the rates of admission had increased proportionally. Then again the cost of new films used per picture was approximately Rs. 15,000 or 20 per cent. of the total cost whereas in America the proportion was only 1.4 per cent.

Whereas hitherto Government retained only $\frac{1}{8}$ths of the duty and returned $\frac{7}{8}$ths, to the importer if the film were returned within a period of 2 years from date of import, Government, by the abolition of the $\frac{7}{8}$ths rebate in the past session of the Assembly would retain $\frac{7}{8}$ths and return only about $\frac{1}{8}$ths. Due to this windfall and the natural expansion of the industry, Government would make 10 to 12 lakhs extra annually. The deputationists, therefore, prayed that the duty on raw films would in the circumstances be substantially reduced by Government while framing the budget for 1935-36.

The question of the Kathiawar States is again coming to the fore. Representatives of the Government and of the three maritime states of Morvi, Junagadh and Porbandar will, it is understood, shortly, meet to discuss the operation of the "Schuster Schedule" of customs reforms.

The Government of India nominally receive the whole amount of the duties leviable on goods imported through these States and crossing the Viramgam line into British India. Until recently, the States were subsequently credited with the amount so collected if and when it was Rs. 2 lakhs or less in each case. No credit was, however, given if the amount of customs exceeded the Rs. 2 lakhs' limit.

Some revision of the system, therefore, became necessary, and the "Schuster Schedule" was introduced. According to this arrangement, if a State's despatches over the Viramgam line produced more than the two-lakh limit, it received by way of refund an amount equivalent to the highest sum refunded by the Government of India to one of the other two States.

Recently, however, despatches from all the three States bear duties exceeding the Rs. 2 lakhs' limit, and accordingly, none of the States recover anything at all. They, therefore, hope for a new and more favourable agreement.

The existing system was nominally applicable to Baroda and Nawanagar also, but both of them refused to accept the refund which implied their consent to an arrangement which they considered inequitable. Nawanagar's case has been settled by Lord Dunedin's arbitration and the State now recovers Rs. 5 lakhs annually.

With regard to the important question of diversion of trade to Bhavnagar, the departure of Sir Alan Parsons for England has practically shelved the problem for the time being. But it is believed that Sir Prabhashanker Pattani, during even the brief discussions he had with Sir Alan before his departure, appeared in a sufficiently uncompromising and rigid light to make it plain that Bhavnagar does not intend to yield an inch without a struggle.

The strike in the Ahemedabad Ginning Mill still continues. The management of the mill have withdrawn the notice to close the mill and have decided to employ new men. The police are standing by ready to prevent a clash between the new and old hands. It is feared that the affair is slowly taking a graver turn. Considering the highly combustible nature of Bombay labour it is very desirable that a peaceful settlement should be arrived at quickly. Otherwise the country may be engulfed in another ruinous labour crisis. It is gratifying to learn, therefore, that Gandhiji, the Apostle of peace and goodwill, had decided to make Ahmedabad his headquarters in his work in connection with the Village Industries Association. He is busy collecting information about the various village industries from basket-making to cattle-breeding and hopes to be able to reconstruct village economy within the astonishingly short space of two years. Whatever that may be, it is certain that the presence of Gandhiji in Ahmedabad will act as a brake on the violent and eruptive population of the mill area.

SOUTH INDIA

PASSING OF THE DROUGHT

(From our Correspondent).

Madras, 12th November.

The drought in South India, to which I made reference sometime back, has to a large extent disappeared. The Southern Districts have had almost heavy showers and though now they are undoubtedly to the good of the standing crops, their continuance at the present rate would be the cause of anxiety. After the prolonged shortage of water supply, the ryots hardly think of the danger ; and the first feeling is one of gratitude that the crops are not to wither and die, thus involving the cultivators not only in serious loss of outlay but their means of subsistence in the months to come. But the feeling cannot in the nature of things last long. For the sight of continued heavy showers raises in the minds of our peasantry, long used to suffering, the fear that drought might ultimately give place to floods. Rains have, indeed, diminished during the last one week ; and as things are, it looks as though this year's harvest is saved. As hinted already, there is a certain limit within which the usefulness of the crop to the grower is independent of the level of prices. In so far as their food crops are concerned, the ryot may well be in a position to utilise a part of the crops for the needs of himself and his family.

But even this would seem to be saying too much. For there is the case of Travancore where a recent issue of the Gazette is largely a list of holdings which are to be auctioned for arrears of land revenue. It is, indeed, a pity that a State, which in the past has shown extreme compassion for the poor, should take such drastic measures and should ignore altogether the wise recommendations of an Economic Committee which enquired into this question last year. It is not generally known that the Committee recommended definitely that the Government should not dispose of the lands where they have reason to think that a fair price is not forthcoming, and that in such case it would be better to endeavour to cultivate the farms through Government agencies. In a small State like Travancore, it should not be difficult to adopt such measures for there would be no insuperable administrative difficulties involved in it. But the Government have not moved in that direction at all, while the agricultural distress has been increasing, with the result that large numbers of farms are now scheduled for auction. It is obvious that in such cases the harvest can bring no relief to the peasantry, as it comes to be dispossessed of its holdings. In India matters have not gone so far as yet, though a prominent landholder of Tanjore recently declared that so long as landholders continue to pay the kist, the Government cannot be expected to recognise the demand for remission of land revenue and that the time is come when tangible proofs of incapacity to pay should be afforded. This apart, it may generally be supposed that for sometime there would be no fear of dispossession. Neither the village bankers nor the Government have gone to extreme steps and, what is more, the drought has done one good ; and that is to raise the level of prices of paddy. There has been during the last one month a rise of nearly 20 per cent. in prices. It is obvious that, if the harvest had failed, agriculturists would hardly derive any benefit except such as have some stores with them. But now that the prospects of the crop are better and gain in prices has not been lost, the general outlook has improved.

In the case of the Cauvery Delta, the drought has been an impressive demonstration of the benefits of the Mettur project. The current year has seen the worst vagaries of the monsoon ; and in this respect it is comparable with the year 1928, when agriculturists were, so to say, tantalised by alternations of scarcity and sufficiency of water. The Cauvery has always been subject to such serious vicissitudes of water supply. The time when the towns and villages on the banks of the Cauvery were inundated by unprecedented floods in the Western Ghats is not forgotten ; and it would be, particularly, unfortunate to have to remember the times of excessive supply when the rivers and canals are running dry. It is a natural thought that, if some thing were done to store up the water during the times of excess, the regularity of the supply could be ensured. And this is exactly what the Mettur project has done ; and the first year after the inauguration of the project has shown the benefits of the scheme. Before the construction there was no certainty as to whom rain would come, how long it would last and whether it would be continuous and steady. Ryots were, therefore, chary of taking the monsoon in its initial stages at its face value. Much water would thus ran to waste, breaks in cultivation were thus occasioned too often now all the uncertainty has been eliminated and the ryots are in a position definitely to know when they might begin the work of cultivation for each crop of the year.

In a recent speech Mr. E. R. Wood, the District Collector of Tanjore, has stated the benefits of the Mettur supply with facts and figures, which are well worth reproduction here:

"These beneficial effects have been experienced in the first year during which the Mettur project has operated. The S.-W. monsoon has been a failure this year and but for the existence of the reservoir the supply in the rivers would have been neither as steady or assured as it has been this year and the condition of the delta would have been as bad, for example, as in 1928 when the monsoon conditions were similar to those of this year.

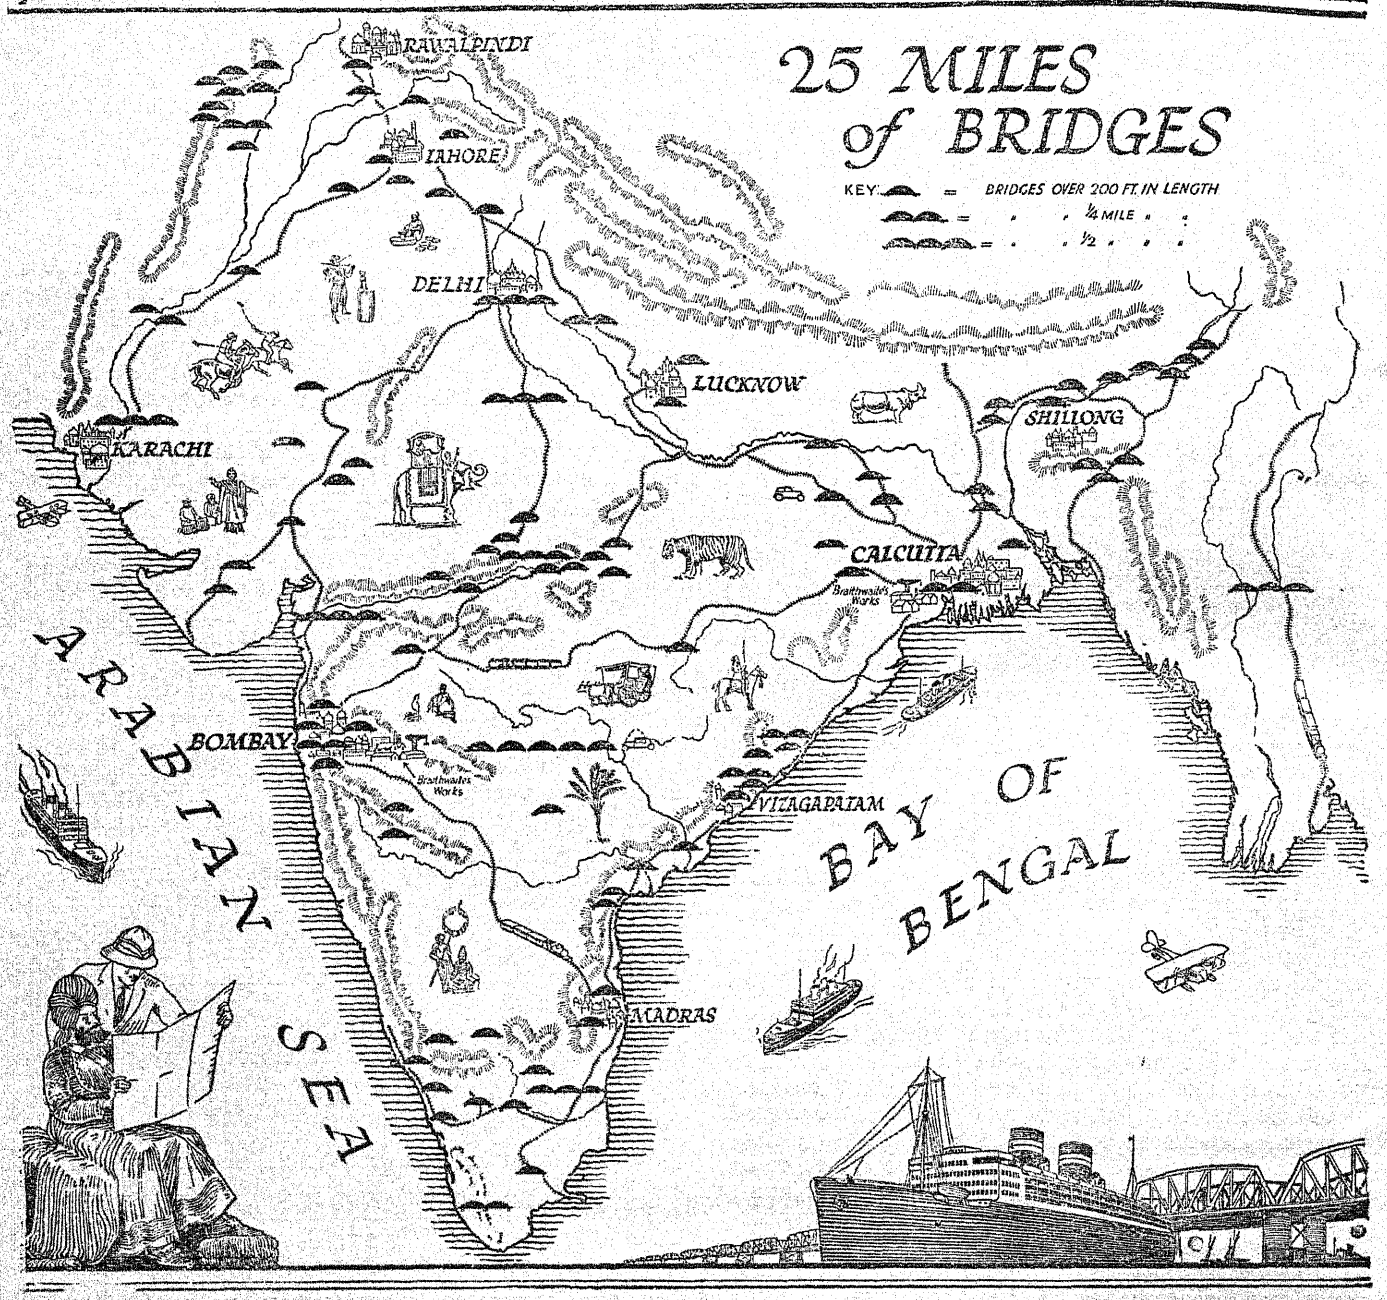
"In 1928 a supply sufficient for irrigation requirements was first received on June 16 ; it began to fall below requirements on June 24 and from this date up to July 10, 1928, the supply was very short indeed, being below 2,000 cusecs. It again fell on July 12, 1928, and after a slight rise on July 15 there was another drop until July 22. Thereafter the supply was sufficient for the requirements of the raiyats up to August 14, 1928. In the later part of August and September considerable scarcity of water was experienced.

"This year if there had been no reservoir the supply received would have been much below normal requirements up to June 28. There would then have been sufficient until July 15, but from that date up to August 2, a period of maximum demand, the supply would have been an entire failure and crops would have been damaged. From August 2, the supply would have been sufficient for three days after which, again, until August 14, the supply would have failed. Thus in this period alone, quite apart from the period subsequent to August 15, the supply would have failed for about 34 days.

"Actually, however, the reservoir discharged into the Cauvery during this period a steady supply up to normal requirements. But for the reservoir there would have been a erious failure of crops this year."

(*Continued from page 1237*).

The municipal budget for the year 1935-36 is out and reveals a surplus balance of Rs. 4,04,000 without the odious necessity of imposing fresh taxation. This is fairly satisfactory as far as it goes but referring to the "narrow margin of safety," Mr. Tamton, who introduced the budget says: "It is not only difficult during the year to meet demands not provided in the budget, but a decrease in estimated revenue or any increase in expenditure owing to unforeseen causes, such as an epidemic, is liable to bring the closing balance below the statutory limit of Rs 1,00,000. The necessity of obtaining additional sources of revenue from Government is, therefore, pressing.[2]'



On the map are shown the 116 most important bridges out of the 196 which Braithwaites have built in INDIA between 1923 aud 1932.

OVERSEAS' NEWS: By Air Mail

GREAT BRITAIN

DISAFFECTION

The launching of the Incitement to Disaffection Bill synchronised with a countrywide feeling of doubt and hesitation in what is said to be the most stable Government England has ever known. A Britisher has his well-known fanatic zeal for liberty and a Government which has not learnt to respect these susceptibilities of Englishmen quickly comes to grief. You may preach war or peace at Geneva, you may practise protection or free trade in your economic relations with the rest of the world. You may even, by an obstinate adherence to 'economii nationalism', completely shrivel up the stream of international trade much to the detriment of England's industrial prosperity. But you may not ask to search an Englishman's home merely on the suspicion that he is harbouring disloyal sentiments. A Britisher's home is his temple and he will not have it desecrated by even a six-foot policeman armed with a search warrant from the highest authorities.

It is true that the provisions of the Bill as it now stands are much less severe than when it was first conceived. For instance, while previously two J. P.'s could issue a search warrant it now requires a High Court Judge to do so. Furthermore, the onus of proof that there was "intent to commit" an offence under this Act lies now with the prosecution —always a check on thoughtless and hasty prosecutions. Yet not a jot of evidence was adduced during the debates on the Bill on the floor of the House to prove that the Bill is necessary in the interests of peace and security. After all, such protective measures always have an odious flavour and only the extreme urgency of the situation can excuse a Government raising a sandbag wall of such timorous legislation around itself. The existing provisions in England's penal code are generally thought to be sufficient for the purpose of quelling a mutinous insurrection or a seditious conspiracy. Why then such elaborate safeguards should be sought against the remote contingency of the loyalty of His Majesty's forces snapping under the strain of an elaborate "disaffection" propaganda that does not exist is not easily understood.

That the Bill is also not entirely free from inconsistencies has been proved by the pointed reference made in the press to the speech of the Bishop of Birmingham in connection with bombing from the air in Afghanistan. Says His Grace, "Knowing that my words as published in the English press may reach members of the Royal Air Force concerned, I say that I cannot think that a Christian man could act under orders in this way."

This is surely incitement to Disaffection and under the present Bill. When it becomes an Act any soldier found in possession of the worthy Bishop's speech, is a traitor to his King and country.

The Big Three

It is curious that, if the 'National' Government is the obvious boon to the people that their loud-voiced supporters try to make out, it should still require the fostering care and solicitude of its champions at every step to keep it alive. The Annual National Labour lunchoen at the Trocadero is one of the many occasions when the usual arguments are trotted out to prove that never before was anything on such a gratuitously generous and humanitarian scale attempted in England and that the 'National' Government marks the beginning of the most glorious chapter in England's history. Whatever credit there is to be had out of the multifarious activities of the Administration is quickly pounced on and labelled as due to the 'National' Government. If the country is saved from a dictatorship, it is because of the blessed co-alition. If the country is saved from a war, even if by a fluke, it is also owing to the 'National Unity'.

It is true that the National Government, brought into being by a temporary emergency, has served a certain purpose—it carried the parliamentary tradition unbroken through a period of intense political unrest and instability. But this pose of saviour of the country which is affected by the 'National Triumvirate is now beginning to stink in the nostrils of the people—the more so as the 'National' Government have begun to tinker with the rights and liberties of the people.

"The work of the National Government" said the Prime Minister, "has made the great centre of the Empire more honoured, respected and appreciated by our sons and daughters in remote territories than ever before." "The greatest guarantee of social and democratic stability" said Mr. Baldwin, "is the con tinuance of a broad-based Government bringing together faithful men from all parties". And according to Sir John Simon "the spirit behind the National Government is the spirit of the British people".

One can understand the eagerness of these anxious leaders to convince the country about the the next election looming daily larger on the horizon. But they may be sure that the country will not judge them by the complacent platitudes that they utter at Trocadero luncheons but by the results of their already long and eventful administration.

Borough Elections

The sweeping victories gained by the Labour Party in tht Borough Elections should shake the complacency of the protagonists of the "National" Government. A country which prefers to fill its local councils with "labour" men may eventually decide to form its national legislature that way also. Indeed, the result of the Borough elections has taken a lot of wind out of the sail of the "Nationalist" barque. The loud praises, that the Nationalist Triumvirate have sung of the present coalition government notwithstanding, the country has given unmistakable indications of its preferences. It will take more than airy oratory or a breezy utterance of promises for the future to ensure the "National" government the necessary measure of support at the next elections. There is a growing feeling in the country that the "Nationalist" government have not lived up to the high hopes cherished about them. They often make a virtue of necessity and point out that they have avoided war. But it would perhaps be more correct to say that war has avoided itself and that the lessons of the last world conflagration have not been yet forgotten. But the intense policy of "economic nationalism" followed by the Government which has eaten into the vitals of international trade, the deadly wall tariffs and quotas which they have built around the British Isles, the undignified neutrality they maintained in the face of serious breaches of the codes of international honour by Japan—these are all laid at the door of the much-vaunted National Government. If Mr. Ramsay Macdonald wants to continue to lie in the snug berth he has made for himself he must successfully convince the country that a thorough revision of the entire policy will be undertaken with a view to speeding up the processes of recovery. Let us hope that, now that a sense of security does not add to the complacency of the Nationalist Party, they will endeavour to deserve and to earn what they seek.

A gratifying feature of the Borough Elections was the election of two Indians—Dr. C. L. Katial and Mr. Krishna Menon. Dr. Katial, it will be remembered, was the medical adviser of Gandhiji

Air Mail Week

during his London visit. Mr. Menon has lately done yeoman service during the political campaign of his party. It is perhaps a sign of the times that Indians are figuring more and more in the political arena of Great Britain.

FRANCE

HEADING TOWARDS CRISIS?

Interest in France during the current week is definitely centred round the Party Conferences. Is the political situation heading towards a crisis? This is the question which is being asked on all quarters. Even during the earlier week the weakness of the franc, in the face of the reported success of the Gold Bloc Conference at Brussels, was attributed to the political situation rather than to the other factors. This feeling of suspicion has now gained strength. The Socialist Conference held last week had not created any new situation though it has given a hint of the possibility of dissensions in the Cabinet. It now transpires that, in the matter of filling up the vacancies in the Cabinet caused by the Marseilles murder, there were evident signs of opposition. It appears that M. Leval was chosen for the post of Minister of Foreign Affairs only after the claims of M. Flandin, the present Minister of Public Works, were set aside. The President himself appears to have recognised the presence of opposition and have yielded in certain respects to smoothen matters.

The apparent patch-up portends to be shortlived. The proposal for Constitutional Reforms is meeting with strong opposition; and muffled up to now, it has become pronounced. The main lines of reform, already outlined in these columns on previous occasions, were put to the Conference. As far as strengthening of the Prime Minister's hands is concerned, the Congress has wholly endorsed the President's proposals. The scheme for a complete reorganisation of the National Economic Council has also received its approbation. But on the question of the extension of right of dissolution, there is stern opposition. "The Radical Socialist Party can never admit," the Congress is reported to have said, "in any form, measures which may prove favourable to the exercise of a personal power in defiance of the Republican principle." At present, dissolution of the Chamber, before the end of its statutory life, is possible, but by convention and usage this has remained a dead letter. This prerogative was utilised only once in the history of the French Republic; but the Radicals point out that the Senate has always proved to be a useful body in the Constitution; and there has been nothing either in the composition of the body or the procedure followed in it, to necessitate forfeiture of the right of consent before a dissolution of the Chamber could take place. The Senate has always been the stronghold of the Radicals; and they do not like to be deprived of the privileged position they hold.

As regards the proposal for reforming the civil servants and placing them on a regular footing, the Radicals have little or nothing to say: at least the Nantes Conference did not pronounce any adverse comment: but this is likely to be opposed by the Socialists and Communists.

It, therefore, appears that the fate of the Coalition Ministry will hang in the balance. Is it that President Doumergue has fulfilled the purpose for which he was called back from his holiday in February? With the Marseilles tragedy too green, and the forthcoming Saar Plebiscite, it would appear that the political parties will do well to restrain their party feelings and endeavour to maintain internal calm. The conflicting reports that are received from the Saar region regarding the activities of the Nazis, have only tended to increase the fears of the French populace. Will the necessity for peace be realised by the political groups?

The Radicals have up to now proved themselves conciliatory. M. Herriot has always been the staunchest supporter of the Doumergue government. He has recognised the need for a reform in the Parliamentary procedure and has managed to obtain the vote of his party for the major reforms suggested by the President. The President, on the other hand, commands the support of M. Tardieu, in his demand for power of dissolution of the Chamber. He, too, has yielded to the wishes of the Cabinet on occasions: but he appears to feel, at the same time, that the country is ungrateful to him for the services he has rendered. He has provided a stable government. He has set the State finances in order: he has maintained the stability of the currency intact; he has done other things meriting appreciation. More important than all are the Parliamentary Reforms and when there is hesitation in giving him the powers necessary for carrying them out, he appears to resent opposition. He is to make a broadcast speech on November 3, when he will plead vigorously for what he stands for. In an earlier speech he said that he would "fight till he is beaten on all sides." This would give one an idea that he is not likely to meet M. Herriot on the ominous question of dissolution of the Chamber, till his broadcast speech gains him the necessary support in the face of the opposition of the various parties.

GERMANY

DEBT AGREEMENT

The Anglo-German negotiations appear at last to have borne some substantial result. Though a detailed report of the results of the labours of Sir Frederick Leith Ross is not available, the main outlines of the agreement reached are known. The German Government have now agreed definitely to set aside 55 per cent. of the total value of the exports to the United Kingdom towards the payment of British exports to Germany. Till now payments for German imports were made into the Special Account, according to the provisions of the Exchange Agreement and the amount so paid into the Special Account was always limited by the rate at which the Bank of England was able to dispose of the accumulated currency. If there has been a slowing down in finding uses for the sondermarks, not only were further contributions stopped by the Reichsbank, on account of the transactions already committed; but also fresh transactions had to be entered into with caution. The danger of the credit becoming frozen was always present. With the definite guarantee to set aside a substantial portion of the available exchange towards meeting trade obligations, the English delegation has won an important concession. The British authorities think that 55 per cent. of the German exports to the United Kingdom will be sufficient to provide payment in full to British exporters. It is not known if the Exchange Agreement has been completely set aside, by this new arrangement, though the understanding now arrived at savours much of a clearing. Foreign exchange permits for the imports of British goods are at the outset to be issued without restriction, though provision has been made to restrict this temporarily after consultation with the British Government.

Another important concession that the British delegation has wrung out of the Nazi officials is in respect of the old outstanding. It will be remembered that the Exchange Agreement which began functioning on the 20th August, was devised only for

Air Mail Week

regulating payment of trade transactions from that date and one of the causes for dissatisfaction is that it has left the question of outstanding debts undiscussed. Now the German Government have undertaken to provide £400,000 immediately and to expedite payment of the balance by realising German commercial claims on the British Kingdom. If this is not found to be sufficient, for the purpose, arrangements have been made for the allocation of a further percentage of the proceeds of German sales. It is also reported that provisionally this percentage has been fixed at 10 per cent. There is one similarity between the proposals that Germany put forward sometimes ago in this connection and the arrangement now arrived at. In reply to the Cotton delegates' demands from Manchester for liquidation of cotton debts, the Reichsbank is offered payments in monthly instalments, the entire debt to be wiped out in twelve instalments. This was not agreed to by the Cotton magnates ; but now, in addition to the initial outlay the complete liquidation will be effected in not more than 12 instalments. This concession should go a long way to restore the goodwill and credit of the trading communities in both the countries.

Payment of the interest on Dawes and Young Loans is to be continued in full by Germany as hitherto. The holders of other loans are offered 4 per cent. Funding Bonds according to the agreement reached in the various Conferences that took place earlier. The various transfer restrictions are exempted in the case of these holders of other loans provided they accept Funding Bonds in full payment of any coupon funded. These provisions are considered as improvements on the present situation and are expected to meet with the general approval of the British interests.

The German policy of economic self-sufficiency is in the meanwhile, being consistently pursued by the authorities. Dr. Schacht has, in the course of a recent speech at Weimer, given a very bright view of the prospect of replacing the foreign raw materials by synthetic materials. In the field of textiles, we have discussed on previous occasions, the introduction of Vistra, Stapelfaser, Wollsha and other fabrics. The technical possibilities of the use of these substitutes in the spinning and weaving mills, have ceased to be a problem. Due to the important technical improvements effected, the manufacturers can now increase the amount of fabrics that can be made from a given quantity of wool or cotton. Already the textile production in June and July last has exceeded the output in 1928, when the loom in the industry was at its height by 5 per cent. In the last few weeks complete success has been attained in the production of synthetic rubber. In mineral oils, too, considerable improvements have been effected. Several processes have recently been invented which would yield about 85 to 90 per cent. of regenerated oil. One of the advantages of this development is that such regenerated oil is 25 to 30 per cent. more economical in use than new oil. The latest achievement of the Government worth mentioning in this connection, is the union of the ten lignite producing concerns under the supervision of a Reich Commission with sweeping powers to promote production of benzine by the hydrogenation process. According to the estimates of an expert in Germany the country will, in a few years be able to produce annually 1,250,000 tons of benzine, against her normal consumption of 1,450,000 tons. The question of costs, at the same time, is causing some concern to the authorities, as the synthetic products are not always cheap ; but the Nazi officials are confident of reducing costs by further experiments.

While on the subject of foreign trade and foreign exchange, Dr. Schacht never loses the opportunity of criticising the Versailles Treaty. Speaking before the officials of the Reichsbank, he outlined the enormous reconstruction work the Reichsbank had to do owing to the destruction of the international currency mechanism of the pre-war times by the "economic madness" of the Versailles Treaty and also because of the destruction of the national credit apparatus owing to the "irresponsible debt policy of the Marxistically infected period." He has, therefore, pleaded for a complete reversal of the economic policy. In the course of his speech he has discovered that "it would be sufficient to burn what hitherto has been worshipped and to worship what hitherto has been burned."

This tendency to restrict imports and exercise a strict control over raw materials, has resulted in various attempts to hoard commodities and raise prices. During recent weeks people have bought textiles, soaps, string, etc., fearing a shortage of supplies or a deterioration in the quality of such goods or an advance in prices. The increase in the average textile sales in September, 1934 which is 23 per cent. more than the turnover in the corresponding period last year, is accounted for as due to this panic among the people. Chemists also report bigger increase in their sales in September than in August, which they attribute to the large purchases of soap. Retail prices of potatoes compared with last year have increased by 53 per cent., peas by 65 per cent., beans by 14 per cent. and so on. Though the official report says that only about 11 per cent of the sales is due to advance in prices, the actual facts appear to indicate otherwise. Even this increase of 11 per cent. is enough to draw the attention of the officials to the existence of the profiteering tendency. This increase of prices has thus become a topic of political interest for the public. Though no information is as yet available as to what official action has been taken, in the matter, a semi-official News Agency reports that the Minister of Economics has now decided to investigate the question. It is also understood that district Nazi officials have been ordered to submit a detailed report on prices in each locality.

67, STEPHEN HOUSE, DALHOUSIE SQUARE
CALCUTTA

LONDON CLEARING HOUSE

J. C. SEN, B.A. (Harvard).

In an unpretentious building, with limited floor space, and in a side alley, is housed the London Clearing House, the most important Clearing House in the world. Ten British Banks, namely, (1) Barclays, (2) Coutts, (3) Glyn, Mills, (4) Lloyds, (5) Martins, (6) Midland, (7) National, (8) National Provincial, (9) Westminster and (10) Williams Deacon are the members of the London Clearing House. The Bank of England, or "The Bank" as it is called, is a member of the Clearing House in the outward or charges side only ; cheques and drafts etc., drawn on it and deposited with the clearing banks must be deposited by them across the counter to the credit of their account with the Bank of England.

No foreign bank is a member of the London Clearing House and the British Exchange Banks which have their main business in foreign countries and British Dominions and Colonies and other British Banks are also not members of the Clearing House. The privilege of admission as member of the London Clearing House is jealously guarded ; and it is not likely that any new members will be admitted in the future.

In the London Clearing House three distinct clearings are conducted, namely, (1) Town (2) Metropolitan and (3) Country. Head offices and those branches of the clearing banks which are situated within easy distance of the Clearing House are in the town clearing and those branches which are within the metropolitan area of London, but situated at a distance from the Clearing House are in the Metropolitan Clearing.

Though the members of the Town Clearing, excluding "The Bank," are only 110 as compared with 638 of the Metropolitan Clearing, yet by far the largest volume of Clearing passes through the Town Clearing. In 1933 the proportion of Town to total clearing was 86.2% as compared with 5.1% in the Metropolitan and 8.6% in the Country Clearing.

The average daily clearings from 1900 show not only huge increase of business, but also spread of the banking habit among the British public. It can be said without exaggeration that about 95% of the total business in Britain is conducted by means of cheques, leaving a bare 5% which is done in cash.

The Town Clearing is divided into two sections, morning and afternoon. The morning Town Clearing opens at 10-30 a.m. and drafts etc. are received up to 11-5 a.m. The afternoon session opens at 2-30 p.m. and closes at 3-30 p.m. All unpaid cheques etc., must be returned at the Clearing House not later than 5 p.m. On Saturdays the morning clearing opens at 9 a.m. drafts etc. are received not later than 10-20 a.m. The afternoon clearing opens at 12 noon, drafts, etc. are received not later than 12-35 p.m. Return cheques are received not later than 1-30 p.m. On April 1st, June 30th, October 1st, December 31st and on such other days as the Honorary Secretary may determine, the time is 4 p.m. for the last delivery and 5-10 p.m. for the last Returns, except when either of these days is a Saturday, the time is 12-45 p.m. for last delivery and 1-45 p.m. for the last Returns. The Town Clearing is settled the same day on which the work passes through. Thus, a customer of a clearing bank can pay in a draft on another clearing bank up to 3-30 p.m. and know that it will be cleared at 5 p.m.

The Metropolitan Clearing opens at 9 a.m. on weekdays and 8-45 a.m. on Saturdays. Drafts etc. are received not later than 10-30 a.m. on weekdays and 9-50 a.m. on Saturdays. The settlement of the Metropolitan Clearing is made in the Town Clearing on the next business day succeeding the day of presentation. Unpaid Metropolitan Clearing Drafts are returned by post on the day of presentation direct to the Bank or Branch Bank whose name and address is on the crossing. A debit slip for each separate unpaid, giving full particulars is passed through the Town Clearing on the day of settlement. Unpaid drafts bearing the crossing of a Foreign Bank are returned to the English office or Agent and not to the place of origin if abroad.

In case of unpaid Bills and Bills not due to be returned by post on the day of presentation to the Head Office or to the London Agent of the presenting Bank, the Crossing Bank or Branch is notified by post the same night quoting reason for returning same, the option of noting, on the following day, resting with the holder. The claim for repayment is made on the Head Office or London agent to which the Bill has been returned.

The Country Clearing is held each day for the interchange, among the London Bankers, of cheques on their branches and correspondents in the country, placed in their hands for collection. Each London Banker remits for collection to his Branches and country correspondents the cheques drawn upon them, saying, "Please say if we may debit you £. . . . . for cheques enclosed." Country Bankers, who wish to avail themselves of this clearing, remit their country cheques to their own London Agent and stamp across them their own name and address, and that of their London Agent. Any Country Bank not intending to pay a cheque sent to it for collection, returns it direct to the Country or Branch Bank, if any, whose name and address is across it. Each Country Banker writes by return of post to its London Agent in reply.

"We credit you £. . . . . for cheques forwarded to us for collection in yours of . . . . . ." Adding in case of non-payment of any such cheques, "having deducted £ . . . . . for cheque returned to Messrs. . . . . at , and £. . . . . returned to Messrs. . . . . at . . . . . .

Country Clearing opens at 10-30 am. Drafts, including Returns, are received not later than 12-30, except on Saturdays, when the time is 10 o'clock for the opening, and 11-5 for the last delivery, including returns. The settlement of the country clearing takes place on the second business day following that on which it passes through the Clearing House.

It has been already mentioned that there are, besides the Bank of England, ten members of the London Clearing House. The non-clearing banks in which are included the branches of foreign banks, effect their clearing in the following manner. Most of them maintain accounts with several clearing banks. Cheques deposited by their customers on Clearing Banks, are endorsed by them in favour of their Clearing Agents and deposited for credit of their account with them. Cheques drawn on non-clearing banks are presented by other banks' messengers direct to them. These are called "Bankers charges." In the cash department of non-clearing banks there are separate cashiers for handling Bankers charges. The messengers from time to time deposit bundles of cheques, together with a machined list, in a cage. The Cashier scrutinises the cheques and if they are in order writes out a cheque on their clearing banker in favour of the presenting bank and hands it over to the messengers when they call for them. Against payment of these cheques, the non-clearing Bank must issue cheque in time for the last clearing.

Clearing statistics from 1900 to 1933 show the tremendous increase of banking business which has taken place in Britain. Though, since 1931 there has been some decrease owing to the worldwide trade depression, yet as compared with 1900 the volume of business has more than trebled.

JUTE AND JUTE GOODS

JUTE

Calcutta, Nov. 15.

Conditions in the raw jute market were not dissimilar to those that prevailed during the previous week. Price fluctuations were likewise narrow, December futures ranging between Rs. 27-8 and Rs. 27.

There was no report from the mills. Quotations were nominal and unchanged as reported during the previous week. Export enquiry was, however, slightly better towards the close of the week. Business in ready Firsts was done at Rs. 25-12 and November at Rs. 26-2 per bale with buyers over at this price.

The imports of jute in the Moffussil area has been showing a decline partly because of the fact that about half the crop has already been received in the port towns, and partly due to a fair portion of the remaining crop being held in strong hands.

The tone of the market on the whole has been very steady. General feeling has been very bullish and it is anticipated that a considerable rise in the price of jute is likely to take place early next year, when the Government of Bengal will make their announcement regarding the percentage of reduction in next year's crop they propose to carry out. On the other hand there are some people in the market who feel that this year's supply is not going to be less than 90 lakhs of bales and that unless next year's crop shows a considerable decline, there will not be much rise in the price of Jute. The immediate tendency and the undertone of the jute market are steady.

JUTE MANUFACTURES

Calcutta, Nov. 15.

During the early part of the week the hessians market was rather steady due to better enquiry for spot goods. Later, however, an easier feeling prevailed and prices are lower by a couple of annas than what they were at the opening of the week. There has been a persistent rumour in the market that one of the members of the Indian Jute Mills Association is forcing the view that another 2½ per cent. of the hessian looms should be unsealed early next year in order to discourage the extension of the loomage of the non-associate mills and also discourage the growth of new smaller mills which are contemplated by some rich individuals. This has had an immediate weakening effect, particularly, on forward hessian positions. The premium on ready hessians over February futures which had narrowed down to 2 annas per hundred yards during the middle of the week, has for the reason aforesaid again widened to 3 annas, the ready now quoting Rs. 8-10 and February Rs. 8-7.

Heavy goods was a feauterless market; business was poor and rates were more or less nominal and unchanged.

COTTON AND COTTON GOODS

COTTON

Calcutta, Nov. 15.

The latest United States (November 9) Bureau report estimates production at 9,634,000 bales, being 3,413,000 bales below that of last year and 5,032,000 bales under the five year average. Until the United States cotton crop control plans are announced, the immediate trend of prices is bound to remain uncertain.

At Liverpool American cotton quotations were steady owing to reduced stocks in that market which received a much needed stimulus from the removal of the ban on textile exports to Germany in terms of the Anglo-German debt agreement.

GINNING REPORTS

American cotton of the growth of 1934 ginned prior to November 1st totalled 7,920,000 running bales, counting round as half bales, the Bureau of the Census, Department of Commerce, announced on Nov. 8, in its seventh ginning report of the season.

This compares with 10,361,000 bales last year; 9,249,325 in 1932. 12,124,295 in 1931 and 10,863,896 bales in 1930.

The next report will be issued on November 21.

Crop movements and ginning have begun in the Punjab and held up in the Khandesh and Domra districts due to the recent untimely rains. The cotton crop in the Nizam's dominions is expected to be much below that of last year because of deficient rains at sowing time.

Piecegoods

Calcutta, November 15.

During the past week the local market business has been shared by Indian and Japanese sellers, printed styles being mostly in demand. Big deliveries by Bombay mills on account of Calcutta buyers are reported as the demand for ready goods continues at an economic level of prices. Substantial Bombay forward commitments have been also put through. Lancashire has been practically out of the picture.

There has been an appreciable increase in imports from 17,516 packages of piecegoods and yarns in October, 1933, to 29,806 packages in October, 1934, during which the United Kingdom increased her total from 54,559 packages in January to 65,794 packages last month, while Japan has fallen from 123,323 packages to 98,437 packages during the corresponding months.

BULLION

GOLD

Calcutta, November 15.

Dull conditions have prevailed in the gold market throughout the week and the price fluctuations have been very small. London gold is quoting £6-19-6 and local prices are Rs. 34-10-0. London-New York cross rate has remained at 5.00 and London-Paris at 75.93. The market is featureless, but the tendency in general is easy. Taking a long view of the market, it appears that the rise in gold is almost over.

LONDON—Air Mail Week.

The Bank of England gold reserve against notes amounted to £192,001,187 on the 24th inst. as compared with £191,938,546 on the previous Wednesday.

In the open market business has been on a smaller scale, the amount disposed of during the week being about £1,200,000. The demand was general and movements in the gold exchanges caused somewhat wide fluctuations in prices, which, however, were maintained at a premium over the parties.

SILVER

Calcutta, November 15.

Very steady conditions have prevailed in the Silver Market and price has once again crossed Rs. 68. London silver has jumped up to 25¼d., on India and China buying. The closing has, however, been a bit easy, London quoting 24⅞d. per ounce and Calcutta Rs. 67-10-0 for 100 tolas. New York quotations are 53⅞ Cents. The tone of the market is still very steady and purchases at every decline will prove profitable.

London—Air Mail Week.

The market has been active but with an easier tendency. The Indian Bazaars have made further purchases, but speculative demand has been less in evidence, buyers on the whole having been more hesitant. Moderate offerings from China and speculative re-selling were sufficient to ease prices, but America has been willing to give support at about fixed prices on most afternoons.

The undertone appears steady, but the market may continue to be influenced by movements in the dollar exchange.

The following were the United Kingdom Imports and Exports of Silver registered from mid-day on the 22nd inst. to mid-day on the 29th inst.:—

SUGAR

Calcutta, Nov. 15.

The pressure of sales of Java sugar at declining rates and fear of sales of Indian sugar in the near future at lower rates have induced a nervous feeling in the market.

Indian Sugars.—Prices were nominally unchanged. Owing to continued fall in Java prices there was practically no interest in Indian Sugars. Cawnpore Market was reported dull. As regards forward positions, it was reported that some of the Mills were willing to sell January/March deliveries on the basis of Rs. 13-0-0 to Rs. 13-4-0 per cwt. ex Godown, but business could not be done owing to the nervous state of the market, due to continued pressure of sales of Java Sugar at lower rates.

Shipment of Java Sugar, during September, 1934, were estimated at 126,562 tons as against 99,538 tons during September, 1933.

Stocks of all kinds of Sugar in Java, on 1st October, 1934, were estimated at 2,369,046 tons.

TEA

Calcutta, Nov. 15.

Prices of low grade tea at the last local auction were well maintained with a tendency to harden owing to diminution of stocks. Medium tea fetched rather lower levels of price. Southern Indian teas, though in demand, were sold on a bare margin of price.

The best Ceylon liquoring teas had satisfactory sales on slightly lower levels of price than at the last auction. Java and Sumatra teas of all grades were keenly competed for at dearer rates.

In connection with the scheme of the International Tea Committee to sell Indian, among other tea, to Russia under Government guarantee, details of which were given in last week's *Indian Finance,* it is interesting to note that in July last Soviet Russia purchased tea to the value of £115,500, compared with 32,500 in 1933, approximately a four-fold increase.

The production of tea in China declined in 1932 though imports in 1933 increased by about 40,000 piculs.

The following are the full particulars of Sale No. 22.

Tea with Export Rights.

	1934	1933

Java Tea

At the London auctions on November 8, 7,000 packages of Java and other teas (including Sumatra) were submitted for sale.

There was a good competition. Tippy teas were well supported; other sorts were rather irregular.

The following were the lowest prices fetched during the day's auctions:—

	Last auction lb.	To-day's auction lb.
Common Pekoe	9d.	9¼d.
Common Broken Pekoe	8⅝d.	8⅝d.
Common Orange Pekoe	10¼d.	10¼d.
Common B. O. Pekoe	9½d.	9d.
Common B. P. Souchong	9⅝d.	9⅝d.

The following are the value prices:—

Clean Common Pekoe	10d.	9⅞d.
Clean C. B. Pekoe	9⅛d.	9d.
Clean C. O. Pekoe	11½d.	11½d.
Clean C. B. O. Pekoe	9⅞d.	9⅜d.
Clean C. B. P. Souchong	9¾d.	9¾d.

TEA AVERAGE

The following were the average prices of tea in the London market during the week:—

	Last week lb.	This week lb.
Indian Tea (Northern) ...	12.33d.	12.21d.
Indian Tea (Southern) ...	11.44d.	11.62d.
Ceylon Tea	14.27d.	14.39d.
Java Tea	10.69d.	10.23d.
Sumatra Tea	9.28d.	9.28d.

Tea Quantities for Sale Next Week.

Indian 51,800 packages of which 51,000 are on Garden Account; Ceylon 19,800 packages, of which all are on Garden Account.

Indian Tea

At the London auctions on November 13, 25,100 packages of Indian tea were submitted for sale. There was an active demand at firm rates.

The following were the lowest prices fetched during the day's auction:—

Common Pekoe last auction 10½d., to-day's auction 10¾d. lb.; Common Broken Pekoe last auction 10¾d., to-day's auction 10¾d. lb.; Common Orange Pekoe last auction 10¾d., to-day's auction 10¾d. lb.; Common Broken Orange Pekoe last auction 11d., to-day's auction 11d. lb.; Common Broken Pekoe Souchong last auction 10¾d., to-day's auction 11d. lb.

The following were the value prices:—

Clean Common Pekoe last auction 10⅞d., to-day's auction 10⅞d. lb.; Clean Common Broken Pekoe last auction 11d., to-day's auction 11d. lb.; Clean Common Orange Pekoe last auction 11d., to-day's auction 11d. lb.; Clean Common Broken Orange Pekoe last auction 11⅛d., to-day's auction 11⅛d. lb.; Clean Common Broken Pekoe Souchong last auction 11d., to-day's auction 11d. lb.

MISCELLANEOUS

WHEAT

Calcutta, Nov. 15.

The local market is under the influence of a "bullish" operation in 'Beta' which has levelled up prices generally. Calcutta's importations from Karachi which now holds about 70,000 tons are not likely to be stimulated by an enhancement of freight from that part, now that the freight war has been called off. Beta continues to display a very steady tone with buyers well in evidence.

Latest import and export figures for the three main British Indian ports for the period April 1 to October 27, 1934 and the corresponding period of 1933 are:—

Imports.

	1934.		1933.	
	Indian	Foreign	Indian	Foreign
Calcutta ...	139,991	2,968	97,318	1,976
Bombay ...	97,972	...	84,502	4,595
Karachi ...	299,541	...	186,643	...

Exports.

	1934.	1933.
Calcutta	47	46
Bombay	673	689
Karachi	8,605	305

Argentine offerings have been on a liberal scale, contrary to the expectations of operators in some quarters, but it remains doubtful still what the policy of the Argentine Government is likely to be in the near future with regard to sales of this commodity, which are in a measure under official control.

The world's wheat crop outlook has undergone no radical change, but revised figures are forecast shortly, principally relating to Australia where the harvest is reported to have been seriously affected by unseasonable weather.

GROUNDNUT

This forecast is based on reports received from the three Provinces of Madras, Bombay and Burma and the States of Hyderabad and Mysore, which together contain 96 per cent. of the total area under groundnut in India.

The total area shown in the above-mentioned tracts is estimated at 5,094,000 acres, as against 5,670,000 acres reported at the corresponding time last year. Excluding the Hyderabad State for which the area at the corresponding time of last year is not available, the present estimate shows a decrease of 26 per cent.

Weather conditions have not been favourable and the present condition and prospects of the crop are reported to be only fair. Details for the Provinces and States are as follows:—

Second Forecast, October

Provinces and States.	1934-35. (1,000 acres).	1933-34. (1,000 acres).	Increase (+) or Decrease (−) (1,000 acres).
Madras ...	1,937	3,211	−1,274
Bombay (including Indian States) ...	1,504	1,695	− 191
Burma ...	611	547	+ 64
Hyderabad ...	919	*	...
Mysore ...	123	217	− 94
Total ...	5,094	5,670†	−1,495†

* Not available. † Excluding Hyderabad.

SESAMUM CROP

This forecast is based on reports received from Provinces and States which comprise 89 per cent. of the total sesamum (Til or Jinjili) acreage in India. The returns dealt with in this forecast, however, exclude estimates for the 'mixed' crop of the United Provinces and for the late crops of Madras and Bengal.

The total area, so far reported for the present season, comes to 4,097,000 acres (including 403,000 acres for the Hyderabad State from which report has been received at this stage for the first time this year), as against 4,303,000 acres, the revised estimate at this time last year. Excluding the area for the Hyderabad State for which estimate at this time of last year is not available, the present estimate of area shows a decrease of 14 per cent.

The present condition and prospects of the crop are reported to be only fair.

Details of the area by Provinces and States are as follows:—

Second Forecast, October

Provinces and States.	1934-35. (1,000 acres).	1933-34. (1,000 acres).	Increase (+) or Decrease (−) (1,000 acres).

Air Mail Service between Calcutta and Burmah

The Post Office have now authorised the carriage of mails by the new additional service which Indian National Airways have recently inaugurated leaving Calcutta for Rangoon (via Chittagong, Akyab and Bassein. This comes into force immediately and we shall be glad if you will kindly note, that there are now three air mail services per week between India and Burmah as follows:

The I. M. A. service leaving Calcutta Tuesday and returning Wednesday (closing at G. P. O. 7 p.m. Monday).

The I. M. A. service leaving Calcutta Thursday and returning Friday (closing at G. P. O. 7 p.m. Wednesday).

The Indian Trans-Continental Airways Service leaving Saturday and returning Monday, (closing at G. P. O. 7 p.m. Friday), (omitting Chittagong and Bassein).

STATISTICAL INFORMATION

RAILWAY TRAFFIC

IMPROVEMENT IN EARNINGS; WORKING EXPENSES PROPORTIONATELY LESS

Traffic Earnings and Working Expenses

The total approximate gross earnings of all State-owned Railways for the week ending 27th October, 1934 (30th week), amount to Rs. 162 lakhs, Rs. 3 lakhs more than the figures for the preceding week and Rs. 10 lakhs more than the actuals for the corresponding week of the previous year and Rs. 12 lakhs more than the actuals for the corresponding week of 1932-33.

The total approximate gross earnings from 1st April to 27th October, 1934, amount to Rs. 49.40 crores or Rs. 296 lakhs more than the actuals for the corresponding period of the previous year and Rs. 371 lakhs more than the actuals for the corresponding period of 1932-33.

The following are the up-to-date approximate gross earnings and working expenses of the State-owned Railways from 1st April, 1934, as compared with the actuals of the corresponding periods of last year.

	Earnings.		Working Expenses.*	
Railways.	Up to 27-10-33 (in lakhs.)	Up to 27-10-34 (in lakhs.)	Up to 30-9-33 (in lakhs.)	Up to 30-9-34 (in lakhs.)
	Rs.	Rs.	Rs.	Rs.

Tirhoot and Lucknow-Bareilly ...	101	102	32	39
Other Railways ...	22	24	10	11
Total ...	4,644	4,940	2,400	2,436

* Including suspense but excluding appropriations to and from depreciation fund.

Credit adjustments to the extent of Rs. 7 lakhs (approximately) have been made in the above figure of Rs. 49.40 crores, on account of the difference between the approximate and audited gross earnings for the month of August, 1934.

A comparison with the figures of the previous week for the principal State-owned Railways shows INCREASES in the approximate gross earnings of all railways except the B. N., B. B. & C. I., Burma, E. B. and S. I. A comparison with the actuals of the corresponding week of 1933 shows INCREASES in the approximate gross earnings of all the principal State-owned Railways except the B. N., Burma, E. B. and S. I.

Wagon Loadings.

Comparisons of figures of wagon loadings on Class I Railways for the week ending 27th October, 1934, and for the cumulative period from 1st April to 27th October, 1934, with the corresponding periods of the previous year are as follows:—

During the week ending 27th October, 1934, there were loaded on the broad gauge 76,456 wagons, being 10,693 MORE than in the corresponding week of the previous year or an increase of 16.3 per cent. On the metre gauge there were loaded 42,817 wagons, being 32 MORE than in the corresponding week of the previous year or an increase of 0.08 per cent.

For the period from 1st April to 27th October, 1934, there were loaded on the broad gauge 2,262,626 wagons, being 158,406 MORE than in the corresponding period of the previous year, or an increase of 7.52 per cent., and on the metre gauge, 1,415,395 wagons, being 85,057 MORE than in the corresponding period of the previous year, or an increase of 6.39 per cent.

INDIAN CUSTOMS REVENUE

According to returns received in the Department of Commercial Intelligence & Statistics, the grand total of gross Indian Sea and Land Customs Revenue (excluding salt revenue) collected during the month of October, 1934 amounted to Rs. 5,25 lakhs as against Rs. 4,63 lakhs in the preceding month and Rs. 4,32 lakhs in October 1933. The total revenue realised in the seven months ended October 1934 was Rs. 30,19 lakhs as compared with Rs. 27,97 lakhs during the same period last year. Import duties accounted for Rs. 22,19 lakhs of this amount, export duties for Rs. 2,19 lakhs, excise duties on motor spirit, kerosene, sugar and matches for Rs. 2,99 lakhs, Rs. 1,71 lakhs, Rs. 27 lakhs and Rs. 49 lakhs respectively and Land Customs and Miscellaneous for Rs. 35 lakhs. Increases were noticeable under import duties on motor cars, cotton fabrics, kerosene, tobacco, artificial silk yarn and thread, metals other than iron and steel etc., dyes derived from coal tar, cotton hosiery, iron and steel, pneumatic rubber tyres and tubes, oils, batching, fuel and lubricating, railway plant and rolling stock, silver bullion, coin, sheets, plates and other mnufactures, cinematograph films and wireless reception instruments and apparatus; excise duties on motor spirit and kerosene also showed noticeable increases. On the other hand, import duties on sugar, silk fabrics, cotton yarn and thread, betelnuts, motor spirit, machinery, boots and shoes, tea, toys, games and sports goods, paper and stationery, liquors and species, the export duties on rice, jute, raw and manufactured and land customs receipts showed noticeable decreases.

THE WEEK IN THE EXCHANGES

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, Friday Morning.

Once again holidays intervened and business was confined to four working days only. The total turnover was therefore below normal. Money being in ample supply and owing to further strength in Indian Government Sterling Securities in London, a sharp rise was registered in Giltedge section. Jute Mills' shares remained very steady although there was not much support from outside. Cottons were again better while interests in Coals have definitely disappeared and sellers predominated. Among Miscellaneous Industrials, Electric Power Supply Companies' shares received a certain amount of support while Engineering and Sugar Mills' issues kept steady at the decline. Some revival of interest was in evidence in Tea shares towards the close.

Government Securities.—The feature of the week has been the sharp rise in the prices of Government Securities, especially 3½ per cent. Government Paper. This is accounted for, by the fact that locally money is in ample supply and it is so super-abundant in London that operators are finding it difficult to employ their funds at reasonable rate of interest.

Indian Government Sterling Securities in London showed further strength on strong buying and 3½ per cent. issue was marked up further to £98. In sympathy with the above and on account of strong speculative buying from Bombay, 3½ per cent. Govt. Paper was an excited market and at one time on Tuesday it touched as high as Rs. 94-6. At the time of writing the rate is, however, Rs. 94-1.

Other loans also followed suits. 3 per cent. Government Paper was asked for at Rs. 85-10. 3 per cent. New Loan 1941 was quoted at Rs. 100-3; 3½ per cent. Loan 1947/50 was marked up to Rs. 102-4; 4 per cent. Loan 1960/70 advanced to Rs. 108-10. 5 per cent. Loan 1945/55 changed hands at Rs. 117-14. All the medium dated Loans were very firm. 4½ per cent. Loan 1955/60 was marked at Rs. 114-2; 5 per cent Loan 1940/43 at Rs. 109-3; 5 per cent. 1939/44 at Rs. 108-4 and 5½ per cent. 1938/40 at Rs. 109-3. Short dated loans were also the turn better.

The Bank rate remained unchanged at 3½ per cent.

Fixed Interest bearing Securities.—Preference shares, on the whole, were more on offer than has been the case recently, but majority of those offering have been absorbed at full rates. Apart from Jute Mills Preference shares, a considerable number of which found buyers on the basis of Rs. 140 ex-dividend, business was reported in Bowreah Cotton 8 per cent. "A" Preference at Rs. 192 and Dunbar 20 per cent. Pref. changed hands at the same figure. A fair business was put through in New Victoria 6 per cent. Preference at Rs. 5-2. Among others, Associated Hotels 7 per cent. Preference was easier at Rs. 101; Bengal Telephone 7 per cent. Preference was marked at Rs. 15-6. Burn & Co. 7 per cent. Preference at Rs. 131 and India General Navigation and Railways 5 per cent. Preference at Rs. 125.

Only a small business was reported in Debentures. 4 per cent. 1906-36 Calcutta Municipal Debenture changed hands at Rs. 101-2 and 5 per cent. 1920/45 Sijua-Jherria Power figure at Rs. 98.

Other Investment Stocks.—Imperial Bank's fully paid up issues which was marked down to Rs. 1,590 from a quotation of Rs. 1,640 during the week end were in better demand and the rate once again advanced to Rs. 1,615. Contributories also firmed up to Rs. 405 on good enquiry from Bombay side.

Among other Bank's shares, a small lot of Allahabad Bank (ordy.) changed hands at Rs. 400. Bank of India may be placed at Rs. 120; Central Bank shares were marked up to Rs. 34-12, on better enquiry from Bombay. A transaction was reported in Bengal Central Bank's shares at Rs. 6-8 after a long interval.

Among Insurance companies shares, Concord of India Insurance made further headway and are now at Rs. 11-4 premium. Triton Insurance may be placed at Rs. 227.

A fair business was reported in Light Railways' shares. Govt. Guaranteed issues are now quoted on the basis of Rs. 86 while shares enjoying District Board subsidies are creeping up slowly but limited business was reported owing to a wide difference between buyers and sellers ideas of prices.

Cotton.—After their recent dullness, Cotton shares once again met with a good demand and rates in several instances appreciated considerably. Bowreah (ordinary) was marked at Rs. 337 while Dunbar Ordinary advanced to Rs. 156. Kesoram ordinary accounted for a fair turnover round about Rs. 4-14. Mohini kept steady at Rs. 11-2 and Benares cotton and Silk at Rs. 1-12.

Coals.—Interests in Coal shares have definitely disappeared and extreme dull conditions have obtained. Buyers are practically out of the market and sellers predominated. Consequently prices sagged considerably.

KARACHI MUNICIPAL CORPORATION

Tenders are invited for the Debenture Loan of Rs. 5.55 lakhs sanctioned under the Government of Bombay, General Department Resolution No. 9315, Bombay Castle dated 31st July 1934, for the execution of various Loan works bearing interest at 5% (payable half yearly) to be fully repaid at the end of 30 years.

INSTALMENTS

10% on application and the balance on allotment. The allotment money is payable within 15 days from date of intimation of allotment. The interest on 10% application money will run from the date of allotment and on balance from the date of payment.

Tenders for the whole or any portion of the loan in multiples of Rs. 500/- will be received up to 3 p.m. (S.T.) on Friday, the 30th November 1934 by the Accountant at the Municipal office, enclosed in a sealed cover superscribed "Tender for Loan of Rs. 5.55 lakhs"

Tender forms and other particulars available on application to the chief officer Karachi, Municipal Corporation.

E. D. SHROFF

Chief officer

For THE CITY OF KARACHI

Karachi, 31-10-34

Bengal are now back to Rs. 285; Burrakur ordinary to Rs. 13; Equitable ordinary to Rs. 24-8; New Beerbhum ordinary to Rs. 13-8 and East Indian to Rs. 17-8. Bokaro and Ramghur are lower at Rs. 8-4; Burradhemo at Rs. 4-14; Nazira at Rs. 8-2 and Talcher at Rs. 2.

Exceptionally, Amalgamated kept steady at the decline at Rs. 21-8; New Manbhoom kept remarkably steady at Rs. 49 and Pench Valley at Rs. 43-8, ex-dividend.

Although the tenders for coals for Railway requirements for 1935/36 were opened on the 12th instant, the results have not yet been published but it is rumoured that offering were on a lower basis than last year. Government's intention regarding the Restriction of output and also of reduction of long distance freight charges have not yet been known. Under the circumstances it is not unlikely that holders of coal shares have begun to loose heart.

Jutes.—Jute Mills shares kept very steady and a fair business was reported in sympathy with Hessians which ruled generally firm, owing to buying from the United States and River Plate. 9 Porter Hessians at the time of writing are quoted at Rs. 8-12 ready. Jute also kept steady at Rs. 27-6.

Howrahs after opening at Rs. 55-5 on Monday sharply advanced to Rs. 56-6 on Tuesday, when a reaction set in owing to an adverse rumour that a certain mill propose a further unsealing of 5 per cent. of the looms from 1st March, 1935 and in case of the Jute Mills Association's refusal, the mill in question will resign its membership of the Association. On the above rumour, Howrah fell away sharply to Rs. 55-14. On Wednesday, the market again steadied up and Howrah recovered to Rs. 56-4. Kamarhatty also were marked up to Rs. 550.

Clives are now quoted at Rs. 32-4, Hukumchands at Rs. 14-2; Birlas are better at Rs. 14-8 and Nationals at Rs. 25. Presidencies are marked at Rs. 5-13 and Reliances at Rs. 77-12 *cum* dividend.

A fair business was reported in Anglo India round about Rs. 420 ex-dividend and Gourebores changed hands up to Rs. 625 *cum* dividend. India accounted for a few deals at round about Rs. 342, Nuddea advance to Rs. 50-8; on the publication of its report which was well received by the market, in which although no distribution was made a sum of over Rs. 10,000 was shown at the credit of Profit and Loss Account after wiping out the huge debit balance. Bally kept steady at Rs. 197 and Lawrence was in fair demand at Rs. 523. The report and Accounts of Bird-Heilgers Group of Mills for the half-year ended 30th September, 1934, have been published and they provide a satisfactory reading. Their last dividend distribution was maintained except in case of Clive which paid Annas 12 per share against Rupee One during the last year. Among others Ganges is paying Rs. 7-8 per share of Rs. 300 each; India Rs. 9-6 per share of Rs. 375 each. Nuddea and Megna made no distribution. Fort Gloster has raised its dividend to Rs. 15 per share from Rs. 12-8 and Fort William recommended the same distribution, *i.e.*, Rs. 7-8 per share.

[*In view of the above distribution of dividends and owing to the sharp rise in the prices of Government Securities, it is unlikely that there will be any serious fall in Jute Mills shares in near future.*]

Electricals.—The easier feeling which was obtained in Public Utility Companies' shares has been arrested and buyers appeared in several instances at the lower levels now reached. Benares Electrics are now quoted at Rs. 14-2; there are sellers of Cuttack at Rs. 6-4 and buyers at Rs. 6. Mirzapore Electric were wanted at Rs. 5-12, and Muzaffer-pore at Rs. 9. Dacca may be placed at Rs. 19-12; Patna at Rs. 17; Jubbulpores at Rs. 12-8 and United Provinces at Rs. 158; Bhagalpore was enquired for at Rs. 9-8.

Apart from these a fair business was reported in Bengal Telephone Ordinary at Rs. 17-6.

Engineering.—A moderate number of dealing was reported in Engineering Companies' shares. Burn & Co. ordinary changed hands at Rs. 272; Braithwaite and Company recorded a deal at Rs. 8-12; British India Electrics Construction kept steady at Rs. 5-8; Brittania Building and Iron at Rs. 4-8 and Indian Galvanizing at Rs. 9-4. Among Iron and Steel issues Bengal Iron recorded a deal at Rs. 3-12, and Indian Iron and Steel steadied up to Rs. 6-10.

Sugars.—After their recent fall, sugars shares have recovered slightly but the total turnover was below normal. Balarampurs have steadied up to Rs. 19. There are buyers of Cawnpore Ordinary at Rs. 35-4; Carew & Co. at Rs. 20-12; New Savan changed hands at Rs. 13-12 and Samastipore Central at Rs. 12-2. Raza Sugar advanced sharply to Rs. 138 on good enquiry.

Paper shares were rather easier and there are sellers of Bengal Paper at Rs. 105 an Titaghur Paper Ordinary at Rs. 20-12. Shipping Companies shares attracted a certain number of attention. Scindia Steam Navigation recorded a deal at Rs. 15. Indian General may be placed at Rs. 108 and Bengal Assam at Rs. 209. Bengal Timber Trading was marked at Rs. 140.

Rubbers.—A slightly more interest was evinced in Straits dollar Rubbers' shares, but business was still restricted.

Teas.—A certain amount of interest was shown in tea shares towards the close of the week under review and the undertone was certainly better than for some time past. Recent tea sales in London and locally passed with a somewhat better tone although the stock figure up to the end of October is abnormally high. This rumoured that the next year's export quota will be fixed at Rs. 82½ per cent. and if the above rumour comes out true, it will surely give a fillip to the Industry. This with the proposed sale in Russia if materialises, a definitely better market for Tea is confidently expected.

We are informed that the reports of certain arrangements between the Imperial Bank of India and the Mercantile Bank of India are wholly incorrect. We regret the publication of these reports and afford full publicity to the contradiction.

MADRAS STOCK EXCHANGE

(*By Wire*)

Thursday Evening.

Government Securities.—The Securities market was buoyant responding to higher and higher sterling advices, with 3½ per cent. Paper closing firm at Rs. 95-4. 4 per cent. 1960-70 Loan have been a firm feature at Rs. 108-14 which is a rise of nearly a point and half since we sent in our last report. 3½ per cent. 1947-50 Loans has been done up to Rs. 120-4 closing steady. 5 per cent. 1945-55 Loan and on the other medium-dated loans have been a popular feature and closed better. Mysore Government Securities have a popular feature and closed better. Mysore Government Securities have been done at the same rates but as usual these take time to reflect the higher prices of the Government of India securities. *3½ per cent. Mysore State loan at the current price of Rs. 103 and 4 per cent. 1953-63 at Rs. 108-4 are likely to show greater appreciation in the course of a few weeks.* The other Mysore loans remained steady. Cochin loan has been enquired for at Rs. 110-4 with little offering.

Debentures.—Business has been negligible in Port Trust and Municipal Debenture, due more to want of sellers than a paucity of buying.

The enquiry amongst Joint Stock Company Debentures, Nilgiri Neerugundi 7½ per cent. Debentures have been done at Rs. 101 with buyers over. A good enquiry has resulted for the 4 per cent. Land Mortgage Debentures which are about to be issued probably at par about the first week of December. Amongst Preference shares, Tata Iron and Steel 2nd Preference shares have been a remarkable feature for a rise of nearly 7 points in a fortnight locally. Both issues of Spencer and Company have been a firm market at Rs. 10-8 and Rs. 12-2 for buyers, with sellers uninterested. Vasanta Preferences have been bid up to Rs. 103 without attracting sellers. *We consider these shares to be a cheap fixed interest security, likely to yield a steady dividend with chances of capital appreciation.*

Banks.—Imperial Bank of India shares have rallied to Rs. 1,610 for fully-paids, after touching Rs. 1,622 and Contributories quote Rs. 405 receding from their high quotation of the week, of Rs. 410. Central Banks have been a popular feature, with business done up to Rs. 34-12. Locally, Indian Banks have risen to Rs. 121-8 and look like moving up further due to good buying enquiry, being unsatisfied at the close. Indo Commercial Banks were popular at Rs. 85, with several transactions done at this price. Stray business passed in Travancore National Banks, Bank of Hindusthan shares, Mysore Banks, and Bangalore Banks.

Public Utilities.—Considerable business passed in Vellore Electrics, West Coast Electrics and Rangoon Telephones at quoted levels. Tata Powers were a feature. *Our Recommendations in Tata Powers were more than justified by a rise of 50 points to-day, closing at Rs. 1,360. We expect further improvement in these shares.*

Mills.—This section was brighter with the possible exception of Buckingham and Carnatics, which dropped down to Rs. 211 at the close. Cambodias and Sitarams attracted buyers around current prices. Premier Hosiery Works (ordinary) shares were done at par.

Cements.—This section was dull till yesterday, but prices recovered to-day with Punjabs quoting Rs. 24. *We favour a purchase of these shares around current price for appreciation.* Locally, Coimbatore Cements were a steady market at Rs. 167.

Sugar.—Weak advices from Calcutta in this section had no reflection on the local market, as Deccan Sugars big shares improved further to Rs. 290 and the small to Rs. 72. India Sugars, however, weakened to Rs. 11-8 at the close, due to profit-taking. *We expect these shares to quote higher in the following months.*

Miscellaneous.—Tata Iron and Steel Ordinary shares, after being done as low as Rs. 87-8, recovered to Rs. 94-8 at the close. *We think there will be appreciation in these shares.*

BOMBAY STOCK EXCHANGE

(By Wire)

(From Our Correspondent)

Friday, evening.

Money Market:—Call money was quoted ¾ per cent.

Exchange Market:—Bank's selling T.T. 1/6 1/32; November-February; Bank's selling 1/6 March-June; Banks were buying 3 months bills at 1/6 1/8 for November-March. The market was steady.

Securities:—3 per cent. 1941 Rs. 100-3; 3½ per cent. Rs. 94-11; 3½ per cent. 1947-50 Rs. 102-3; 4 per cent. 1943 Rs. 105-4; 4 per cent. 1960-70 Rs. 108-13; 4½ per cent. 1955-60 Rs. 113-14; 5 per cent. 1935 Rs. 101-11; 5 per cent. 1940-43 Rs. 109-1; 5½ per cent. 1938-40 Rs. 109-1; 6½ per cent. Treasury Bonds 1935, Rs. 102-13; 5 per cent. 1945-55 (tax free) Rs. 117-11; 6½ per cent. Bombay development loan Rs. 103-13. Securities were firm.

There was no business in share section for two days owing to the elections.

Textiles:—There has been an improvement in textile shares: Bombay Dyeings Rs. 902-8; Centuries Rs. 316-4; Central Indias Rs. 323-2; Colabas Rs. 135; Gokaks Rs. 171-4; Morarjis Rs. 1,540; Swadeshis Rs. 233-12; Vishnus at Rs. 1,585.

Hydro Electrics:—A substantial rise was recorded especially in Andra Valley shares. Andra Valleys were quoted at Rs. 1,650, Tata Powers at Rs. 1,361-4. Tata Hydros at Rs. 161-14.

Cements:—Bandis at Rs. 32-8; Gwalior Cements at Rs. 102-8; India Cements at Rs. 338-12; Okha Cements at Rs. 175.

Banks and Insurance:—Imperial Bank fully-paids were quoted at Rs. 1,605; partly paids at Rs. 405; Barodas at Rs. 101-8; Bank or Indias at Rs. 119; Central Bank at Rs. 34-8; Unions at Rs. 5-4.

Oriental Life had risen up to Rs. 3,960, New Indias had improved to Rs. 38 and Valcuns at Rs. 8-6.

LONDON STOCK EXCHANGE

On the Stock Exchange during the week under review there has been a regular boom in gilt-edged securities. Renewed activity in gilt-edge was the most notable feature on Saturday, Home Funds especially being in demand. Consols changed hands at a new record price of 86½. Indian Loans were steady with few price changes.

The above market was greatly stimulated by the lower rate for Treasury bills and by the banks, reduction of the rate for discount loans. There was feverish speculative buying and this led to diversion of buying to Home Railway Stocks and electric light and power group, brewery, tobacco shares and many coal, iron and steel shares.

On Monday gilt-edged securities continued to soar high under an avanlanche of general buying, Consols being higher at 89. Speculators credited Government with the intention of working towards a two and a half per cent. basis. The determination of Government to maintain plethoric conditions of short-term money is evidenced by the decrease in outstanding Treasury bills as compared with last year and shortage of bills is increasingly forcing banks and discount houses into long-term gilt-edged securities.

On Tuesday the activity continued but some profit-taking was in evidence which tended to check further price advances.

On Wednesday following the announcement that the Treasury had decided to increase the amount of the annual drawing of 3 per cent. Treasury bonds from 10 to 40 per cent. there was a fresh burst of strength in British Government Stocks. Gilt-edged securities opened buoyantly and quickly established fresh high records. War Loan 3½ per cent. after rising to 107½ reacted to 107⅛. Consols 2½ per cent. were quoted at 90¼. Other Government stocks and local loans changed hands freely at higher prices. Indian Stocks continued strong notably 2½ per cent. at 79.

On Thursday there was no sign of diminution in activity and there was an all-round advance in prices, 2½ per cent. Consols being quoted at 92¼ and Victory Bonds at 119½.

Among other sections Tea and Rubber shares showed an advancing tendency and maintained the improvement but towards the end they were weaker. Kaffirs were irregular at first but later on showed a decided recovery. Other Minings were steady. Oils were steady and rather quiet. Tobaccos were fluctuating. Home Rails were in favour especially Great Western Ordinary and Southern Deferred. Other industrials were firm.

For fuller treatment of gilt-edge and gilt-edge prospects see World of Indian Finance page number 1210.

COMPANY REPORTS

HOWRAH MILLS CO., LTD.

The Directors beg to submit the Audited Accounts for the half-year ended 30th September, 1934.

Including the sum of Rs. 3,06,365-0-3 brought forward from the previous half-year and deducting overdraft interest and all other charges, there remains a balance of Rs. 9,66,121-8-1 for disposal. From this sum there has been set aside of Rs. 1,00,000 to Depreciation and with the balance of Rs. 8,66,121-8-1, it is proposed to deal as follows:—

	Rs.	A.	P.
To payment of a dividend on 8,750 Preference shares at the rate of 7 per cent., per annum, free of income-tax	30,625	0	0
To payment of a dividend on 17,500 "A" Preference shares at the rate of 7% per annum, free of income-tax	61,250	0	0
To payment of a dividend on 262,000 Ordinary shares at the rate of Re. 1-12-0 per share for the half-year, free of income-tax ...	4,59,375	0	0
And to carry forward the balance of ...	3,14,871	8	1
Total ...	8,66,121	8	1

Jute stocks have been valued at or under cost prices and stocks of goods at contract rates.

During the period under review the Mills have conformed to the regulations of the short-time Agreement decided upon by the Indian Jute Millls Association and have worked 40 hours weekly, with the requisite quota of looms sealed.

On application Dividend warrants will be made out in favour of shareholders whose names are in the Company's Books on 1st November, 1934, or their Attorneys authorised to receive them.

A. R. Mellis, W. M. Craddock, C. G. Arthus, G. L. Scott, R. W. Weir Paterson—Directors.

Jardine Skinner & Co.—Managing Agents.

FORT GLOSTER JUTE MANUFACTURING CO., LTD.

	Rs.	A.	P.
The Directors beg to submit the Audited Accounts of the Company for the half-year ended 30th September, 1934, which after writing of for Depreciation Rs. 1,75,000 show a profit of	2,60,444	8	5
To this has to be added the balance brought forward from the last account, namely ...	14,988	3	3
Total ...	2,75,432	11	8

The Directors recommend that this should be dealt with as follows:—

To paying a dividend on the Preference shares at Rs. 3-8-0 per share (*i.e.* 7% per annum), free of income-tax	49,000	0	0
To paying a Dividend on the Ordinary shares at Rs. 15 per share (*i.e.* 30% per annum), free of income-tax	2,10,000	0	0
To carry forward	16,432	11	8
Total ...	2,75,432	11	8

In accordance with the Agreement amongst the Members of the Indian Jute Mills Association the Company's Mills have worked 40 hours per week throughout the half-year with 15 per cent. of the total complement of looms sealed. Following a decision of the Association, however, reached at a meeting held last April, 2½ per cent. of the looms hitherto sealed, are to be restarted from the 1st of the current months and the results of this step will be watched with interest.

As anticipated in our last last report, trading conditions during the period under review have been very similar to those experienced during the previous half-year, but it is satisfactory to be able to record that stocks of manufactured goods both in Calcutta and at the principal consuming centres are not unduly large.

With regard to prospect in the immediate future, in view of the very unsettled state of Europe and the confused business conditions prevailing in America, the outlook is anything but certain. And the position is further complicated by the fact the Government of Bengal through the Agency of a special Officer have decided to launch an intensive campaign with the object of inducing the cultivators to reduce the quantity of raw jute grown in the province. No legislative action is contemplated as the basis of the scheme is voluntary, but the Government

intend before the next sowing season to undertake the hazardous task of indicating the degree of restriction considered desirable.

V. H. MacCaw, G. L. Scott—Directors.

GOUREPORE CO., LTD.

	Rs.	A.	P.
The Profit on Revenue Account is ...	5,64,545	5	2
Add, the balance brought forward at credit of Profit and Loss Account ...	4,41,681	8	9
Dividends forfeited	360	0	0
Dividend from Gourepore Electric Supply Company	50,250	0	0
Interest	49,547	15	11
Total ...	5,41,839	8	8
Leaving at credit of Profit and Loss Account	11,07,384	13	10
The Directors recommend that this be disposed of as follows:—			
By payment of a Dividend on Preference shares at 6% per annum, free of Income-tax	79,500	0	0

By Payment of a dividend on Ordinary shares at 50% per annum, free of Income-tax.	6,00,000	0 0
Total ...	6,79,500	0 0
Leaving to be carried forward at credit of Profit and Loss Account	4,27,884	13 10

Investments:—During the half-year, the Government Securities which the Company held stood at very high premiums in the market. The Directors decided to take advantage of those premiums and to realise the Company's Securities for re-investment in the New Loan 3½ per cent. 1947/50. The Debentures of Nuddea Mills Co., Ltd., which the Company held and all the Government Securities with the exception of 1½ lacs, 4½ per cent. Loan 1955/60 were realised and the proceeds re-invested in Rs. 22½ lakhs, 3½ per cent. Loan 1947/50 at a value of Rs. 99 per cent. The Directors have disposed of the Profit on the conversion as under:—

To write down the book value of the Investment in Gourepore Electric Supply Co., Ltd., by Rs. 3-8 per share, leaving the valuation at Rs. 96-8 per cent. Rs. 1,17,250 to make up the Investment Depreciation Reserve Account to Rs. 2 lacs, Rs. 12,397-9-0, total Rs. 1,29,647-9-0.

The Gourepore Electric Supply Co., Ltd., during such time as the Mills are working short time is unable to pay a larger dividend than 3 per cent. per annum and the Directors for this reason are of the opinion that it would be a sound policy to write down the investment to below par value.

Stocks:—The stocks of the Jute and Linseed have been entered at or under cost prices and the stock of fabrics at contract rates.

Hours:—The Company's Mills continue on the single shift system and in accordance with Indian Jute Mills Associations' agreements worked 40 hours per week with 15 per cent. of total looms sealed.

KINNISON JUTE MILLS CO., LTD.

The Directors beg to submit the Audited Accounts for the half-year ended 30th September, 1934, which after allowing for interest, commissions, show a profit of Rs. 2,83,621-12-9. To this has to be added the balance of Rs. 5,60,661-0-9, brought forward from last half-year, making a total of Rs. 8,44,282-15-6.

The Directors propose to dispose of this as follows:—

	Rs.	A.	P.
In paying a dividend on the Preference shares at the rate of 7 per cent., per annum, free of Income-tax	52,500	0	0
In paying a dividend on the Ordinary shares at Rs. 15 per share, free of Income-tax	2,25,000	0	0
In carrying forward	5,66,782	15	6
Total ...	8,44,82	15	6

The jute in stock has been taken at or under cost price and the manufactured goods at contract rates.

In accordance with the Agreement entered into by all members of the Indian Jute Mills Association, the mills have worked 40 hours per week during the period and 15 per cent. of the total looms have been shut down.

With effect from the 1st November, 1934, Mills in the Membership of the Indian Jute Mills Association, will work 40 hours per week with 12½ per cent. of the total looms shut down.

During the half-year although world stocks of hessian, have been reduced values have depreciated very considerably. This is not unhealthy as it may mean the retention of a larger proportion of the world's business by Calcutta mills. Stocks of Heavy goods remain practically unchanged during the period under review but show a large reduction in comparison with the position at the same time last year. Prices have appreciated to a small extent. The outstanding feature in Heavy goods has been the satisfactory demand for Heavy Cees from Burma and the Far east. On the other hand business in Australian cornsacks has been disappointing. Prospects for the current half-year are satisfactory but for the future are obscure being still dependent upon world trading and political conditions, which remain uncertain factors.

The Government are now taking steps to bring about a voluntary restriction of the jute crop. This will be no easy matter, but a really determined policy, supported by the united backing of the educated and money sections of the people, is in our opinion capable of achieving good results. Excessive restriction, would have a bad influence upon the world consumption of jute, but in our opinion there is little danger of the price advancing too far owing to the large visible supplies of raw material and the inherent difficulties of voluntary restriction. The company, therefore, will cordially support the policy of the Government.

E. C. Benthal, W. M. Craddock, G. L. Scott—Directors. F. W. Heilgers & Co.—Managing Agents.

SOUTH KARANPURA COAL CO., LTD.

The Directors beg to submit the Audited Accounts for the half-year ended 31st August, 1934.

Market:—The coal market continues in a depressed condition and during the greater half of the period under review, raisings have been on a restricted basis.

Development:—Underground development of the mine has been well maintained during the half-year.

Health of the labour force has on the whole been good.

Account:—The Profit and Loss Account including the debit balance of Rs. 20,618-5-2, carried forward from last half-year shows a loss of Rs. 23,314-4-7, which is carried forward.

The Managing agents have, again, waied their right to remuneration.

E. C. Benthall, D. H. Wilmer, K. J. Nicolson, W. M. Craddock, S. K. Bhatter—Directors. Bird & Co.—Managing Agents.

WORLD OF INDIAN FINANCE

Friday Evening.

Money conditions have been even more easy this week than during the last. Funds are practically unlendable and the prospects are that they will continue in this state till at least about the middle of December. The circumstance that London rates are far cheaper suggests the possibility that Exchange Banks might try to bring funds from London for investment in India's Treasury Bills. As a matter of fact, the investment of London funds in Treasury Bills during the last few months has been more than the market has generally believed. Some banks are known to have done the greater part of their business in this direction ; but it is doubtful if this policy can be continued indefinitely. So far as the present rate is concerned, the fall in the average rate of Treasury Bills discounts from Rs. 1-7-10 to Rs. 1-7 per cent. must have come as an unwelcome surprise to those who have tried to invest London funds in India's Treasuries. This has cut the profits very fine ; and if there should be any further progress in the lower trends of Treasury Bills discounts, it might be altogether impossible to get funds from London for investment in Government of India's short-term bills.

On the basis that the present money conditions will not be affected considerably either way by the influx of foreign funds, it may be useful to peer a little into the future of money rates in India. For the present the giltedge and stock markets form the principal venue for surplus funds, and they will continue to be so so long as the trade demand does not grow to appreciable proportions. What chances there are of trade expanding to the point of making a considerable demand on the surplus resources of the market, it is at all times difficult to say. But one may venture to suggest that it will not be quite safe to judge the requirements of trade solely by the conditions of the moment. For all available evidence suggests the possibility that even within what is normally called the busy season there are sub-divisions, which it will be well to take into account. It may be suggested that in the middle of the so-called busy season there is a comparatively slack period. September usually sees the end of the dull season and the beginnings of increased export activity. The period from September to about the first week of November may be said to be the first of the three periods into which the busy season may be divided. There is again a resumption of marked export activity from the end of December ; and this extends to the end of February. In between is a period which is characterised by lesser activity than the period before and after. In this view, one may naturally expect trade to be comparatively at a low ebb during the present tune ; and one ought to take into consideration the possibility of expansion of trade demand as we go further into December. It may, therefore, be said that the chance of improvement in trade demand cannot be altogether ruled out on the basis of the present conditions. But till such time as such expansion occurs—and such expansion in the present outlook of trade is extremely problematical—money conditions are bound to continue as easy as at present with obvious consequences on other departments of trade and finance.

The results of the Treasury Bills tenders during this week are quite up to expectations. The most notable of them is the fall in the average rate of accepted tenders from Rs. 1-7-10 per cent. to Rs. 1-7 per cent. We had in former issues pointed to the fact that the Treasury Bills of earlier weeks were not quite in consonance with the conditions prevalent in the money market and that the higher level was possible merely because of the somewhat exaggerated notions that the market had of the needs of the Government in this period. The increasingly easy money conditions have at last told on rates, with the result that during this week the average rate has come down by as much as 10 pies. The greater volume of surplus funds is seen also in the larger applications on the tender day amounting to Rs. 374 lakhs as compared with Rs. 291½ lakhs last week and Rs. 184¼ lakhs in the week previous. As we pointed out last week, the excessive maturities of Treasury Bills during this period have also led to a larger volume of sales of intermediate bills, amounting to Rs. 185½ lakhs as compared with Rs. 13½ lakhs and Rs. 42 lakhs in the two weeks previous. It may be said that in the coming week also sales of intermediates will show no falling off. Though, the heavy maturities and the pronounced increase in the floating balance of the market have, indeed, had a

great deal to do with the fall in rates, we prefer to believe that the fall in the average rate of accepted tenders last week to Rs. 1-7-10 per cent. from Rs. 1-7-11 of the previous week has had its natural psychological effect in persuading the market that there is no unbroken rise in Treasury Bills discounts in store for them and that, there was nothing to be gained by postponing the offtake of intermediates.

It is interesting to watch the adjustment of the ways and means position in the middle of November, a period for which the Government had prepared from a long time ahead, as being one of exceptionally heavy maturities of Treasury Bills. Our Treasury Bills tables will show that in the week ending November 13 the excess of maturities of bills over sales amounted to over Rs. 3½ crores. During this week also there is a similar, though much smaller, excess of about one crore. It is against the contingency of this unbalanced position between Treasury Bills sales and maturities, that the Government continued to sell Treasury Bills for large amounts from the middle of September. But these sales have not obviated the Government taking recourse to the Ways and Means Advances from the Imperial Bank of India to the extent of Rs. 4 crores which is divulged in the statement of the Bank for the week ending November 16. It is significant that after this advance from the Bank Public Deposits on November 16, stood at Rs. 6,71.90 lakhs against Rs. 6,83.12 lakhs in the previous week. The high watermark of Public Deposits in recent weeks was touched in the week ending October 26, when Public Deposits stood at Rs. 9,30.59 lakhs and in the subsequent week it fell to Rs. 7,48.70 lakhs. These changes ought to be explained largely by the fact that on November 1 Government should have had to make the payments usual to the beginning of the month and in addition to this there were also the payments of interest to be made on the Rs. 36.53 crores of 3½ per cent. Paper on November 1. Likewise on November 15, the Government had to make the half-yearly interest payments on the 3½ per cent. 1947-50 loan amounting to about a crore. The interest payments and the maturities of Treasury Bills together explain the necessity for the Ways and Means Advances. There is also the fact that this is the period of the year in which the incomings are not equal to the outgoings on Treasury account.

As for the future of Treasury Bills rates, it would appear that there is not much of a decline in prospect. For, with this week, the period of exceptionally heavy maturities comes more or less to a close; and maturities during the month of December amount to only Rs. 9 crores, there having been only one instalment of intermediates to mature during the month in addition to the weekly sales. The maturities during January are slightly higher at about Rs. 9½ crores. It is, therefore, idle to expect any appreciable decline in Treasury Bills rates on the ground of heavier maturities of bills. For the present, the payments which the Treasury has made to the market on account of the excess of maturities over sales, which on our computation amounts to about Rs. 4 crores, will continue to exert its influence. It seems, on the whole, safe to say that there is no prolonged decline in prospect. At any rate, a rise in the yield on Treasury Bills might be ruled out, and this points to the possibility of foreign funds being exported into India though hardly in large amounts for the sake of investment in India's Treasuries.

The giltedge market was steady during the week, and the prime motive power must be found in the persistently easy money conditions. What is more about the giltedge market now is that it has survived what was generally regarded as an ordeal. Certain sections, both in the markets and outside, apprehended that the publication of the report of the Joint Parliamentary Committee on Indian Constitutional Reforms would administer an untimely shock to the giltedge market. The reasoning behind this apprehension is obvious. It was feared that the reactionary nature of the recommendations of the Parliamentary Committee might give rise to political agitation in India with its obvious significance to the stability of giltedge values. But this apprehension was by no means widespread. The markets have always an uncanny way of interpreting political events in so far as they are interested in them. And in India, it should not be difficult to see that the lull in political activity and agitation is too deep-rooted to be reversed even by the report of the Joint Parliamentary Committee. The markets could not have missed this fact; and the event shows that the market judged the political situation aright. There can be no doubt that it will be sometime before the Congress or any national party can get into stride; and even then it might be taken for granted that it will not be such as to unnerve the investors in giltedge. 3½ per cent. paper is quoted Rs. 95 at the time of Friday's closing. This shows that the market has stood up to the shock of the Report. More than this, it is not possible to claim for giltedge at the moment. Though the general outlook is not changed, it is still necessary to point out that during the week other sections of the stock exchange have begun to compete with giltedge for the affections of operators. There are brokers, who take the view that, though there is nothing to feel nervous about in giltedge, it is prudent to take the profits at present levels. It remains to be seen how many would act on such advice. Unless London starts working out to its logical consequences the present outlook of money and trade as regards giltedge, Indian Government securities might conceivably remain in the present levels for sometime.

The exchange market during the week continued to be dull and stagnant. A few more of bills were showing but at very fine rates. The drop in Treasury Bills rates has affected even that volume of business

(continued on page 1305)

BANKING:

It is sometimes said that, in speaking of simple transactions, Bank officials are prone to use terms which, far from being enlightening, are calculated to make confusion worse confounded in the ears of the customer seeking an explanation why he should do this or not do that. Branch Managers of Lloyds Bank are always willing to explain to customers and others the "Why and the wherefore" they should do a thing one way in preference to another.

Thursday evening.

The news, that *The Statesman* affords that, according to a correspondent of the *Daily Telegraph*, the United States recently granted a credit of £5 million to Belgium to prevent her being forced off the gold standard is the latest confirmation of a change that has been occurring over international finance in recent months. It means that the Gold Bloc, in which it is not customary to include America, need not rely for the maintenance of the gold standard on its own members alone. For estimating the future of the gold standard in international currencies, one had formerly to look to the strength and the intrinsic position of the gold standard countries and the extent to which they are determined to help each other in what was regarded as a common responsibility. The Gold Bloc Conference, strangely enough, somewhat weakened the impression of solidarity in the Gold Bloc. It is reported that France did not fulfil the expectations of help which Belgium entertained and that to that extent the position of the latter country was considerably weakened. This increased the bearish sentiment in regard to the gold currencies ; and the chances of a crisis in the Belga with possibilities of its extending to other currencies were believed to have been increased.

It may be said that during the last few weeks there have been a number of circumstances tending to weaken the bearish outlook of the gold standard currencies. One is the attitude of America to the question of maintenance of the gold standard. The other is the settlement of the French political crisis, and, what is more, the spectacle of a ministerial crisis in France leaving the franc more or less unaffected. The third is the appreciation of the generally strong position of Belgium and the receipt by her of help from America. It is now learned that the resignation of M. Doumergue had little or no effect on the franc. At the time the rumours of the ministerial crisis spread over Europe there was, indeed, a little nervousness. But when the resignation actually came about, the knowledge gained ground that the crisis had no monetary significance. And finally when M. Flandin succeeded in establishing his ministry and reiterated his faith in the financial and economic policy associated with M. Doumergue, the position of the franc was fairly well above fear.

As regards Belgium, the intrinsic position of her currency was never seriously weak. As in France, so in Belgium, the principal matter of concern was the national budget. It is now clear that the Belgian Government has balanced the Budget for 1935, with an estimated surplus of 150 million f. Official salaries, allowances for employment, expenditure on defence, education and public works have all been made to contribute to the economies necessary. And there can be no doubt about the Cabinet being able to enforce these economies for Parliament has granted special powers to the Cabinet for this purpose. Another important respect in which the demand for devaluation has been weakened is the formation of the National Industrial Credit Company, which has the power to issue bonds of securities up to 2,000 million francs guaranteed by the Governments. These bonds are to bear interest at 3 per cent. and will be repayable in twenty years. The object of this Credit Company is to liquify the frozen credits of banks and enable them better to stand the privations of continuing on the gold standard. It was urged by the supporters of devaluation that, so long as Belgium continued on the gold standard, agricultural and industrial institutions will be unable to return the credits they have borrowed from the banks. The Belgian Government have now endeavoured to take the wind out of the sails of devaluationists by establishing an institution, which will issue these bonds in exchange for industrial, commercial or agricultural loans which, for the present, cannot be liquidated owing to the economic crisis. Once this company gets into stride, there will be no further cause for uneasiness amongst credit institutions.

From the standpoint of the equilibrium of foreign payments, the Belga to-day is not much worse than before. The gold reserves still stand at a high figure, though in the times in which we live no amount of gold reserve can be considered adequate for the maintenance of a currency in face of really adverse circumstances. The real strength of the Belga to-day would rather be the determination of the United States of America that the gold standard countries should not be easily pushed off gold. The motive of this policy has been already dealt with in these columns. America is interested in foreign nations continuing as long as possible on the comparatively over-valued currencies. Formerly, when further devaluation of the dollar was not so much out of the question as it is to-day, the American policy perhaps, had been different. But now that, owing to the combination of a number of circumstances, America has been obliged to give up, or at least to postpone, a further reduction of the value of the dollar, it has become necessary for her to see that there are no further defections in the Continent of Europe from the cause of the gold standard. Though the movement for devaluation in Belgium has been going on for sometime, it is important to remember that all the parties on the Continent have repeatedly shown their attachment to the gold standard and the present parity and that among its strong and able supporters is M. Vandervelde, the leader of the Opposition. The proportion of exports to imports has recently been 90 per cent. for the first nine months in the year. This, together with the balancing of the budget recently assured and with the position of the gold reserves puts the position of the Belga in a very favourable light.

Despite everything that might be said of the improvement of the outlook of the gold currencies, it still remains true that the greatest strength at the moment lies in the offer of support from America. It has been adequately pointed out by *The Statist* in its International Banking Number that the American monetary policy had played an appreciable part in consolidating the position of the gold currencies. The fact that American support has achieved for the present what the declaration of the Gold Bloc failed to attain is very significant. It means that, whatever the technical position of the gold currencies might be, foreign support is still essential for their maintenance. The feeling has gained ground that the gold currencies cannot hold unless the more fundamental adjustment between costs and prices are affected. The confidence in a currency cannot be maintained merely by the figures of the gold reserve. For the public to feel assured of the stability of the currency, it is necessary that they shall feel convinced that there are no serious maladjustments. And such a belief cannot be imparted unless costs in the gold standard countries are reduced. But, as *The Statist* pointed out, there is a physical moral limit for deflation and it has been very nearly, if not completely, reached by the Gold Bloc.

PUBLICATIONS OF THE LEAGUE OF NATIONS

JUST OUT; "STATISTICAL YEAR-BOOK OF THE LEAGUE OF NATIONS" 1933-34

270 pages ... ... in wrappers Rs. 6 14 0
in cloth Rs. 8 8 0

This is the most complete and authoritative international compilation of official statistics regarding the economic, financial and social activities and the population of all the countries of the world.

These statistics including Vital Statistics, Labour Conditions, Production, International Trade and Balances of Payments, Transport, Public Finance, Monetary and Banking Statistics, Prices, Conversion coefficients for weights, measures and currencies, have been brought up to the end of 1933 or the beginning of 1934 and have been reduced, whenever desirable, to a common measure.

The present edition marks an improvement on its predecessor in the abundance of its information on various matters of great topical interest, such as public finance and the distribution of population by age, groups and occupations, etc. Another new feature consists of the tables on the production and use of nitrogen and of index-numbers of employment.

"REVIEW OF WORLD TRADE", 1933

A presentation and analysis of world trade in 1933 — about 60 pages ... ... Price Rs. 1 12 0

This volume compares the trade of the world of continental groups and of individual countries in 1933 and in recent years. It shows the contribution of each country to the total, the changes in the direction of trade and in the relative importance of the groups of commodities of which it is composed. The analysis demonstrates that, while the value of trade diminished again in 1933, the quantum increased, mainly owing to the larger exports of raw materials; exports of manufactured products were, however, also slightly higher than in 1932. Special attention is devoted to the trade in the most important crude materials and foodstuffs. An annex contains revised indices of the prices and quantum of the trade of individual countries.

Complete catalogue sent free on application.

TREASURY BILLS.

The Controller of the Currency notifies that tenders for Rs. 1½ crores of three months' Treasury Bills were opened on Tuesday, November 20. The total amount offered was Rs. 3,74,00,000. Tenders at Rs. 99-10-3 were allotted approximately 66 per cent. Lower tenders were rejected. The total amount accepted was Rs. 1½ crores, the average rate of accepted tenders being Re. 1-7-0 per annum.

Tenders for Rs. 1½ crores of three months' Treasury Bills will be received on Tuesday, November 27. Successful tenderers should make payment on Friday, November 30. Other conditions are as usual.

Three months, intermediates will be sold from November 21 to 26 at Rs. 99-10-6 per cent. subject to the conditions previously announced.

Three months' intermediates sold from November 14 to 19 amounted to Rs. 1,85,50,000.

STERLING TENDERS.

The Controller of the Currency notifies that on Wednesday, November 21 tenders to the amount of £75,000 at 1s. 6 1/16d. were received and allotted in full.

£1 million will be offered for tender on Wednesday, November 28 on the same conditions as previously announced.

THE IMPENDING REFORMS

The report of the Joint Parliamentary Committee which, after an usually long period of incubation, saw the light of day on Thursday last, is evidently meant to be the last word on the subject of Indian constitutional reform. The British Parliament, it is true, is yet to give legislative sanction to the recommendations of the Committee ; but that is a formal affair, seeing that the Committee was elected by both Houses of Parliament and the opposition of powerful groups of Conservatives to the White Paper proposals has not been without its effect on the Committee's recommendations. The authorities in India, assuredly, expect the Indian public, and the press in particular, to regard the report as a definitely formulated constitution and to offer criticism, if any, from the more or less technical standpoint of constitution-making. In this, the authorities are bound to suffer a grievous disappointment. India has not been persuaded that the stage of technical criticism has yet arrived. The essential preliminary of any constitution is that those, who are concerned with it and whom it affects, agree on the basic principles and consent to have their affairs discussed and settled from time to time within the framework of that constitution. Every constituion worth the name implies that the people who have to live under and work the constitution are agreed on the crucial question of the repository of ultimate authority. Without that agreement, implicit or explicit, the elaborate framework of the State becomes only an imposition and not a constitution as it is understood in the terminology of democratic politics.

* * *

The value of such agreement to political growth is obvious. For, given such agreement, it becomes possible to lay down the rules of the political game. Politics is essentially the art of resolving the conflict of interests and opinions within a society, without jeopardising civil peace. Every interest, every standpoint stands or falls by its ability to persuade the majority that it is in the larger interest of the whole. No constitution, however devised, can in itself form the solution of all outstanding political issues. A constitution can only lay down how those issues shall be tackled, and what the process of settlement shall be. The wisdom of a constitution lies in devising checks on the absolute authority of the sovereign power, whether it be a king or a popular majority, and providing for the less powerful the means of persuading the sovereign to their will.

* * *

How has the Report of the Joint Parliamentary Committee solved the crucial problem and how has it provided for the progressive settlement of the minor problems ? It is obvious that to this Committee the former question is far from being an open one. The ultimate authority of Parliament in matters affecting India is unquestionable and inviolate. The present reforms are only an experiment, and action on its results is reserved for the Parliament. The talk of Dominion Status is for India only a regretful memory. The term is not even mentioned in this lengthy report ; and those in England, who had fought against it, have now the satisfaction of seeing that the term has been dropped altogether. The minor political issues—such as the place of minorities, the rise of new provincial units, the balancing of the forces of conservatism and progress represented in the richer and poorer classes—have been settled beforehand as preliminaries to the inauguration of a constitution.

* * *

In our view, a constitution is wisely devised only when it does not stek to settle such questions beforehand, but only attempts to provide for their peaceful and progressive settlement. For such settlement imparts a dangerous rigidity to the constitution and an even more dangerous intransigence to sectional interest whilh ought to be allowed to find, in sourse of time, their proper plale in the lonstitution. It is not to be expected, for instance, that the classes, which will soon be fortified in an upper chamber in Bombay and Madras, will, of their own accord, consent to surrender their vantage. Nor would Muslims be easily persuaded of the advantage to themselves and the nation of the obliteration of communal distinctions and the growing fusion of all classes. Minorities can be as tyrannous as majorities, when they are made to feel that they have a position of tactical importance. In all popular legislatures where the two major parties are more or less balanced, a small third party has always been able to extort unconscionable concessions. In India the majority has been during these years reduced to a position of abject helplessness in relation to the various sectional interests, each whetting its knife to extract its pound of flesh. Even within the Hindu majority new divisions have been cut into. Provinces like Madras and Bombay, where political life has been, generally speaking, running on more healthy lines, are to have a Second Chamber. That is, interests, which have till now had no identity of their own apart from the large mass of people, are to be encouraged to develop a sectional consciousness.

* * *

Thus the constitution which the Joint Parliamentary Committee has recommended for India is a negation of all the principles implied in the term. It does not betoken in any sense or to any degree the sovereignty of the people. The Legislatures are not to have the final say even in the impossible contingency of these discordant elements developing the voice of harmony. It settles in the most rigid manner questions which it should be left for the future to tackle, stage by stage. It renders wellnigh impossible the healthy political life which makes for an orderly conduct of public affairs and a growing fusion of sectional interests with the interests of the whole. If one atempts to conjure up the picture of India under the new regime, one can see in the legislatures nothing but a tangle of conflicting interests in which the representatives of the masses would find themselves lost as in a labyrinth.

* * *

We have, it will be seen, adopted two distinct standpoints in our criticism of this constitution. One is the question of the repository of ultimate authority ; and the other is the provision for the settlement of conflicts. It must be said, in fairness to the Committee and its forerunners in the formulation of this constitution, that in their eyes the two are related and are interdependent. British politicians justly contend that in the face of such conflicts as there are in India they cannot, without grave risk, make the electorate in India the sovereign power within the country. The whole defence of the construction now recommended centres on the unfortunate dissensions amongst Indians. As conditions are, the Britishers can promise, without fear

of having to redeem it, that, if there is a semblance of a united demand for another constitution, they would gladly grant it to this country. The reality of the dissensions and their significance to the task of constitution making may be readily conceded. But it does not follow that the dissensions necessitate such a constitution. For the present provisions would, assuredly, have the effect of perpetuating them and render impossible for a long time to come the fusion of sectional interests with the commonweal.

* * *

It is significant that the reactionary course of the "reforms" has kept pace with the intransigence of the minorities. In fact, the two have gone hand in hand. In 1930 when the progress of the nationalist movement was spectacular, the Government not only made a definite promise of Dominion Status, but took the unprecedented step of concluding a Pact with the Congress leader. At that time it seemed that the political problem was nearing a satisfactory settlement. But since then the forces of reaction have gained and gathered strength in both Britain and India. The Round Table Conference was, as the event showed, convened with a view to display and accentuate the sectional differences. The Congress leaders were isolated in the Conference and on their return to India incarcerated. It is not unfair to suggest that the sectional differences were exaggerated with a view to make the Constitution more and more retrograde. British diplomacy has been hard at work all these days since the conclusion of the Irwin-Gandhi Pact, and has been helped by Mr. Churchill railing at the National Government and the minorities in India growing more and more intransigent.

* * *

It is difficult for any Indian to view the Report as other than British opportunism at its worst. And the marvellous penmanship of the authors of this report cannot serve to hide this fact. They draw freely on the tenets of modern politics to deny the claim of India to free political institutions. They quote Bryce to bring out the shortcomings of Indian politics. They stress the absence of a "mobile public opinion" which is the condition of responsible government. They make much of the evolutionary character of political institutions and the inimitable nature of the British Constitution. But we wonder what they have to say in defence of measures which, far from tending to remove these defects would, assuredly harden and perpetuate them. It would be insulting the intelligence of the Committee to suggest that they believe in the possibility of creating a "mobile public opinion" by giving a political sanction to religious segregation and dangling before these groups the sweets of political power. The cleavages in the body politic have been at once increased and widened ; and the effects of these measures are so obvious that the solicitude, which the Joint Committee profess for a healthy political life in India, seems to lack the ring of sincerity.

It may be asked what the Committee could have done in the face of so perplexing a situation as obtains at present in India. We shall discount the familiar Nationalist charge that the Government have actually encouraged the dissensions in order that they might more easily and with greater show of reason deny India a free constitution. In any situation, it should be possible for the Committee to desist from offering prizes for sectionalism. It is even understandable that the whole attempt to devise a constitution is premature and that time is given for the discordant elements to compose their differences. The dismemberment of provinces has been decided on with inconceivable levity. Orissa is admittedly a deficit province. Sind is a patent attempt to increase the number of provinces where the Hindus are in a minority and subject to the Muslim majority. Burma has been torn asunder from a country, with which she had immemorial cultural ties and with which she had developed during the one century and a half close commercial bonds. The anxiety to create new political boundaries almost reminds one of the Treaty of Versailles.

* * *

In fact, the White Paper and the Report of the Joint Parliamentary Committee are the natural result of the complete defeat of the Congress. It is true that the authors of the latter have masked their feelings of exultation over the defeat of the Congress. But no one will doubt that if the Congress had not been checkmated as it was by a massing of the forces of the minorities, the constitution would have been far more liberal than it is. Even those who have thought it necessary in the interests of law and order to curb the illegal activities of the Congress must now recognise that the present impasse is the natural and easily predictable result of not according support to the standpoint of the Congress in the matter of the new constitution.

* * *

For impasse, it, undoubtedly is. For while on the one hand it is hopeless to attempt a revision of the constitution at this stage, its actual working is fraught with grave dangers to the future of Indian nationalism. Both in the provinces and at the centre, forces of reactionarism will find themselves strongly entrenched ; and the constitution offers no means of dislodging them from the positions which they will occupy. To take only the major provinces, Bengal will have a complete change of masters in matters which concern the average man more intimately. The consequences of enthroning in power a Muslim majority and placing a proud and consciously intelligent class of nationalist Hindus in a position of secondary importance are not easy to foresee. Bombay and Madras are to have a Second Chamber which will bring out in sharp conflict the interests of the masses and those who like to regard themselves as constituting an aristocracy. If the constitution is to be a success from the standpoint of the

country as a whole, it should be possible for the nationalists to persuade the sectional interests to surrender their special privileges. But what chance is there that the nationalists will be able to do so? On the other hand, the dissentients will find increasing confidence in their ability to hold what they have gained and even to further these gains. The fissiparous tendencies will be increased a hundredfold.

* * *

In these circumstances, one wonders what the developments in the near future would be. There can, indeed, be no use in demonstrations or any manner of agitations. Representations from leaders would be equally unavailing. The Congress has only just returned to the councils pledged to fight the White Paper. How exactly it would fight the White Paper is not known to anyone. Even the Congress leaders are probably in the dark about it.

* * *

In these circumstances one can only hope that on the one hand, there will be a greater recognition of the requirements of the commonweal on the part of the minorities and other sectional interests and on the other, the dawn of a spirit of helpfulness to India in the party in power in Britain.

RESULTS OF OTTAWA

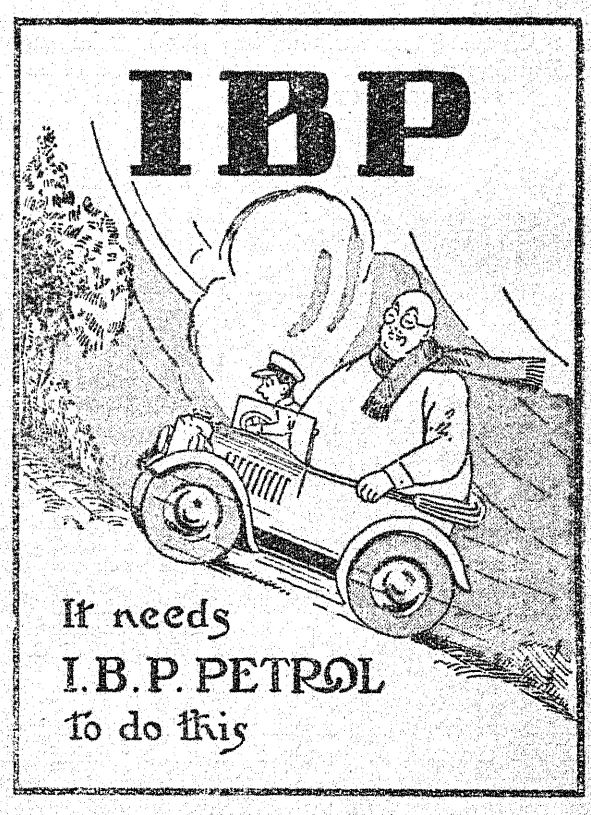
The Federation of India Chambers of Commerce have submitted a timely protest against the increasing tendency of our fiscal policy to degenerate into a number of bargains with foreign countries, with a pronounced bias in favour of trade with Britain and the Empire. Normally, the visit of the Italian Trade Delegation to India should invest our trade relations with that country with a more topical importance. But as there is no fear that in our bargains with Italy Indian interests would be allowed seriously to go by the board, the apprehensions of the country as a whole are centred rather on the demand which Lancashire has made for the redemption of the Government of India's promise in regard to the import of her cotton goods into this country, Lancashire has specially favoured the idea of a trade pact between this country and Britain. It is obvious that the question of a trade pact with Britain can be viewed both as part of the scheme of Imperial trade and as a purely bilateral pact between this country and Britain. We have in previous issues of *Indian Finance* examined the economic assumptions behind the present vogue of bilateral trade pacts. And we gave it out as our considered view that the spread of this vogue is inimical to the international relations, that the tendency of the bargaining countries to balance their exports and imports would ultimately have the effect of abolishing all triangular trade, that the concessions exchanged between two countries have the inevitable effect of complicating the relations of each with others and that, the sooner the world desists from this course, the better for it. The closer ties between Britain and India do not make the question of a trade pact between the two countries essentially different from a similar understanding between any other two countries. No one will deny that, where natural ties exist between two countries, the commercial bonds inevitably get closer and that the growth of mutually advantageous business does not need artificial aids from the Governments concerned. It seems strange that Britain of all countries could retain faith in the possibility of pulling herself to the prosperity of olden days by concluding a series of pacts with the various nations of the world. She has, as is well-known, a large entrepot trade, which must be cut into by every bilateral pact which she concludes and encourages. As for India, her foreign trade, whether exports or imports, is spread over such a number of countries that it would be impossible to gauge accurately the probable effects of any artificial diversion of such flow of goods. We may, therefore say, that considered as a purely bilateral pact, the trade pact with Britain cannot have much more to recommend itself than any other proposal of that kind.

* * *

It would still remain to consider this proposal as part of the scheme of Empire trade. It will be remembered that Lancashire has put forward her claim mainly on the ground that at the time of the conclusion of the Ottawa Pact a definite promise had been made that the claims of the cotton industry to a place in the Indian market will be considered at a later stage. Given the Ottawa Pact, the Government of India are substantially right in saying that the claims of such a large British export industry to a place in the Ottawa Pact are worthy of the most serious consideration. But before India proceeds to consider the suggestions of Lancashire, it would be necessary to examine Britain's own experiences of the Ottawa Pact.

* * *

On this question the *Empire Trade Supplement* of the *Economist* published along with its issue of November 3, has, indeed, a great deal of light to throw. The *Supplement* has been prepared by no other than Sir George Schuster, an eloquent advocate of the Ottawa Pact at the time India ratified it. Sir George was himself one of the representatives of this country at the Ottawa Conference and was in a large measure responsible for its passage through the Indian Legislature. It is quite possible that in drawing up this *Supplement* for the *Economist* Sir George bore in mind the role which he played in India as the apologist of the economic blunders of Ottawa. In the nature of things, it is not to be expected, therefore, that Sir George will come out with any scathing condemnation of the Ottawa Pact. But to his credit it must be said



THE INDO-BURMA PETROLEUM

that he has amassed statistics relating to the trade of the various Empire countries and has examined them with unquestionable objectivity. The conclusions, which this examination leads to, are of the greatest importance not only to Britain and the Empire but to world trade as a whole. For the statistics serve to dispel some of the most unctuous superstitions that have gained ground in the economic politics of the nations.

* * *

Before we try to assess the findings of Sir George Schuster, it is necessary to summarise the main conclusions of the statistical survey. The first point that emerges is that the inter-imperial trade both of the United Kingdom and of the countries of the Empire was in 1933 a larger proportion of their total than in 1931 ; and that in most cases, though not in all, this intra-imperial trade had increased in total value. The increase in the intra-imperial trade cannot, obviously, be attributed wholly to the effects of the Ottawa Pact. For it should not be forgotten that the Empire countries have had in the link with sterling a facility for trading amongst themselves which no other group of nations has had. And what is more, the Empire countries have not resorted to those cruder forms of restrictions on foreign trade which are increasingly beloved of the Continental nations. But after all allowance is made for these, there still remains much in the increase of inter-imperial trade, which must be set down to the credit of Ottawa.

* * *

The second important conclusion is that Britain has done better by the Dominions than the Dominions have done by her. This is only to be expected. For, as the *Economist* observes in its comments on the *Supplement,* Britain has been, even through the years of the depression the most stable market. And when she took the course of imposing an alround import tariff and gave free entry to the Dominions, the natural result is an increase in inter-imperial trade. The Dominions were able to profit at the expense of the foreign nations, but found it difficult to effect a corresponding increase in heir offtake of British goods.

* * *

Thirdly, Sir George Schuster's statistical data bring out clearly the growth of the trade of the Dominions with the non-Empire countries. While to-day the Dominions are selling a larger proportion of their exports within the Empire than before the war, the proportion of Dominion purchases within the Empire has not grown to the same extent.

* * *

The *Economist* sums up the conclusions suggested by the facts cited above :

> In the light of these three deductions we may conclude that as a unit Empire trade has been less vulnerable to depression than trade outside, that the chief factor in this stability has been the great British market of consumers, that the Dominions as buyers have contributed less than Great Britain to the recovery that has taken place in the group as a whole, but that the fiscal changes, of which the Dominions have enjoyed the benefit, have been more advantageous to them than those which have been conceded to Great Britain have proved to her.

* * *

If then, the Dominions find it difficult to reciprocate fully the gestures made to them by Britain, it only means that inter-imperial trade is not so complimentary as the advocates of Ottawa would have us believe. Sir George Schuster is quite specific on this point ; and he calls on the Dominions not to yield to the fascination of the idea of self-sufficiency and to show determination to resist the demands of certain interests, which stand to gain by the pursuit of the ideal of self-sufficiency.

* * *

For our purpose what matters is that, the defects of the whole scheme of Ottawa are being unfolded to us. Britain has not gained from the Dominions to the same extent as she has helped the latter. And what is more, the latter are not in a position to fulfil the expectations of Britain in this regard. The Empire cannot function as an economic unit, to the same extent as the world did in the pre-war days and still can, with a slight redistribution of productive activity. If then the Empire cannot function as an economic unit, if the Dominions cannot reciprocate in full the treatment accorded to them by Britain. and Britain is sure to wake up to a recognition of the importance of her trade with foreign countries, what changes are there of the present scheme of Empire trade continuing in the future? We are certain that in Britain the idea of Empire trade has a life strictly limited to that of the National Government. The recent bye-elections leave no room for doubt as to the trend of public opinion. And if a Government is formed composed of the leaders of the present opposition, it is certain that Empire trade will go. It is to be wondered whether it will be to the advantage of Britain or India to cramp the trade of this country with another pact. It should on the other hand, be the duty of both countries alike to help the resumption of free trade with only such modifications as the development of the resources of backward countries demonstrably requires.

COAL TENDERS AND COAL INDUSTRY

The tenders submitted to the Chief Mining Engineer for the supply of coal to the State-managed and Company-managed Railways for the year 1935-36 aggregate to about 34 lakhs tons; and the prices are considerably lower than last year. Deshergarh and Poinatic coal are quoted at Rs. 2-12 and Rs. 3 per ton. This brings out clearly the fact that the leading coal interests have failed in their attempts to arrive at an understanding regarding the rates for tenders. It is unfortunate that faith should still

linger in rate-cutting as a means of securing remunerative business. The coal industry has, for some time, had only two sources of hope. One was the scheme of restriction of output aiming at the maintenance of a stipulated level of prices, and the other is the maintenance of an agreement amongst the leading coal interesst about the rates to be submitted in the tenders for the railways. Undoubtedly, the preference of the industry should be, and is, for the former. It is a familiar story that the larger part of the Indian coal industry succeeded in formulating a scheme of restriction and submitted the scheme of restriction and submitted the scheme for the approval and legislative sanction of the Government of India, and that the scheme fell through because of the opposition of certain other interests on the grounds which are not wholly pertinent to the issues involved. The question of the restriction of coal output has since been dragging on for a long time, and it is in consideration of the doubtful chances of getting the scheme approved and enforced by the Government, that the industry set about the conclusion of an agreement in regard to the rates for tenders. In those moments in which the chances of restriction seemed remote, the market preferred to pin its hopes to the conclusion of the agreement regarding rates. Now that the price of the recent railway tenders show the utter absence of any sort of understanding, restriction would seem to be the sole hope of the industry. There is something particularly callous in the unconscionable delay which the Central Government are causing in the final settlement of the question of restriction.

ST. ANDREW'S DAY

BY POTHAN JOSEPH

St. Andrew's Day has been scorned by those South of the Tweed; as an occasion of pretentious exuberance but Scotchmen have held their own against the ridicule of foreigners. "When I went to London, I met only the heads of departments" said an Aberdonian visitor to justify the fact he met only Scotchmen. He was right. As for India, the story is that the country was won in the name of Englishmen by the courage of Irishmen for the benefit of Scotchmen. The Scotchmen form only three millions out of the fifty millions in Great Britain, most of them fools according to the judgment of that dour Scot, Thomas Carlyle. On St. Andrews' day they talk of Robert Burns and Bannockburn, in contempt of the English. The control of the jute mills of Calcutta in these piping days of peace, shows that Scotland has not boasted in vain.

The man of Aberdeen is supposed to be a miser; Dr. Johnson defined oats as something eaten by horses in England and consumed by men in Scotland. But what fine horses and wonderful men they have produced! The Aberdonian is held up as a subject of penurious greed, but the best of Aberdeen's institutions has been built by the contributions of Scottish charity. Andrew Carnegie was proud that he had been a Scotch lad. The fact is they are subjected to a stern, Calvinian discipline; and the virtues of thrift and character surprise their competitors in life.

The Scotchman, like the Jew, is a topic of perennial jest. In the *Punch Library*, there is a whole volume called "Mr. Punch in Scotland". But Scotland has produced divines and scholars and businessmen and adventurers almost beyond the capacity of its limited stock.

On St. Andrews' day with its fill of haggis and whisky, Scotchmen go a little crazy. In India, it has been a day of political pronouncements. Before Delhi became the rightful capital of India, Viceroys used to speak on current questions. When the Congress appeared in 1886, Dufferin did not spare it; Curzon hit hard; Ronaldshay in 1920 attacked the sociological theories of Mahatma Gandhi quoting from his book *Hind Swaraj* in which he had despised doctors and hospitals. The attack was a disturbing revelation; and St. Andrews' Dinner continues to be still a metropolitan occasion for the political impeachment of Indians.

The Scot has the genius of conservatism *plus* the instinct of subtle aggressiveness. The bulk of jute shares belongs to Indians, but the Scot owns all. In political argument, he takes a dry interest, but at the head of affairs they have still a Scotchman, Ramsay Macdonald.

In physical courage there is nothing to surpass the courage of the Highlander. His resolve is final and the real story of army heroism does not show him to be a shirker or vulturous exploiter. The exploit of Leonidas was great; the courage of the Rani of Jhansi, with her son flung on her back plunging into the fray, is an epic picture of heroism which Sir Hugh Rose has acknowledged on her Gwalior monument; the spirit of dedication displayed by the Akalis at Jaits against assaults daunted the assailants; but there is nothing to surpass, in the way of disinterested sacrifice, the glory achieved by the Crew of the *Birkenhead* when two hundred Scottish sailors smilingly stood up to their fate under the command of Captain Sefton who, sword in hand, ordered that the women and children should be saved, and they themselves perish. They perished, Scotchmen all.

OMAR KHAYYAM ON J. P. C. REPORT

BY G. L. M.

Poets, as those claiming to be poets never fail to emphasise, are prophets. It is not perhaps realised that even the Rubaiyat of Omar Khayyam contains significant comments on the recent report of the Joint (Select) Committee (of Parliament) on what are euphimistically but conventionally called Indian *Constitutional Reforms*. When the press is now overflooded with criticisms, interviews, statements and articles on the Report, a recapitulation of Omar (with slight alterations wherever necessary) will be pertinent: even if to some it seems, in Omar's own words, "the Memory of this Impertinence!"

* * *

Speaking of the 22nd November when the stone of a Report was to be given and the star of Liberty to fade, Omar truly said:

"Awake! for Morning in the Bowl of Night .....
"Has flung the Stone that puts the Star to Flight
"And Lo! the Exploiter of the East has caught
"A Nation's Destiny in a Noose that's Tight.

Of the disillusioned, disappointed and embittered Round Tablers whose hearts had grown sick by hopes deferred and responsible government receding, he sang:

"The stately Hope they set their Hearts upon
"Turns Ashes—or it prospers, and anon
"Like snow upon the Desert's dusty Face
"Lighting a little Hour or two—is gone!

And further,

"Myself when Delegate did eagerly frequent
"Conference and Committee, and heard great Argument

"About it and about, but evermore
"Came out by the same Door as in I went.

The *hope-less* (in more senses than one) Moderate cries pitiously:

"There was a Door to which I found no Key
"There was a Veil past which I could not see.

And so Omar comes to his rescue:

"But leave the Wise to wrangle and with me
"The Quarrel of the Constitution let be.

Not forgetting the financial safeguards especially regarding currency, Omar said:

"Ah, take the Cash in hand and waive the Rest!"

Not that Omar did not foresee the results of the Assembly elections:

"And look—a thousand voters with the Day
"Woke—and candidates scattered into Clay
"And this first winter month that brings on cold
"Shall take Chetty and Mudaliyar away!
"But come with old Bhulabhai and leave the Lot
"Of Mudaliyar and Krishnamachariar forgot
"Let Gour lay about him as he will
"Or Ankelesaria lose deposit—heed them not!

Nevertheless, Omar saw the firm and unbending attitude of the average British Commoner and Lord about J. P. C. being the last word in political wisdom and its Report the final framework of the constitutional future of India:

"The Moving Finger writes: and having writ
"Moves on: nor all India's Piety nor Wit
"Shall lure it back to cancel half a Line
"Nor all her tears wash out a Word of it.

Yet Omar foresaw the determination and efforts of the Congress with a rare perspicacity:

"Oh Brother! could thou and I non-violently conspire
"To grasp this sorry Scheme of Reforms entire
"Would not we shatter it to bits and then
"Re-mould it nearer to our Hearts' Desire!

Grosvenor House,
London.

For those in London, who have followed *Indian Finance* during the last three years, I must appear in the light of a proved prophet ; and I find they are neither few nor small. It is peculiarly good fortune that my forecasts about giltedge, which I have persisted in the face of odds, materialised during my sojourn here. All these days, men in high places to whom my views on giltedge and giltedge prospects were familiar, had practically no other topic of discussion. And it is understandable, not only because of the big stakes which the City has in India, but also because London had started a boom in giltedge and stocks almost since I arrived here. It is to me a flattering thought that in this matter I stand in the company of Mr. J. M. Keynes. I am aware of the vast ocean that divides me from the eminent economist. But it is true—and the pages of *Indian Finance* will bear it out—that, while Mr. Keynes, working in larger spheres and taking a far more comprehensive view of world trade and finance, arrived at the conclusion that the future trend of international money rates must be downward, I, working in the smaller sphere of the Indian giltedge market, was able to arrive at a similar conclusion and entertain a similar conviction. The prophecy is now in the process of realisation ; and I naturally recall that last May I was asked by one in high authority what was my view of the future of 3½ per cent. Rupee Paper. I said "In my own view it is 95 before year-end, but I do not see how 92 can fail to be reached before the end of the present slack season." The slack season is over ; and the price of 92 has been left fairly far behind. And the gradient of giltedge is so steep, that I am sure that 95 will not wait for the end of the year, even to prove my prophecy true.

The obvious requisite of strong giltedge is the sound financial position of the Government concerned. No lender can be indifferent to the continued improvidence of his borrower ; and the fact that the resources of the whole people are behind the debts of a Government cannot make much difference. The slump in giltedge during the time of the great depression can be explained not a little by the fact that the depression served to upset each national budget and induce nervousness in each investor. The restoration of balanced budgets is, thus, both logically and historically, the first step in the recovery of giltedge. The heroic efforts of the British Government gave giltedge its first push out of the slough. Then came the abandonment of the gold standard, the easy money policy of the British authorities and the chain of events that led up to the historic conversion of the War Loan to a 3½ per cent. basis. Other countries followed suit, some of them on the gold standard, others off it. Generally speaking, the abandonment of the gold standard has had a large place in the recovery of giltedge, for it released the stranglehold of exchange on money and enabled governments to follow a cheap money policy. The relation between Government credit and budgetary equilibrium was, in fact, of the nature of a vicious circle. To most countries reduction of interest on the national debt was necessary for balancing the budget ; and the national credit would not rise unless the budget was balanced. The abandonment of the gold standard helped to break this vicious circle. As I said, the conversion of the War Loan is a milestone on the onward march of giltedge. The progressive reduction in interest charges has helped the national budget to appear in a better light, though, of course, other factors are also present.

Thus the two basic factors of the giltedge market, namely, Government credit and state of money have been extremely propitious. The Government finances here have been showing a phenomenal improvement, so that the talk of reduction of income tax in the next budget is again heard. The significance of such reduction to the price of giltedge securities is obvious. A highly developed market cannot miss the significance of even this talk as an indication of the financial position of the Government.

It is the peculiar feature of the present position that, just when the national finances seem at their best, the easy money conditions are also accentuated to a degree never known before in the history of the City. Much of this will have become familiar to the readers of *Indian Finance* by the time these lines appear in print. But I shall recapitulate them here in brief. For a long time there was no mistaking the trend of money and interest rates. But the clearing banks had endeavoured to preserve some stability by concluding a Gentleman's agreement about minimum rates for bills. It speaks volumes for the loyalty of British banks that this agreement exerted its binding effect for nearly a year. But all the forces were arrayed against it. On the one hand, the bills were shrinking in volume. On the other, money was becoming more and more plentiful. Finally, the pressure was irrisistible. The frail dam of the Gentleman's Agreement burst. Treasury Bills discounts dropped to very near record "lows". The clearing banks reduced the loan rate on eligible bills from 1 per cent. to ½ per cent. And the plenitude of funds was, so to say, advertised in the most effective manner imaginable. It is no wonder that a reduction of the Bank of England rate to the unprecedently low level of 1½ per cent. is believed to be in prospect. There can be no doubt that, if it comes about, it will be quite in consonance with the prevalent money conditions and the present outlook. For not only is money early now, but London has seen but the beginning of the influx of foreign funds.

The position of Government finances and the position of the money market have thus been dealt with. I may now turn to what may be called the new capital market. I have already referred to the conversions

effected by foreign governments following the lead of the British. This helped international money rates to find their level. In Britain, there is one factor, the insularity of which has been helpful to the credit of the British and, I might add, the Indian Governments. I refer to the hold which the British Chancellor of the Exchequer has kept on the floatation of new issues in the London market. It is a factor of no small importance to the outlook of giltedge that the embargo on foreign capital issues still continues ; and every time a Dominion or other loan is issued, it only serves to put greater emphasis on the embargo, as the Chancellor of the Exchequer insists that his ban on foreign issues is not withdrawn. A more technical factor is the paucity of scrips in the market. There is very little of floating scrips, so that every buying demand has its full force on prices.

Considering the precipitate fall in money rates and the spectacular manner in which it took place, it is no matter for surprise that giltedge prices have shot up in the way they have done. But in appraising the future of giltedge, it is necessary to examine the relation between the revival of trade and the level of giltedge prices. It is often thought, and not without reason, that giltedge prices must suffer a setback as soon as the state of trade shows signs of a reliable improvement. In this context the difference between the revival of 1932 and revival in the future is of great importance. Revivalist sentiment in those days was none too strong ; and it may well be that revival in the future might be quite different in form and in substance. For, while in 1932 the revival was due largely to the assertion of cyclical forces and was to that extent a revival true to type, in the future, most of the business revivals would be in the main the result of planned economic policies, on which the various governments of the world are now working. To that extent, revival in the future would prove to be less unreliable than the revival of 1932. It is, therefore, necessary to examine the repercussions of such a revival if and when it comes about on the state of giltedge prices. It is generally accepted by economists that, as conditions are, it is more than improbable that for some years to come trade demand will grow to the point of employing all the surplus funds in centres like London. While I do not question the correctness of this view, I would also like to suggest that the technique of central banking has so developed in these years that the conflict between giltedge prices and revival of trade has been greatly minimised. It should be possible in the future for the monetary and credit authorities in each country to finance the requirements of growing trade in a manner that the prices of giltedge will not be effected. In fact, I do believe that such a technique has been evolved already ; for, on no other hypothesis can we explain fully the phenomenon of the concurrence of a boom in both giltedge and in ordinary shares. I have traversed over such wide ground that I think it would be useful to recapitulate my points and add a few more :—

1. British Government's financial and budgetary position is improving week by week ; and this must be reflected in enhanced credit.
2. Political and economic developments in France, Central Europe and even America make London a kind of "cloakroom" for money seeking refuge for safety.
3. Industry in Britain has made enough progress to justify a measure of confidence in Britain's economy, but not enough to divert funds from giltedge into industrial stocks.
4. Even if expanding trade should need larger money, the reserves are so ample that it will be not for a good long time that they will be exhausted. Moreover, central banking technique has so advanced even within these five years, that financial needs of industry can be met by a more elastic utilisation of the instruments, which that very expansion creates, when central banking was less sure and less mobile, strength of giltedge meant sluggish trade and *vice versa*. It is no longer so. You can have, as is seen to-day in England—and, to some extent, in India—a concurrence of boom in giltedge and boom in equities.
5. The sharp decline in Treasury Bills rates.
6. The breakdown of the Gentleman's Pact amongst the Big Five to maintain the bill rates.
7. The reduction of the loan rate by the clearing banks on eligible bills from 1 per cent. to ½ per cent.
8. Reduction of rate on foreign deposits.
9. Reduction in total volume of floating debt which is over £200 million less in six months.
10. Scarcity, almost famine of scrip—decrease in floating stocks in market circles.
11. Prospect of reduction in the Bank of England rate.
12. Continuance of embargo on foreign capital issues.
13. Success in an overwhelming measure of bond issues like Central Electricity Board, Australian Loan, Municipalities etc.
14. Hope of income tax reduction in the next budget.

It will be evident that I have not summarised the points in the order in which I dealt with them. But the fourteen points I have arrayed above should be sufficient to cow down the forces of pessimism in giltedge.

OLYMPUS

(FROM OUR CORRESPONDENT)

New Delhi, Nov. 20.

Writing on the eve of publication of the Joint Parliamentary Committee Report I am naturally tempted to pass on to my readers all the chatterings and whispers of Dame Rumour in the seat of the Olympians. And if I resist the temptation it is not because I am inexorable, but by the time this appears in print, the report will have been published in full and the whole of India will have made its informed comments thereon.

* * *

Forecast is thus obviated. But I might say this, that the Government will not be surprised if the worst is said about the Report. All that the Government venture to hope for is that no one, and particularly Congressmen, should refuse to work the constitution outlined in the Report. Lord Willingdon's Government are ready to face any tactics that Congress might adopt, barring another boycott of the Legislatures. If Congressmen would only take their place in the Assembly and the Councils, the Government do not care what they do in them.

* * *

It should not be difficult to understand this extreme solicitude for Congress participation in the Councils. In the first place, the report is, perhaps, not calculated to keep the Congress in its present mood of moderation. And if the Congress should suffer a relapse and declare that it will not come within the fold of the constitution, it might mean the end not only of the scheme, but of the National Government itself.

* * *

From what I hear Government will find that even the usual friendly quarter will not give them their support. May be, they will keep mum. But then the silence would be more ominous than vociferous opposition. Would the Muslim politicians of the All-India Muslim Conference creed hesitate to commit themselves either way on the Report!

* * *

The Viceroy will also take the opportunity of talking matters over personally with leading Liberal politicians, whose arrival in Delhi has, perhaps, been planned to coincide with the publication of the J.P.C. Report. Sir Tej Bahadur Sapru and Sir C. P. Ramaswamy Iyer will be here for the Cochin Harbour Conference and Sir Shanmukham Chetty is also arriving on Thursday. Lord Willingdon will take counsel with them and suggest to them the line they might take in giving a lead on this critical occasion.

* * *

Assembly election results, of course, continue to form the all-absorbing topic of discussion. The Imperial authorities had their own bitter expeirence of the impact with Congress forces in that all their official votes and loyal elements and the expenses of thousands of rupees did not bring to their candidate in Delhi, more than a fourth of the votes polled by Mr. Asaf Ali of the Congress Party.

* * *

Perhaps, the greatest shock Lord Willingdon has received is over the Madras results. When Mr. Rajagopalachariar proclaimed at Ranchi and Patna that Madras would return cent. per cent. Congress candidates, every one here laughed at him, bearing in mind the strength of the Justice Party. In fact, it was so much overrated that a number of sitting Members of the Assembly, who had really the very best record of nationalist service in the House, and who were invited by the Congress to join them, refused the Congress invitation and took the Justice ticket.

* * *

Thus men like Mr. Ramakrishna Reddi, Mr. Sitarama Raju and Mr. Thampan, who had such powerful local influence, now find themselves downed by the Justice ticket. As one Congressman here put it, the "Bobbili Bubble Burst" In the present state of politics riches and position have alike been of no avail.

* * *

Added to this enormous Congress success, is the fact, that the Nationalists and Hindu Sabhaites and Sikh Members, are, for all practical purposes, Congressmen and will vote with Congress. Then again half a dozen Muslims of the Unity Board complex will join the Opposition forces, and Mr. Jinnah will surely rally round his banner such men as Mr. Abdul Matin Chaudhury, Dr. Ziauddin, Mr. Azhar Ali and Syed Murtuza.

* * *

And Mr. Jinnah is no friend of Lord Willingdon! If anything, he would be only too ready to assert his own importance and demand allegiance to his views. I am told that not more than 10 Muslim members may really belong to the Government side, and that even this is doubtful if the J.P.C. report proves very disappointing. All told, therefore, Government are faced with the prospect of an almost unconquerable opposition and will before long have to face the music.

* * *

My calculation is that the Government will in a majority of cases be defeated and that its success in the lobby is very problematical on matters of economic and fiscal policy on which public opinion is more enlightened and watchful to-day than it was when 1/6 was carried through and the Ottawa Pact was enacted.

* * *

However, Lord Willingdon's Government are getting ready for the fight, and, as usual, confidential reports are being obtained regarding each elected Member of the Assembly to see where these Members are vulnerable and what influences, local, provincial or imperial, can be utilized to ensure for Government a majority of supporters in the House.

* * *

It follows that Government will not run the least risk of losing any nominated vote, which means a diligent search for safe men. It is not a search, so much as a scrutiny ; for the aspirants to these doubtful honours are already besieging the authorities ; and the Government have only to examine their claims and credentials. From the Court Circular one can see how these men are having interviews with the Viceroy. Already men like Captain Lal Chand, Rao Bahadur M. C. Rajah, Captain Sher Muhamed have seen the Viceroy and have probably impressed on His Excellency the desirability of renominating them to the Assembly.

* * *

Mr. C. S. Ranga Iyer has also seen the Viceroy ; and rumour has been current here for sometime that he is likely to be nominated to the Assembly as a counter-blast to Congressmen. If this happens, then Mr. R. S. Sarma will not be renominated. He might be given a seat in the Bengal Council, or, as chance arises, promoted to the Council of State.

* * *

Sir James Grigg has returned to Headquarters ; and we should be ready for some announcement regarding a big road programme on the Frontier, in pursuance of the policy of peaceful penetration, in the place of the present method of continuously bribing the tribes into friendliness, which leads nowhere.

MR. DARLING IN MADRAS

Madras, Nov. 20.

In a humdrum view of the week the retirement of Sir George Stanley and the advent of Lord Erskine to the Governorship of Madras must receive pride of place. But, strictly speaking, these changes in high places call for little or no comment. So far as public policy is concerned, they are dictated by the highest authorities and leave little scope for differences of personality and temperament. Nevertheless, it must be said of the retirement of Sir George Stanley that it has caused much regret in many circles and the public in general. For though Sir George's administration is not noted for any policy of large scope and liberal purpose, he has, within the limits allowed to him by the present administration, shown a capacity to stand by principles and generally to endear himself to people who came in contact with him. And at the moment of his retirement it is only fair to recall that the five years, in which he has been at the helm of affairs in this province, have been an exceptionally difficult time, when storms of various kinds have swept over the country and left dire devastation behind. It should be a matter of no small satisfaction to Sir George that, before he leaves the country, he is able to see some signs of improvement in the economic position and in relations between the parties. The recent victory of Congress in the Assembly elections is not a matter for a British satrap to enthuse over ; but, considering the stand that Sir George Stanley made in his time, for the obliteration of invidious distinctious in Government service, it is reasonable to suggest that the weakening of the communal sentiment which the Assembly elections connote is welcome to the retiring Governor.

Of the new Governor, not much is as yet known and it will be sometime, too, before the public will get an inkling of his personality. Not the best of our Governors have been able to break the iron discipline under which they are put by the steel frame of the Services. In fact, the very routine of personal life for new Governors is ordered to a great extent by the staff of the Government House. For some time, the public will remain in ignorance of the personality of the new Governor ; but the first impression the people have gathered is that of a young man with an impressionable mind and eager to break the bondage of old ideas and at the same time determined not to be carried away by the new. It remains to be seen whether Lord Erskine will make a significant departure from the policy of his predecessor in regard to the most crying evil of the time, namely, agricultural distress. The problem of agriculture in the South is really the problem of economic reconstruction as a whole. It will be sometime before the new Governor will be in a position to appreciate the gravity and the magnitude of the problem, but it is certain that, however much the people may be prepared to give him time for acquainting himself, with the conditions of the country, they will not set any other standard of judgment for him than his ability to relieve the masses of cultivators of the dire penury which they are now suffering.

This Presidency has now done with the elections to the Assembly. And *Indian Finance's* remark in the last issue that except in special constitutencies or predominantly communistic areas Congress is bound to win has proved true. For sending the most solid block of Congress votes to the country it would appear that Madras carries the palm. Even members of minority communities like the Indian Christians are found to espouse the Congress cause. A considerable number of Anglo-Indians, too, are known to have cast their votes in favour of Congress and it is particularly significant that in the City elections the non-Congress candidates who failed are highly important and influential political leaders. Mr. Mudalier is an able parliamentarian ; Sir Shanmukham was deemed till recently to be on the threshhold of a vast political career: neither of them has been able to offer even a good fight to Congress. From all these it would appear that the sectional differences which marked the political life of this province are progressively decreasing. But one should not be in a hurry to intrepret the elections to the Assembly as the death-knell of the Justice Party. Its leaders no doubt claim that the power of the Justice Party should not be judged by the results of the elections to the Assembly. There is a great deal of truth in this contention, for most members of the non-Brahmin community in Madras are keen enough to realise that the work of the Assembly is better done by Swarajists than by the avowed supporters of Government. For it is only when the elections are held for the local Council that the real state of feeling within the province will be known. I have my suspicion that so far as the internal politics of the Presidency is concerned, communal sentiment is not less strong to-day than in the heyday of Montagu-Chelmsford reforms.

In the strictly economic sphere there has not been much doing of late and the visit of Mr. C. R. Darling to the South in connection with the Rural Credit Department of the Reserve Bank of India has indeed attracted a great deal of attention. Mr. Darling has toured many important places in the South and has not missed any opportunity of meeting people who have some contribution to make to the question of rural credit. The Madras Chamber of Commerce met Mr. Darling at a Conference and the views of the Chamber were clearly propounded in a memorandum specially drafted for the benefit of Mr. Darling. The main idea of the Madras Chamber is that whatever help the Reserve Bank can render rural credit must come in as part of the scheme of unifying the monetary and credit system of the country. After all, the Madras Chamber argues, the function of a Reserve Bank is not to afford rural credit but to unify the monetary machinery in order that such changes of policy as the Bank decides on, may be rendered effective. The Bank cannot legitimately undertake any business which is at variance with this purpose. The Madras Chamber therefore suggests that the principal aim of the Reserve Bank must be to unify the banking system and that in this view the Bank ought to try to rationalise the indigenous banks and get them to comply with certain standards. Once they do so, they should be eligible to be included among the scheduled banks. Mr. Darling also collected the experiences of the Land Mortgage Banks during the small period they have been working. On this point his visit to Trichinopoly has apparently been very useful for the man connected with the Land Mortgage Banks in that centres has been able to throw much light on the matters on which Mr. Darling wanted information. Mr. Darling was particularly anxious to know how the peasants reacted to the increase in their income during the comparatively prosperous years. The authorities of the Land Mortgage Banks are certain that on these occasions the peasants invariably try to increase their standard of living. What conclusions Mr. Darling will draw from this is not known ; but he should have made special note of the opinion of the Land Mortgage Banks that if the term of repayment of loan was extended from twenty to thirty years, the agricultural classes would not experience much difficulty in returning the loans they take from the banks.

Attempts have been made during the week by the Governments of Madras, Cochin and Travancore to move out of the deadlock on the question of the fourth stage of the Cochin Harbour. A meeting of the various representatives was held during the week under review in the chambers of the Madras Cabinet. Nothing seems yet to have transpired, but it is believed that the representatives did much useful exploration of the ground preliminary to the Conference at Delhi on or about the 27th of this month.

(FROM OUR CORRESPONDENT)

Thursday, Nov. 22.

Bombay has emerged unscathed from the election —and the inevitable reaction has set in. That is the tragedy of Bombay. There is a palpable sense of weariness and *ennui* after each animated event--whether it is a sanguinary textile strike or a fierce rush for the polling booths. There were no outstanding upsets as in Madras ; but the number of voters who polled was certainly an indication that there is a growing sense of citizenship in Bombay. By 3 p.m. on the first day 25,000 voters had polled ; and this in spite of the fact that the polling arrangements were by no means adequate. There were only four polling stations for about 45,000 voters and only about four or five officials to issue voting papers. It is, perhaps, a gratifying sign that Indians are learning to undergo a great deal of trouble and inconvenience for the sake of exercising their franchise.

The path of primary education in Bombay, like many other well-known paths, seldom runs smooth. The City Fathers are eager to inaugurate a scheme of primary education for all. But the precariously adjusted budget will not bear the least extra strain. It was, therefore, proposed at a meeting of the Bombay Corporation that the grant from the Government for primary education, a very inadequate grant, should be eked out by an educational cess in Bombay City. It was not to be an additional taxation, as it was also proposed that the general tax for the year in which the cess is levied for the first time, should be proportionately reduced. The resolution, as it was framed, had an innocuous look—it was merely a reform in the method of accounting. Nevertheless, it came in for a great deal of opposition. Some members saw in the proposal the thin end of the wedge, as there was no guarantee that the proportionate reduction in the general tax would be maintained. The proposal was eventually referred to the Schools Committee.

Karachi is experiencing a great deal of trouble in realising her trade debts from Germany. Out of a total of £2,500,000 due to India, Karachi is said to have a claim for £250,000. The recent exchange restrictions imposed by Germany on the import trade have made it exceedingly difficult for foreign importers to obtain payment from Germany. Preference is given to goods of primary importance, either for home consumption or the manufacturing trade. And there is generally an insistence that the exporter should be paid in commodities.

This state of affairs is said to be due to the alarm caused in Germany by the rapidly dwindling export surplus which Germany possessed till lately. During the first quarter of 1934 there was an import surplus of 54 million marks. In view of her large international commitments, which must needs be paid in surplus exports, Germany was compelled to adopt fanciful methods of increasing her export trade. It is rather regrettable because India has an extensive export trade with Germany mostly in raw materials such as jute, cotton, oilseeds, hides and skins, rice, tea, coffee and manganese. When Germany can parry off her more militant creditors, what are the chances of poor Karachi? Bombay, however, is better off. Bombay merchants have taken the precaution of booking their exports in the principal commodities through commission houses in London and receiving payment through the latter. The recent exchange agreement between Germany and the United Kingdom is said to have minimised the trouble of these commission houses in obtaining payment from Germany. It must be dangerous ethics to stop paying for goods purchased in order to strike a favourable balance of trade.

The projected trade treaty between India and the United Kingdom is seriously exercising the attention of the commercial community. Despite the loud protestations made by Great Britain that such bilateral trade treaties are in the interests of India the general tenor of the cry is "save us from our friends". The letter addressed by Mr. D. G. Mulherkar, the Secretary of the Federation of Indian Chambers of Commerce and Industry, to the Government of India expresses the country's distrust of all such trade agreements.

After the known results of Ottawa it is only natural that attempts to foist another Ottawa on India should be stoutly opposed.

> The working of the agreement for nearly two years has shown that this expectation cannot be realised and that there is no doubt that the improvement in or the maintenance of the trade between the United Kingdom and India has been at the expense of trade with other countries. This diversion of India's trade is looked upon with grave apprehensions in certain countries, which are naturally contemplating measures to safeguard their interests. In one such case, namely, that of Japan, India has been forced to enter into an agreement mainly in the interests of her export trade in raw cotton. The Italian Government are sending out a Trade Delegation to explore the ways and means for an agreement with India to overcome the difficulties which Italy is faced without of the circumstances mentioned above. It is not unlikely that other Governments will follow suit.
>
> While these developments are gathering force, the Committee of the Federation have learnt that arrangements for a trade treaty between India and the United Kingdom are almost complete, but the committee are completely in the dark about the purposes or nature of such a new treaty, while the Ottawa Pact is still in operation.
>
> Without entering into the merits of any individual case, the committee are strongly of the opinion that such agreements should be based on a well-defined policy calculated to advance India's interests and acceptable to Indian commercial opinion. Any departure from this or any attempt to force trade agreements with the United Kingdom or with other countries without taking into complete confidence Indian commercial opinion will be fraught with the gravest consequences to the country.

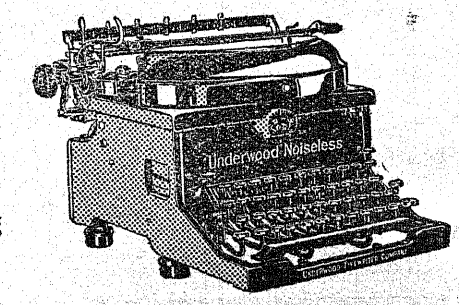
A Health Congress has been staged for Bombay and will commence from next month. Nearly 400 health officials from all over India will meet to discuss sanitary problems affecting the whole of India and to devise measures for combating diseases which take a heavy toll in the country. The need for a careful survey of India's sanitary problems is great ; and it is hoped that the Conference in Bombay next month will succeed in achieving some results. To rouse the interest of Indians in matters sanitary would in itself be no mean achievement.

Sir Samuel Hoare paid the Bombay Municipality a compliment when, in reply to an enquiry about the nature of the British manufactures boycotted by the Bombay Corporation, he said that considerations of price and quality have been and are the decisive factors with the Bombay Municipality in its contracts. And yet Bombay is to have a second chamber in the future constitution !

That brings me to the raging topic of this morning—the Joint Committee's Report. When the mountain of British statesmanship was in labour, the country had no delusions about the possible outcome. But no one thought that the resulting mouse would stink in the nostrils, more than the one delivered a few years ago by the Simon Commission. Almost every section of public opinion here is loud in its condemnation of the Report which is considered much more retrograde than the White Paper. The proposal that the Governor-General will have special powers of preventing measures, legislative or administrative, which would subject British goods imported into India from the United Kingdom to discriminatory treatment, is the very negation of the grant both of responsibility and of government. The separation of Burma and such elaborate safeguards for British commercial interests in India have but one implication—that Great Britain has no desire to loosen the control she now has over India. The Report could not have been more reactionary if framed by Mr. Churchill himself. And yet the language is as gushingly generous as ever.

Don't strain to hear every word above the noise of your Secretary's Typewriter.

Quiet typing HELPS CLEAR THINKING



The new Underwood Noiseless is durable and reliable. It is manufactured complete in the World's largest typewriter factory, and carefully adjusted and inspected by Underwood Craftsmen. It will give long and efficient service and create that pride of possession which always comes from owning the best.

With the Underwood Noiseless it is possible for you to conduct your business in an atmosphere of quiet refinement. The typewriter noise is eliminated. It cannot disturb conversation or concentration.

OVERSEAS' NEWS: By Air Mail

GREAT BRITAIN

DEPRESSED AREAS

If India has her depressed classes Great Britain has her depressed areas ; and it is only in the fitness of things that the "harijan" movement should synchronize with the effort to relieve the areas that are hardest hit by the depression in England. It will be remembered that a few months ago four Commissioners were appointed to examine the depressed areas in England, Scotland and Wales and make recommendations for relief. In a spirit of laudable patriotism these gentlemen waived their claims to any remuneration for their arduous task. The result of their labour of love has just been published, and the fact that they have failed to discover any startlingly efficacious remedy goes to prove how deep-seated and acute the trouble is.

The Commissioners have rightly diagnosed the trouble as due to the swelling of the ranks of unemployed labour, and not, as is commonly believed, to any phenomenal decay of any flourishing industries. Many industries have, no doubt, fallen from the glorious heights they had once reached ; and the policy of 'economic nationalism' followed by the Government and the wall of tariffs and quotas, with which England guards her faith in Britain's economic independence, increases the possibility of a further all-round decline. Not until the currents of international trade are set free will prosperity return to the land. At the present moment the increasing complexity of the international situation only ensures that the Arsenals will continue to work at full pressure.

The revival of existing industries, therefore, can hardly solve the problem of surplus labour in the depressed areas. New industries must be started and new industrial centres established to absorb the surplus labour at the old centres. It may be necessary to take exceptional steps to relieve the acuteness of the situation and in an emergency,—steps like the removal of Woolwich Arsenal to Cardiff, the establishment of an I. C. I. hydrogenation plant in the Durham coalfields and the granting of special favours to the Tyne shipyards. But the Commissioners rightly argue that these are palliative measures and labour must finally be transferred from the depressed areas to new centres of activity.

The only constructive proposal made by the Commissioners is the formation of a development company, either on a local or a national basis, "to assist in financing new business." It is not exactly on the lines of credit for Industries Ltd. because that deals only with businesses which are already established. It is to provide the incentive and the wherewithal for starting new industries in the areas which have an excessive surplus labour. "It is understood that something on the lines of this proposal will be adopted by the Government, and the development company will acquire funds by a public issue, with at least a partial Government guarantee of interest payments."

The proposal without being startling in its novelty has certainly very wholesome possibilities ; and it would be interesting to watch if four unpaid Britishers succeed in solving the problem of Britain's economic distress where successive salaried Cabinet ministers have failed.

Increasing Unemployment.

In fact, the authorities have failed to convince the country that they have successfully set the wheels of recovery revolving in Great Britain ; and the voters, the 'national' candidates may be sure, will ask them awkward questions about unemployment at the time of the next election. In spite of repeated claims made from the Government benches regarding the achievements of the National Government, the authorities have failed to bring the unemployment figure below the two million mark ; and if one failed to see signs of recovery in a country that contains over two million unemployed, one would hardly run the risk of being considered an obdurate pessimist. Not only is unemployment not definitely on the decline, but there is a positive tendency for it to increase from month to month. Official complacency, no doubt, discovers innocuous explanations for each statement issued by the Ministry of Labour. But it is becoming increasingly obvious that seasonal causes can hardly account for this persistent swelling of the ranks of the unemployed.

The statement of the Ministry of Labour shows that during October there was an increase of 37,648 in the number of persons unemployed. The number of employed also decreased by about the same figure.

There was a seasonal decline in employment between September 24 and October 22 in building and public works contracting, brick and tile manufacture, the transport and distributive trades, and hotel and boarding house service. There was also an increase in the numbers of persons temporarily stopped in the coal-mining industry, principally in South Wales and South Yorkshire.

On the other hand, the cotton, woollen and worsted, hosiery, boot and shoe, and iron and steel industries show a further improvement, and employment also increased in tailoring, motor vehicle building and general engineering.

On October 22 the numbers of unemployed persons on the registers of Employment Exchanges in Great Britain were 1,695,897 wholly unemployed, 338,199 temporarily stopped, and 85,539 normally in casual employment, making a total of 2,119,635. This was 179,118 less than a year before. The total on October 22, 1934, comprised 1,700,784 men (against 1,658,481 in September), 63,495 boys (against 65,339), 304,897 women (306,721) and 50,459 girls (51,446).

The increase in unemployment in the coal-mining industry (over 22,000) was no doubt, largely due to the threat of a strike which hung over the South Wales coalfields during the latter part of September and which led to the cancellation of many October contracts. One can also understand the seasonal slump in the hotel business and building trades. But far from such a decided retrogression, the curve for employment usually has an upward tendency in October owing to increased activity in most branches of the manufacturing industries. What explanation have the high priests of tariffs and quotas to offer for this incidental result of damming the currents of international trade?

An Ex-Chancellor's Views.

It is interesting, while writing on the attenuated state of inter-national trade, to note what an Ex-Chancellor of the Exchequer has to say on the subject of England's protectionist policy. At a luncheon given in his honour by the Cobden Club, Lord Snowden indulged in some straight talking. In Lord Snowden's opinion, there has been no change in the fundamental conditions to justify a reversal from free-trade to protection.

> Mr. Runciman had said recently that the only way to do business with the foreigners was to persuade them that if they do not do what we want we will use weapons that hurt.
>
> If that was the temper in which Mr. Runciman spoke to the foreigners, it was no wonder that he had not been more successful than he was, and it was no wonder that after two years of office he had to tell the House of Commons that Customs duties were increasing and other impositions on freedom of trade were being imposed.
>
> In the first years of complete protection we had lost £50,000,000 worth of British exports compared with the low figure of the last year of free trade, and if they included re-exports we had lost £70,000,000.

Particularly pointed were His Lordship's references to the pet of the National Government—*Ottawa*.

> The Ottawa Agreement proved one of the greatest impostures ever inflicted on a gullible public. Huckstering methods between component parts of the Empire were bound to lead to ill-will and ultimately to the disruption of the Empire.

Such frank expressions of opinion are very desirable when the supreme council of the Empire is so obviously bankrupt of good counsel.

Air Mail Week

The Rubber Agreement.

The export quota for the first three months of 1935 has been decided by the International Rubber Committee at 75 per cent. of the standard allowances of the countries signatory to the International Rubber Agreement.

Discussions have been going on for some days ; and while the British members of the Committee favoured a quota of 65 or 70 per cent., the Dutch refused to allow it to go below 75 per cent. They argued that it was not possible to restrict native shipments to the quota allocated and a low percentage would, therefore, mean a very heavy cut on estate shipments to keep the total exports of the D. E. I. within the quota limit. Dutch adamancy must be of a very high order to be able to outlast the notorious British variety.

As a result of the decision, raw rubber has spurted and spot at one stage touched 6 11/16d. Several shares also have registered gains. Although the agreed quota is higher than the market demanded, it is felt that it would be possible to establish a 6½/7d. a pound level of price on the basis of a 75 per cent. quota. Such a level should yield producers reasonable profits without arousing the antagonism of consumers.

U. S. A.

THE GENERAL ELECTIONS

Both in the eyes of the American public and the world at large the general elections blot out every other topic. Foreigners, who have been treated to varied accounts of the progress of the New Deal and the attitude of the American public thereto, could not have felt that the result of the elections was a foregone conclusion. While on the one hand, it was clear that go-ahead America had little patience with the policy of waiting for national recovery, on the other hand, the obstacles which the Recovery Campaign encountered and the manner in which it affected the various interests in the national economy made it doubtful whether there was any considerable unanimity of support for Mr. Roosevelt. Foreigners should, therefore, have felt that only the event would show the result of the elections. But in America there was at no time any doubt that an overwhelming majority was in favour of the New Deal and that the attempts, which the Republicans made to pooh-pooh the Recovery Campaign, were actually recoiling on them. It is amazing how Mr. Hoover has dropped altogether out of the picture of popular American politics. He had endeavoured, whenever a chance offered itself, to represent Mr. Roosevelt's experiments as so many direct roadways to economic ruin. And so had many other Republicans. But the public was in no mood to be scared of the results of the New Deal. Only a few of the more discerning Republicans succeeded in feeling the popular pulse aright, and effected the change in attitude and tone necessary to save their chances at the polls. Some of them had even gone to the length of assuring the public that, if they were elected, their party ticket would not deter them from supporting Mr. Roosevelt in his efforts to pull the nation out of the slough of depression and put it on the high road to stable prosperity. It would be unfair to view this change of opinion as in the nature of a turn-coat. It should not be difficult to see that the Republican can, with perfect honesty, recognise the need for new experiments and offer to support the President whenever he may be in the right. To what extent such Republicans were sincere in the promises that they made to the electorate, is, perhaps, more than one can say. But that the professed Republicans should have seen the necessity of affording such an assurance to the public, is a tribute to the popularity which Mr. Roosevelt enjoys. Such republicans as had made this timely change of opinion succeeded in obtaining the suffrage of the people.

As for avowed Democrats, they have had an easy walkover in the electoral contests. In these elections, the United States chose a new House of Representatives, a third of the Senate and new Governors and State Legislatures. There is thus ample opportunity for the sovereign people to make its opinion felt on the legislation and public policy in general. And in all these, the Democrats have had a thumping victory. They were from the outset full of confidence, expecting to secure a two-thirds majority in the Senate as well as the House ; and this should enable them to override any attempted obstruction by the Republican minority, by enforcing the "gag" rule on debate. As mentioned earlier, the change of faith announced by some of the republican candidates, left no room for doubt as to the place which Mr. Roosevelt occupied in the minds of the people. And pretty early on the election day it was clear that the Democrats were having an even better victory than they could have hoped for in their most sanguine moments. The extent, to which republican faith has lost its appeal to the public, is seen in the large majorities by which the Democrats led in each contest. In the New York State Senator Copeland, one of the few candidates personally endorsed by President Roosevelt, led his Republican opponent by 49,427 votes to 34,813 votes. In the Northern section of the States the Republican strength is generally thought to be high. But even here Governor Leigh Lehman led by 26,500 votes out of a total of 173,721 votes in 382 districts outside New York city. West Virginia and Maryland reported leads for the Democratics senators. Georgia, Mississippi and other Southern states returned all Democrats as usual. Warm Springs voted solid for the democrat cause ; and so did, of course, Georgia, which Mr. Roosevelt has adopted as his home in the South. The latest election figures available up to the time of writing are as follows, the figures in brackets representing the strength of parties before the elections.

	Senate.		House of Reps.	
Democrats ...	69	(60)	320	(313)
Republicans ...	25	(35)	102	(117)
Other parties ...	2	(1)	10	(5)

These figures may be taken as more or less final as only three seats in the House of Representatives remain to be filled. The significance of these results can hardly be mistaken. For the first time since the Republican party was organised, the Democrats have a two-thirds majority in the Senate. In the House of Representatives, the Democrats had formerly 313 seats, the Republicans 117 and the other parties 5. The extent, to which the Republicans have lost in the Senate and in the House of Representatives shows how much the party has suffered in America to-day by presenting itself as the opponent of economic experimentation. As things are, there can be no doubt that the Administration would have a free hand, so long as they do not show signs of anxiety to rest on their oars.

More important than the fall in the number of Democrats is the personnel of the losing Republican candidates. Such sturdy Republicans as Senator Reed in Pennsylvania, Senator Robertson in Indiana and Senator Fess in Ohio, have been swept aside. In New York, Democrats have succeeded to power for the first time after twenty years. In California Mr. Upton Sinclair has succeeded in pulling over half a million votes without the full aid of the party machinery. Such is the triumph of the Democrats. The Administration will not have to desist from a further experiment merely on the ground of lack of support in the Legislature.

Though the first feeling of Mr. Roosevelt in regard to the elections might be one of elation at an unprecedented success, it is not altogether certain that the very completeness of the success will not give rise to new problems. The detached observer has still to put himself the question: What really did the American public cast its vote for in returning Demo-

Air Mail Week

crats in such a large majority to Congress? The American Recovery programme to-day is such that not one interest, even if it be of the masses, can support all the composite measures with the same degree of cordiality. For while one part of the scheme may help one interest, there might be, and there are, other parts which affect that interest adversely. The programme is in reality an assortment of a number of measures, devised for the various departments of national economy lacking that element of co-ordination which will assure the public that there is a pull all in one direction. So that it cannot be said that the public voted for any particular set of measures. Even if the voter had tried at a comprehensive understanding of all the measures contained in the recovery programme, he would have signally failed. It might be that the voter felt that, after all, Mr. Roosevelt has no axe to grind, either in the crude sense of furthering his own interest or in the more refined sense of being interested in a particular set of measures. The President has all along advertised his open mind, by which he meant that the moment any one of his measures was proved to be ill-advised, he would be prepared to change it for a better one. And relying on this assurance of being ever ready to try new measures, the people might have thought that Mr. Roosevelt is the man to put his shoulder to the wheel of American economy. Between the various specific measures of recovery and the personality of Mr. Roosevelt, there is no doubt the average man must have preferred the latter. For in moments of extreme economic distress such as the present, the masses like to feel that the interests are confided in one sagacious person rather than in any set of abstract principles or in a set of administrators, however able and disinterested. For democracy in its moments of disillusionment turns suddenly to some form of one-man rule ; and in the case of America, Mr. Roosevelt is assuredly the man.

So that we arrive at the point that the American elections are not so much a vote of confidence in the particular measures adopted by Mr. Roosevelt as in Mr. Roosevelt himself. And this means that what the people want is not so much the industrial code or devaluation or the reconstruction of banking as an administration which will be constantly watching the course of national economy, and devising measures, to the best of its light, to improve the position. In other words, they do not want an administration which will wait with folded hands for the natural forces of recovery or entertains belief in any form of fatalism. In returning such a large Democratic majority, the American people have shown their definite preference for experimentation in the sphere of economic policy.

Is it not possible that this renewed emphasis on experimentation comes at a somewhat inopportune moment? Recent utterances of Mr. Roosevelt are calculated to raise the doubt whether Mr. Roosevelt is not somewhat losing in his faith in constant experimentation. Whether or not he is prepared to adopt new measures in other spheres, it seems fairly certain that in the sphere of monetary policy he is not inclined to indulge in new schemes of unpredictable consequence. His address to the American bankers breathed a note of conservatism, which cannot be explained by the fact that he was speaking to the stronghold of monetary orthodoxy. The ebbing faith in new monetary experiments was unmistakable ; and the fact that at the end he held out a threat to the bankers, should they choose to persist in the attitude of unsympathetic indifference to the requirements of recovery, does not alter the essential tone of the speech. And it is also significant that the latest experiments in the monetary sphere, namely, the Silver Purchase Policy and the attempts to raise the price of silver, have not been quite successful. As is well known, it has encountered bitter, almost determined, opposition from China. The action of China in levying a high export duty on exports of the white metal and the certainty that the tax on profits would effectually prevent *arbitrage* movement of any kind, show that the Silver Policy, in so far as it concerns the acquisition of silver for the Treasury, is doomed. This is the first serious check Mr. Roosevelt has experienced. In earlier instances he has been able to cover up the defeat by other manoeuvres. But here it would appear the defeat would have to be owned sooner or later. It might well be that the tone of conservatism adopted in his address to the Institute of Bankers was in itself a confession of defeat to some extent.

If then Mr. Roosevelt is not in a mood to engage in new experiments, the success of the Democrats at the polls, far from being a source of strength, might be a source of embarrassment. The Democrats who have been returned to the Legislatures include among their ranks a number of monetary cranks, rank inflationists, supporters of silver, clamourers for further depreciation and so on. If these various groups should grow clamant in Congress, then Mr. Roosevelt might be experiencing a difficult time. Congress would be the scene of divergent viewpoints arising from the rank and file of the Democratic party itself. Out of the *impasse* which this threatens, the only escape lies in the suavity of Mr. Roosevelt's personality. In the past Mr. Roosevelt has overcome many an embarrassment by bringing his personal influence to bear on the obstructionists. The task should be easier, when the men he has to deal with are men all of his own party. It is not impossible that the Democratic candidates might grow less enthusiastic about their own ideas and more determined to support Mr. Roosevelt in the plans of the moment. If the President could assuage the unrest among the labour ranks, could he not instill a greater sense of responsibility among his own party men and persuade them to pull all in one direction? But it will, doubtless, be a task for the President to maintain the Reformist zeal of the new Congress at just the pitch which suits him.

FRANCE

THE MINISTERIAL CRISIS

The inevitable crisis has happened. The Government of Truce has fallen and M. Doumergue who was called from his holiday can now go into retirement. The question of the reform of the Constitution has proved to be the bone of contention between the President and his supporters on the one hand and the Radicals and Socialists on the other. The opposition that was gaining ground all these weeks has now dealt the final blow ; and it has been virtually decided, that there is no urgency for constitutional reforms now. M. Doumergue thought otherwise and considered this question to be of such paramount importance that he could risk his political future for its sake. It is not that he was unaware of the opposition that these reforms would evoke. But he thought his broadcast speech would impress people ; and even if didn't the cause was well worth the sacrifice.

Approaching this burning question, the President said, in the course of his speech, that he would not "hesitate to seek a dissolution of the Cabinet if it is necessary to obtain constitutional reform. On my advent to power, I saw very clearly that the moral crisis, the financial crisis, the economic crisis and the grave political crisis were largely due to lack of governmental authority. . . . . If necessary, I shall appeal to the country, not by a referendum, which the Constitution does not provide for, but by a fresh election." He has thus proved adamant ; and the result is the withdrawal of the support of the Radicals. When the Cabinet met on Wednesday, M. Herriot issued his 'respectful but regretful letter' to M. Doumergue tendering the resignation of the Radical members from the Government ; and the President in his turn announced his resignation. For, as he says in his

The BRIDGEBUILDERS

BRAITHWAITE & CO. (INDIA) LTD.

CLIVE WORKS · CALCUTTA — HULUND WORKS · BOMBAY

Air Mail Week.

letter, he cannot consider the question of the formation of a Ministry supported by a Parliamentary minority. This would only furnish those, whose party favours a general upheaval and ruin, with the means of gainging the upper hand over the patriotic Republican policy that he has stood for. Quitting office, he appealed to the country to maintain the calm which is necessary for finding the best solution of the present difficulties.

There is little doubt that the downfall of the Ministry that has so successfully handled the crisis these months, is regretted throughout the country. Has he not saved the State from financial ruin? Has he not restored public confidence by forming a stable government at a time when even to form a government was a task? All this is realised. But the Reform proposals have been interpreted to be the initials stages of a Fascist Dictatorship. But one need not attribute such motives to the aged President. He is far too democratic to entertain such ambitions. The mere fact that he was brought to power at a time when any such ambitions if he had them could be refutation.

M. Flandin, who was France's Finance Minister in 1931-32, has accepted the offer of the President to form a government. He has endorsed the Radicalist attitude on the questions of Budget and Constitutional reforms ; and in broad outline his policy with regard to foreign affairs will be the same as that followed by the Doumergue Ministry. But in Home affairs an immediate vote on the Budget and a campaign for economic recovery against the present high costs of living and against unemployment form the chief items in his programme. He has also favoured constitutional reforms, but has assigned them a place next to the Budget and the battle against the depression. In agreement with the Radicals his reforms will be confined to the three points: restricting private members from proposing expenditure, automatic reapplication of the previous years' budget if the current years' budget is not voted in time and the constitutional status of the civil servants. He will sing the chorus with the Radical supporters on the question of the Senate's prerogatives.

The Bourse reflected the crisis in a share fall in the Rentes with Perpetual Threes below 70 for the first time since April and the 1932 Four and a Halfs at 85. Professional operators made fresh bear attacks with the result that values often lost a good deal of ground in the absence of any supporting influence. Industrials were quiet and irregular. An undertone of nervousness is also noticeable in the foreign exchanges. The French currency has been weak of late as have been other gold currencies, particularly against the dollar ; and this has brought about a movement of gold from Paris to New York. The market view of the outlook of gold is scarcely a bright one, as is indicated by the fact that the forward franc was freely being offered at a discount of 15c.

For the first time for several months the Bank of France has lost a portion of its reserve during the week. The Bank Return for the week ending Saturday last discloses a fall of 7,243,000 francs which now brings the total reserve down to 82,475 million francs. This loss of gold is important not quantitatively, as this affects the French reserve only slightly, but qualitatively, since this marks the end of a steady flow of gold into the vaults of the Bank of France. During the last few days the franc has been down to gold export point to New York ; on the other hand, the price of gold in London has shown a very large premium over the French shipping parity, so that no shipments from London to Paris could be expected. The formation of the New Government and the absence of change in the financial and economic policy encourages the hope that the outlook in the money market will improve.

GERMANY

TRADE PACT WELCOMED

The new Anglo-German Trade Agreement, the main outlines of which were detailed in these columns last week, has been received with satisfaction both in English and German finanical circles. On the British side, the representatives of the woollen trade, who gathered at a mass meeting at Manchester early this week, passed a unanimous resolution that the "settlement of the German overdue commercial debts, as provided for in the Anglo-German Payment Agreement, is acceptable to cotton textile interests. It considers that the provision for payments for future trade are reasonably satisfactory and recommends that trade with Germany be resumed." Coal exporters in Hull also expressed confidence that under the new Agreement Germany would liquidate her debts. More than this, in the opinion of a prominent coal exporter, this means resumption of business with Germany in this line. Germany has been willing to buy coal from this area recently; but owing to the embargo among the North East Coal Companies orders have been rejected. Shipping interests will also be benefitted, as they are now having only a restricted trade. With the resumption of exports to Germany, they will enjoy a greater portion of this carrying trade.

In Berlin, however, the satisfaction is not unmixed. The financial authorities are concerned more with the avoidance of the clearing, which the Britishers threatened; and in so far as this has been achieved, the Agreement is welcomed. Business circles, therefore, expect that trade relations between the two countries will begin to show an upward trend; but the German Press would prefer to be more cautious and points out that time alone can show whether the hopes expressed will materialise. Some papers would, therefore, issue a mild note of warning and say that there should not be "over trampling" in the effort to purchase British goods, in case British purchasers of German goods should not keep pace. In the case of imports fresh problems would emerge as a result of this step; and it is hoped that the necessary discipline will be exercised.

But there need not be any such pessimism about further complications ; for the issue of devisen certificates under article 4 of the new agreement is limited to 55 per cent. of the total value of the German exports to Britain. This provides an automatic adjuster in that no certificates will be issued in the absence of any devisen receipts. The "Frankfurter Zeitung" is pleased that the fundamental principle of Dr. Schacht, according to which imports depend directly on the amount of devisen available, has been acknowledged by Britain. This arrangement not only provides for the satisfaction of outstanding debts but also clears the way for further trade ; and considering the debt question which is ever in the front ranks of Germany's pressing problems, this opportunity for reviving trade is welcomed.

The satisfaction is marred by the rumour that the United States of America is preparing a new note of protest against Germany on the basis of the Anglo-German Agreement. As usual, they will allege discrimination against American bondholders. When Germany denounced the Trade Treaty three weeks back, a protest was made ; unfortunately the American creditors do not appear to appreciate the position in Germany. The trade figures have throughout been adverse with U. S. A. ; to be more correct the adverse balance has been yearly increasing, with the result that it is becoming increasingly difficult for Germany to find the necessary devisen. If the agreement that has been concluded with Britain and the negotiations that preceded it were studied by the Washington authorities they would recognise the necessity of taking more goods from Germany and the question of payment of bondholders will cease to give as much concern as it does now.

JUTE AND JUTE GOODS

JUTE

Calcutta, Nov. 22.

Very steady conditions have prevailed in the jute market during the week under review. December futures is quoting Rs. 29-8 as against Rs. 27-8 a week ago. Fairly good interest was shown by shippers in the local market and there were buyers up to Rs. 28 for November firsts. In the London market very good business was done at £16 and over. After a long period buying interest was shown by German spinners, and this has been a great steadying factor in the market. Speculative tendency is very steady but the buyers at the moment seem to be fully satisfied and a small decline in the present value will be quite natural and not unexpected.

The imports in mofussil area which were showing a decline last week are again showing an increase and as the prices go up the imports are likely to show further increase: anyway the tendency of the market is fully steady.

JUTE MANUFACTURES

Calcutta, Nov. 22.

The hessian market at the outset opened quiet, with little business passing, and rates showing some tendency to decline. Later, in sympathy with the raw material, the tone became firmer, and towards the close of the period a fair business was transacted with mills for deliveries up to September, 1935. Consuming demand has been limited to small parcels for early shipment, and the forward buying appears to have been chiefly of a speculative nature.

Heavy Goods have followed the trend of the Hessian market, and during the second half of the period a large business was done by Mills for all deliveries up to October, 1935, at slightly higher rates. Cornsacks and B. Twills in particular have been in demand, but most descriptions have met with attention.

Total reported sales for the week ending Saturday the 17th November, 1934.

	This and next month. Yds.	Forward. Yds.

COTTON AND COTTON GOODS

COTTON

Calcutta, Nov. 22.

The activity of the previous week has subsided and the market is definitely quiet, prices remaining steady. Earlier heavy deliveries of winter goods to out-stations have apparently met requirements as there has been practically no sales during the week of imported or indigenous lines. Much the same may be said of the forward goods position.

In sympathy with piecegoods the yarn section developed no special features. Prices are firm for 22's and 40's grey owing to a temporary shortage of stocks.

The total yardage of piecegoods imported increased from 14 million in October, 1933 to 33 million in October, 1934, and the value advanced from Rs. 23 lakhs to Rs. 51 lakhs.

BULLION

GOLD

Calcutta, November 22.

Both in London as well as in Indian markets the conditions were very dull and practically there was no change in prices. London gold was quoting £6-19-5½d. and Bombay Rs. 34-10-0 per tola.

The export from Bombay has once again increased to Rs. 63 lakhs. Stocks and daily offtake have, however, remained unchanged.

LONDON—Air Mail Week.

The Bank of England gold reserve against notes amounted to £192,001,187 on the 31st ultimo, showing no change as compared, with the previous Wednesday.

During the week the Bank announced the purchase of bar gold to the amount of £49,143.

In the open market offerings were rather restricted, the amount available during the week being about £970,000. The demand was again general and owing to the appreciation of sterling in terms of the gold exchanges, there was a decline in prices, which, however, were maintained at a premium over the parities.

SILVER

Calcutta, November 22.

Quiet but steady conditions have prevailed in the silver market during the current week. Early in the week due to bull liquidation and also heavy sales by a speculator silver in Bombay came down from Rs. 68 to Rs. 66 but later on better advices from Shanghai and Chinese and Indian buying in the London market, prices have once again gone up and the largest quotations are Rs. 67-4. The undertone of the market is fully steady.

London—Air Mail Week.

The market has been fairly active, the tendency towards the end of the week being easier, following the firmness of sterling in terms of the dollar; the undertone, however, remains firm. The Indian Bazaars have been less

active, but there has been some speculative demand, offset by China sales. America has bought and although not being disposed to press, generally offered good support at, or slightly below current prices.

The following were the United Kingdom imports and exports of silver registered from mid-day on the 29th ultimo to mid-day on the 5th instant:

SUGAR

Calcutta, Nov. 22.

The comparative superiority of the Coimbatore variety of sugarcane, which has been substituted for the crop hitherto grown in the Nizam Sagar Canal area, is referred to in a Press communique which says that this variety has been found to be capable of standing without props and therefore does not need wood supports, of which there is a dearth in the State. The communique adds that since the introduction of this variety of crop in 1929, more than 4,000 acres are now under cultivation in the Nizamabad district alone, and cultivators are very keen on extending it.

WORLD SUGAR MARKET REPORT

Semarang, 5-11-34.

Our last report was dated the 22nd October when we issued details of Exports from Java for September, also for the period April to September 1934 with comparative figures for the same period of the years 1932 and 1933.

Advices from abroad have not been at all encouraging for the general sugar situation. London prices for Raws declined 4½d. on all positions and in New York the Raw Futures market for the next year's positions lost up to 14 and 15 points since the middle of October.

Java also have been forced to make further sacrifices to make sales of Importance, and although the sales reported of the larger parcels of Whites for Indian and China markets, also Browns, were kept secret as to prices, it is generally understood that concessions were made. As regards India the only interest has been from the West ports, where the sterling prices have been on the decline, current sellers quotations in Bombay ranging from 5/10⅛ per cwt. for ready to 5/4½ per cwt. for forward shipments. A similar condition has prevailed in China. Under the circumstances it can be expected that export business with these markets has been extremely difficult.

During the period under review we have received new forecasts of the European Beet crop, indicating a large increase, and also of the Indian growing cane crop, details of which are quoted later in this report. The New York market is fairly well maintained for this year's deliveries, and reports are that the Cuban Committee have been negotiating with Refiners for further large parcels with a view to filling quota for the U.S.A. for this year.

Our local market shows little change, and the trading for home consumption and island shipments has been maintained, although generally it is believed there is a falling off as to quantity taken up.

The total sales by the N.I.V.A.S. according to lists, since the 15th October, were about 45,500 tons Whites and 21,760 tons Browns, the sales as per lists being:—

October 16th list	...	3,000	tons	BROWNS
,, 20th ,,	...	2,284	,,	WHITES)
		852	,,	BROWNS) mostly for home consumption and island shipments
,, 24th ,,	...	2,430	,,	WHITES)
		911	,,	BROWNS)
,, 27th ,,	...	7,541	,,	WHITES includes 1,400 tons to Bangkok 1,100 tons for China
		12,546	,,	BROWNS includes 12,000 tons for China Refiners
,, 31st ,,	...	26,336	,,	WHITES includes 20,000 tons for India and about 4,000 tons for China
		1,362	,,	BROWNS
November 3rd ,,	...	5,991	,,	WHITES includes about 4,000 tons for India and China
		2,773	,,	BROWNS includes 2,000 tons for Japanese buyers

The total sales to 3rd instant as per lists issued being:—

WHITES	...	1,794,488	tons
BROWNS	...	760,083	,,
SOFTS	...	9,570	,,
MOLASSES	...	65,232	,,
Total	...	2,629,373	tons

Java estimated production for the present crop as on 1st October, 1934 was:—

WHITES	...	537,712	tons
BROWNS	...	88,204	,,
MOLASSES	...	15,874	,,
BAGSUGAR	...	50	,,
Total	...	641,840	tons

China Markets. Hongkong.—Small sales have been reported to this market at reduced prices. Whites were sold for prompt shipment at F. 2.65 per picul CIF down to F. 2.55, which prices are difficult to reconcile with Java parity prices. Buyers generally are reluctant to make commitments. At the same time exchange uncertainty has continued to hamper business with this market. Sales of Browns have been reported to the Canton authorities for refining purposes, the quantity said to be 10,000 tons, but details are not to hand. For local trading Browns were offered at F. 2.50 per picul CIF Hongkong.

British India—The only market showing interest has been Bombay. Java Whites were in demand for November shipment at 5/8½ per cwt. CIF which at the time was below our parity. On sterling exchange improving business for the same shipment was done at 5/6 per cwt. CIF. Buyers were also interested in January to March shipments and business done at 5/4½ per cwt. CIF, but later buyers ideas were reduced to about 5/2½ only. Our latest advices are that there are sellers for November/December shipment at 5/5 and for January to March at 5/4½.

As the earlier sailings for Calcutta were already fully booked, an intermediary steamer was indicated, but no inducement was forthcoming to berth this vessel. There is no further shipping opportunity to this market until middle of December.

Stocks on the 3rd instant were advised as:—

CALCUTTA	...	4,800	tons
MADRAS	...	1,400	,,
RANGOON	...	2,300	,,
BOMBAY	...	5,600	,,
KARACHI	...	7,500	,,
BHAVNAGAR	...	4,000	,,
BEDIBUNDER	...	1,000	,,

On present limits and exchange we quote WHITES CIF:

CALCUTTA, MADRAS, RANGOON, November/December shipment 5/7⅛ per cwt.

COLOMBO, BOMBAY, KARACHI, November/December shipment 5/6½ per cwt.

On the 26th October we received from the Sugar Technologist at Cawnpore the second forecast of the Indian growing sugar crop as 3,444,000 acres (the first estimate was 3,409,000 acres).

London.—Terminal Raws lost 4½ all round since the middle of October. No special features have been reported to account for the decline except that Refiners continue to exert their depressing influence with a view to taking up Australian Sugars which are paid for at the price ruling on the exchange at the time of arrival. It was also reported that 8,500 tons Mauritius Sugars were purchased by Brokers at 8/9⅜ CIF and hedged on the Terminal market.

Java Whites were offered CIF Port Said at 5/7½ per cwt., shipment up to March with some business done.

Java Whites C. & F. India were offered in London at 5/4½ for January/February/March shipment.

Closing buyers prices on London Terminal Raws Exchange were:—

	Dec.	Mar.	May	Aug.
October 15th ...	4/4⅜	4/6½	4/8⅛	4/10¼
,, 22nd ...	3/3	4/5	4/6½	4/8½
,, 31st ...	4/0½	4/3	4/4⅜	4/6⅜
November 3rd ...	4/0¼	4/3	4/4⅜	4/6¼

LICHT'S estimate for European Beet Crop at 31st October was increased by 129,000 tons to 6,721,000 tons.

New York.—The only sales reported in the interval have been:

October 15th 5,000 tons CUBANS at 1.95 cents ex warehouse, and October 29th 2,000 tons CUBANS at 1.82 cents ex warehouse.

Cuba Institute were reported to be negotiating for American Refiners for the disposal of 360,000 tons in order to secure the benefit of this year's quota. We understand that a price guarantee would be given, and also some undertaking relative to the first shipments ex the 1935 quota being held over until 1st March 1935. New York cabled that the Institute were holding for a price of 2.18½ cents C & F New York.

Raw Futures have lost considerable ground, especially for the new year positions and losses of 15 points have been recorded since the 15th October as shown by the following closing prices:—

	Dec.	Mar.	May	July	Sep.
October 15th ...	1.86	1.82	1.86	1.89	1.93

New York advise that the Sugar Exchange Officials recognising that under the Costigan-Jones Bill the breadth of the Sugar Futures Market would be narrowed, have decided to liberalise their contracts for trading. A new contract is expected to become effective after the turn of the year under which it will be possible to buy and sell on the Cuban basis with delivery of duty frees and U.S. Continental cane Raws permitted.

Mauritius.—October reports that all sugar mills are now operating. Results are reported to be disappointing and the total crop is not expected to yield more than 185,000 tons. Of this about 112,000 tons are said to have been already sold.

Union of South Africa.—October reports give the estimate of production for the current season as 345,000 short tons (compared with 371,173 actual production for the last season.)

Exchange.—Sterling has improved during the last week. To-day's Banks buying rate 3 days sight on London quoted at F. 7.31¼ per £ delivery to the end of December and probably later.

TEA

Calcutta, Nov. 22.

There was a good demand for all types. Forward prices were maintained and Orange pekoes and pekoes, especially those having good make, advanced about 4 As. per lb. Broken goods were also in good demand, prices advancing by 3 to 6 pices per lb. Generally speaking the market may be said to have been strong.

The following are the full particulars of Sale No. 23.

Tea with Export Rights.

MISCELLANEOUS

WHEAT

Calcutta, Nov. 22.

A confident tone rules the local market, though prices have not hardened. There has been business in the principal grades. Lyallpur and Amritsar are optimistic and the tendency is to forego business rather than quote lower rates. The trade thinks that wheat cannot decline further and that higher prices are indicated.

Weather conditions in Northern India are not favourable. Sowings have commenced in the United Provinces and the Punjab, where without adequate moisture a restricted outturn is anticipated.

Beta values have been well maintained, with liquidation of week holdings.

Karachi stocks have decreased by 20,000 tons, approximating 50,000 tons.

United States markets have ruled quiet in face of the position that the droughtsome months back is responsible for a smaller return than estimated. In Australia the crop is doing well.

Latest import and export figures for the three main British Indian ports concerned with wheat according to the *Indian Trade Journal* for the period April 1 to November 3, 1934 and the corresponding period of 1933 are:—

Imports.

GROUNDNUT

Calcutta, Nov. 22.

Reports from Madras state that shippers' buying limits have advanced from Rs. 23-8 to Rs. 24 and Rs. 24-14 for machined per French dandy of 531 lbs., ex-coast godowns. The total arrivals at Pollachi during the season just closed amounted to 300,000 bags of kernels and total purchases are in the Neighbourhood 220,000 bags. During the week ended November 10 Madras received 4,525 bags or 358 tons against 17,527 bags or 1,380 tons during last year's corresponding work.

The market has been quiet, with starting prices receding to £11-6-3 December sellers and £10-2-6 January paid. The latest reports quote £11-8-9 December sellers and £10-6-3 January sellers.

In the absence of November freight, Dealers will have to sell for Madras or Cuddalore port delivery, losing about Rs. 1-4 per candy on account of higher railway freight.

STATISTICAL INFORMATION

RAILWAY TRAFFIC

The total approximate gross earnings of all State-owned railways for the week ending 3rd November, 1934 (31st week), amount to Rs. 163 lakhs, Rs. 1 lakh more than the figures for the preceding week as well as the actuals for the corresponding week of the previous year and Rs. 14 lakhs more than the actuals for the corresponding week of 1932-33.

The total approximate gross earnings from 1st April to 3rd November, 1934, amount to Rs. 51·3 crores or Rs. 297 lakhs more than the actuals for the corresponding period of the previous year and Rs. 385 lakhs more than the actuals for the corresponding period 1932-33.

The following are the up-to-date approximate gross earnings and working expenses of the State-owned railways from 1st April, 1934, as compared with the actuals of the corresponding period of last year:—

Railways.	Earnings. Up to 3-11-33 (in lakhs.)	Earnings. Up to 3-11-34 (in lakhs.)	Working Expenses.* Up to 30-9-33 (in lakhs.)	Working Expenses.* Up to 30-9-34 (in lakhs.)
	Rs.	Rs.	Rs.	Rs.

Other Railways ...	22	25	10	11
Total ...	4,806	5,103	2,400	2,436

*Including suspense but excluding appropriation to and from from depreciation fund.

A comparison with the figures of the previous week for the principal State-owned railways shows Increases in the approximate gross earnings of all railways except the A. B., B. B. & C. I., M. & S. M., N. W., and S. I. A comparison with the actuals of the corresponding week of 1933 shows Increases in the approximate gross earnings of the B. N., B. B. & C. I., E. I., and N. W. Railways.

WAGON LOADINGS

Comparisons of figures of wagon loadings on Class I Railways for the week ending 3rd November, 1934, and for the cumulative period from 1st April to 3rd November, 1934, with the corresponding periods of the previous year are as follows:—

During the week ending 3rd November, 1934, there were loaded on the broad gauge 77,135 wagons, being 3,438 more than in the corresponding week of the previous year, or an increase of 4·67 per cent. On the metre gauge there were loaded 42,774 wagons, being 1,828 fewer than in the corresponding week of the previous year or a decrease of 4·10 per cent.

For the period from 1st April to 3rd November, 1934, there were loaded on the broad gauge 2,339,441 wagons, being 161,524 more than in the corresponding period of the previous year, or an increase of 7·42 per cent., and on the metre gauge 1,458,373 wagons, being 83,554 more than in the corresponding period of the previous year, or an increase of 6·07 per cent.

JAMNAGAR & DWARKA RAILWAY

The gross earnings of the Jamnagar & Dwarka Ry. for the five months ending August, 1934, are Rs. 6,46,550 as against Rs. 6.02,693 compared with the same period of the preceding year. The working expenses and net earnings for the above period are Rs. 2,93,282 and Rs. 3,53,288 as against Rs. 3,75,798 and Rs. 2,26,895 respectively during the last year.

The gross earnings, working expenses and the net earnings during August, 1934, are Rs. 1,16,938, Rs. 58,538 and Rs. 58,420 as against Rs. 1,02,770, Rs. 85,457 and Rs. 17,313 during the same month of the last year.

Thus there is an increase of Rs. 43,857 in the gross earnings and Rs. 1,26,393 in the net earnings with a drop of Rs. 82,516 in the working expenses during the first five months of the financial year, *viz.*, April to August, 1934.

Investor's Supplement

Vol. XIV. No. 21 SATURDAY, NOVEMBER 24, 1934 Price Re. 1

THE WEEK IN THE EXCHANGES

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Friday Noon,
November 23, 1934.

The feature of the week has been the strong and active demand for Jute Mills' shares at all round advancing rates following general enquiry from investors. Government Securities, although at times erratic, ruled generally firm. Cotton shares remained fairly steady while fresh weakness has developed in Coal shares on the publication of the tenders for State Railways coal which are generally on lower basis than that of 1934-35. The demand for Preference shares continued, while among Debentures, Calcutta Municipal and Calcutta Port Trust Loans met with a fair enquiry but scarcity of sellers accounted for the restricted turnover. Government Guaranteed Railway shares continue to be asked for, but here also, as usual, sellers were scarce. Bank shares kept steady but only a limited business was put through while certain Insurance Companies' shares were mostly on offer. Some attention was paid to Engineering companies' shares. Sugar shares shew no material change while Paper Mills' shares are a turn easier.

Rubber shares were weaker while the outlook for tea shares appears to be more hopeful.

Government Securities.—Giltedge section ruled generally firm and inspite of a reaction in India Government's Sterling Securities in London, 3½ per cent. Rupee Paper continued its upward movement and at one time touched Rs. 95-4. At the time of writing the price is, however, Rs. 95. 3 per cent. loan 1941 was marked at Rs. 100-8 while 3½ per cent. Loan 1947-50 was quoted at Rs. 102-6. 4 per cent. Loan 1960/70 was better at Rs. 109 and 4½ per cent. 1955/60 at Rs. 114-8; 5 per cent. Loan 1945/55 are now standing at Rs. 118.

All the medium-dated Loans met with a fair enquiry at better rates while there are more buyers than sellers for short-dated issues.

The Bank rate remained unchanged at 3½ per cent., with the percentage at 29.81.

The immediate outlook of this section is very difficult to predict, but it is believed that any possible adverse effect of the Joint Select Committee's Report on Indian Reforms has already been discounted.

Fixed Interest Bearing Securities.—The demand for Preference shares continued unabated and in several cases, further advance in prices was registered. Jute Mill preference shares were in particular demand and 7 per cent. issues may be placed on the basis of Rs. 140 ex-dividend, with the exception of Anglo India and Kelvin for which Rs. 145 was paid in each case.

Among other Preferences, Allahabad Bank 6 per cent. Preferences changed hands at Rs. 130; Darjeeling Himalayan 5 per cent. Preferences were marked at Rs. 101; Bowreah Cotton 'B' Preferences changed hands at Rs. 92; Kesoram Cotton 7 per cent. Preference changed hands at Rs. 135-8 and New Victoria 6 per cent. Preference at Rs. 5-4. Among Industrial issues Bengal Chemical 7½ per cent. Preference kept fully steady at Rs. 15-8; Burn & Co., 7 per cent. Preference at Rs. 132; Indian Standard Wagon 7 per cent. issue at Rs. 126; and Kumardhubi Engineering 7 per cent. Preference at Rs. 78. Dunlop Rubber 6 per cent. Preferences accounted for a few deals at Rs. 117 while British Ceylon Corporation 6 per cent. Preference was marked up to Rs. 6-10. Titaghur Paper 8 per cent. Preference of Rs. 40 paid-up was quoted at Rs. 64 and Cawnpore Sugar 8 per cent. Preference at Rs. 158. Among Tea Preference shares, business was reported in Banarhat 8 per cent. Preference at Rs. 140 and Choonabuti 8 per cent. Preference at the same figure. Namburnadhi 10 per cent. Preference was marked at Rs. 17-6 and Tezpore 8 per cent. Preference at Rs. 12-8.

Only a small business was put through in Debentures, although keen demand existed for Calcutta Municipal and Port Trust issues.

Among Jute mills, Hukumchands and Union changed hands at last levels.

Other Investment Stocks.—With the exception of Central Bank's shares, which were marked up to Rs. 35-4 with buyers over, all other Banks' shares were quiet. Imperial Fully paids are now quoted at Rs. 1,600 and Controbutories changed hands at Rs. 402. No transaction of any importance was recorded in any other Banks' shares.

Among Railways the usual demand for Government guaranteed shares continued unabated, but offerings were very much restricted. Bankura Damodar recorded deal at Rs. 86 and Katakhal Lala Bazar was marked up to Rs. 88. Among companies, enjoying District Board subsides, Buktiarpur-Behar was still in request at Rs. 67 but sellers' ideas were little higher. Arrah-Sasaram was dealt in at Rs. 58. There are, however, sellers of Hoshiarpur-Doab at Rs. 93; Mymensingh Bairab-Bazar (rebate) at Rs. 90 and Sara-Serajgunj at Rs. 93.

Among Insurance Companies, Concord of India was marked up further to Rs. 12-6 premium and Triton changed hands at Rs. 127.

Cottons.—A slightly more interest was in evidence in cotton shares but business was mainly confined to professional operators and of speculative nature. A fairly large business was reported in Kesoram round about Rs. 5 while Dunbar (ordy.) was marked down to Rs. 145-8; Bowreah Ordinary was quoted at Rs. 348 and Muir Mills (ordy.) at Rs. 342. Benares cotton and Silk recorded a deal at Rs. 1-13 and New Victoria (ordy.) at Rs. 1-15.

Coals.—Dull conditions have obtained in coal shares and trading was very much restricted although at one time on Wednesday some recovery was made due to bear covering. Fresh weakness, however, developed on Thursday on the public action of tenders for the supply of coal

THE INDIAN CABLE CO., LTD.

NOTICE

is hereby given that the fifteenth Ordinary General Meeting of Shareholders of the Indian Cable Co., Ltd., will be held at the Registered Office of the Company, 2, Waterloo Street, Calcutta, at 4-15 p.m. on Tuesday, the 18th December, 1934.

The Share Transfer Books will be closed from the 11th December to 18th December, 1934, both days inclusive.

By Order of the Board,
BRITISH INSULATED CABLES, LTD.,
Managing Agents.

Calcutta, 16th November, 1934.

to state-managed and certain company-managed Railways for the year 1935-36 in which the prices offered are in the main appreciable lower than that was offered during 1934-35. Consequently the margin of Profit will be much more lower during the ensuing year.

Bengal was marked down to Rs. 225, Burrakur (ordy.) to Rs. 12-12; Equitable (ordy.) to Rs. 23-8; New Beerbhum (ordy.) to Rs. 12-12; Bhulanbararee to Rs. 7-4; Bokaro and Ramghur to Rs. 8; South Karanpura to Rs. 4-4 and Talcher to Rs. 1-15.

Amalgamated kept barely steady at Rs. 21-4 and Pench Valley at Rs. 43-8. Exceptionally, however, New Manbhum remained very firm and on the publication of its excellent report announcing a dividend of Rs. 2-8 per share for the half-year ended 30th September, 1934, was marked up sharply to Rs. 55-8 cum-dividend.

Government's intention regarding the restriction scheme is still awaited with anxiety; although in certain quarters, it is felt that the scheme has been abandoned.

Jutes.—Although commodity market ruled steady with 9 Porters Hessians quoting at Rs. 8-11 at the time of writing and Raw jute round about Rs. 29, Jute mills shares were very firm during the period under review and as the session progressed more buying power developed and a brisk business was reported at all round advancing rates, inspite of the rumours of the erection of two jute mills in mofussil jute growing districts.

Genuine investment demand was definitely in evidence from upcountry and also from foreign markets owing to extremely cheap money and in view of the comparatively higher yield obtainable in Jute mills shares on the present dividend basis.

Apart from Howrah and Kamarhatty which advanced to Rs. 56-8 ex-dividend and Rs. 595, the later owing to a rumour of a better dividend. Anglo-Indias were marked up further to Rs. 452 ex-dividend and a very large business was completed at round about that figure. Bally also was very popular and from a quotation of Rs. 203 ex-dividend, business was reported upto Rs. 212 ex-dividend. Barnagore was also very firm at Rs. 175; Belvedere was very strong and advanced to Rs. 412; Fort Gloster was marked upto Rs. 600; and Gourepore to Rs. 665, Kelvin improved to Rs. 600; Lawrence to Rs. 535; New Central to Rs. 392; Standard to Rs. 360; and Union to Rs. 500. On the whole all first class stocks registered advances of 20 to 25 points during the course of the week.

Among rupee 10 stocks Clives are now very firm at Rs. 33-8; Hukumchands at Rs. 15; Birla at Rs. 16 and Nationals at Rs. 26. Presidency was marked at Rs. 6-2, Nuddea accounted for a large turnover round about Rs. 56.

At the time of writing outside demand appears to have satisfied for the time being and prices are somewhat below the best.

Electricals.—A fair business was reported in Electric Supply Companies shares and although prices show no material change, many shares were on offer at last levels. Agra Electrics were dealt in at Rs. 125; Bareilly was marked at Rs. 13-8. Benares changed hands at Rs. 14. There are sellers of Cuttack Electrics at Rs. 6 and Mirzapore Electrics were on offer at the same figure. Muzafferpore Electrics had sellers at Rs. 8-14; Muttra at Rs. 9-4; and Upper Jumna at Rs. 10-2. Dacca, Patna and Rawalpindi were also on offer at last levels, without attracting buyers.

Engineering.—A little more interest was taken in shares of Engineering concerns. Arthur Butler kept steady at Rs. 13-4; Bengal Iron was marked at Rs. 3-12 and Indian Iron and Steel at Rs. 6-12. Burn & Co. ordinary account for a deal at Rs. 271-8, Indian Galvanizing remained steady at Rs. 9-2; Indian Standard Wagon Ordinary at Rs. 53; Kumardhubi Engineering Ordinary at Rs. 3-8 and Marshalls at Rs. 1-4; Saran Engineering crossed at Rs. 11-4.

Sugar.—Sugar shares disclosed no fresh feature. Balarampur was unchanged at Rs. 18-12; Carew & Co. recorded a few deals round about Rs. 21-4; Cawnpore (ordy.) was marked at Rs. 35-8; Champaran at Rs. 23-12; New Savan at Rs. 13-12; and Samastipore Central at Rs. 12; Murree Brewary recorded a deal at Rs. 197 and South Behar at Rs. 14. The tone at the time of writing is quiet but steady.

Miscellaneous.—In this section a fair general business was reported but prices with the exception of a few remained stationary. Bararee Coke was marked at Rs. 11-14 and Burma Corporation at Rs. 8-8; Calcutta Tramways (ordy.) changed hands at Rs. 19-12 ex-dividend. Indian Wood Products kept steady at Rs. 36-12, Howrah Oil at Rs. 11-12 and Tide Water Oil at Rs. 9-8.

Paper Mill shares were easier. Bengal Paper Ordinary is an offer at Rs. 104 and Titaghur Paper Ordinary had sellers at Rs. 21-8. Upper India Couper Mills shares recorded a deal at Rs. 131.

After some interval, Midnapore Zemindary was a bright feature and the rate advanced to Rs. 76. Bengal Timber kept steady at Rs. 145. Among shipping shares, Calcutta Landing recorded a deal at Rs. 12-10 and Indian General Navigation Ordinary at Rs. 110.

Rubbers.—Rubber shares were generally weak and only a limited business was put through.

Teas.—The undertone in Tea shares continued very steady although trading was on a restricted scale and limited to more popular stocks. Investors and Speculators are waiting for publication of next year's export quota which is expected at the end of the current month. Reports of Tea sales are somewhat better. Locally Bishnauth was marked up a rupee to Rs. 34; Hathikhira to Rs. 29-4 and Hasimara to Rs. 45-12. Central Cachar was dealt in at Rs. 89; East India at Rs. 14-4, Huldibari at Rs. 27-8 and New Terai at Rs. 13-12. Rydak quoted Rs. 55 and Sarugaon at Rs. 13.

BOMBAY STOCK EXCHANGE

(*By Wire*)

(From Our Correspondent)

Bombay, Thursday Evening,
November 22, 1934.

Money Market.—Money was easy, with inter bank call quoting ½ to 1 per cent.

Exchange.—The market was steady with Banks selling T. T. at 1s. 6 3/64d. for November/December; 1s. 6 1/32d. for January/February and 1s. 6d. for March/July. Banks are buying 3 months bills at 1s. 6⅛d. for November-December.

Securities Market.—Encouraging sterling advices, coupled with easy money conditions, partly due to heavy Treasury maturities, pulled up the Securities market from lethargic conditions. 3½ per cent. Paper advanced from Rs. 92 to Rs. 95-8 and closed easier on quiet London advices at Rs. 94-14. 3 per cent. 1941 closed at Rs. 100-7; 1947/50 at Rs. 102-7; 1948 at Rs. 105-7; 1960/70 at Rs. 109-1; 1955/60 at Rs. 114-8; 1935 Loan at Rs. 101-11; 1939/44 at Rs. 108-6; 1940/43 at Rs. 109-6; 1938/40 at Rs. 109-6; 1945/55 at Rs. 117/14; 6½ per cent. Bonds 103/4 and Bombay Development at Rs. 103-13.

Shares.—In spite of the sagging tendency evinced during the beginning of the month, as a result of overbought position, encouraging developments like strength in the giltedged, higher cotton and silver prices and easier money conditions resulted in active markets, with good improvement recorded in dividend-paying shares when the market opened after long holiday on the 15th. With continuation of strength in the Securities, market improved though closed quiet on account of bull unloading and slight easiness in paper market. The publication of Joint Select Committee Report of the White Paper has not affected this market much. Continuity of easy money conditions is expected to pull up the market.

Textiles.—Mill shares, which ruled at low levels at the close of last week, took a better turn and advanced appreciably though the closing was at lower levels. Dyeing were done as low as Rs. 855 also as high as Rs. 912-8 and closed easier at Rs. 891-4. Central Indias rose to Rs. 327-8 from Rs. 290 and closed at Rs. 315. Since the mills are working extra time, shares of the Companies like Bombay Dyeing, Centrals, Gokaks, Century, *which have no debenture capitalisation, stand to benefit most; therefore, leading counters like the above are worthwhile for accumulation.* Century closed at Rs. 308-2; Colaba at Rs. 183-2; Gokak at Rs. 173-12; Indian Bleaching at Rs. 153-12; Indore Malwa at Rs. 116-4; Kohinoor at Rs. 213-2; Lakshmi at Rs. 855; Morarji at Rs. 1,510; New Great at Rs. 211-4; Sholapur at Rs. 2,900; Simplex at Rs. 99-6; Swadeshis at Rs. 227-8; Vishnu at Rs. 1,595.

Hydro Electrics.—The revenues of this group, specially Andhra and Hydro are increasing. *We therefore recommend purchases of all these three shares on every setback from the long range point of view.* Andhras which were at Rs. 1,545 in the begining of this month had a sudden rise to Rs. 1,670 and closed easier at Rs. 1,646-4. Tata Hydros improved from Rs. 156 to Rs. 163-6 but closed at Rs. 162-8. Powers are down at Rs. 1,342.

Iron and Steel.—Iron and Steels have not shown any appreciable improvement with Ordinaries and Deferreds practically hovering at about Rs. 90 and 400. At the close, rumours of the negotiations with Japanese interests for sale of 2,50,000 tons of pig iron, had good effect; and Ordinaries were done at Rs. 95 and Deferreds at Rs. 410, though they closed at Rs. 93-4 and Rs. 405 respectively. New duties, that have come into force from the beginning of this month, have not had any appreciable effect on the fortunes of Tata Company, since they are well ahead upto February and currently working with maximum production. *We belive that the Company will earn about Rs. 25 lacs more than the huge profit announced during September last.* Second Preferences were done at Rs. 157-8 though they closed at Rs. 156.

Cements.—Cements were practically neglected. Gwalior Cements declared their final dividend at Rs. 4 and this share has moved up from Rs. 97 to 106-8. Bundi closed

at Rs. 31-12 ; Indian at Rs. 335 ; Katni Deferred at Rs. 1,150 ; Katni Ordinary at Rs. 325 ; Okha at Rs. 175 ; Punjab at Rs. 32; Shahabad at Rs. 335; and United at Rs. 57-8.

Miscellaneous.—Belapur sugar were done as high as Rs. 242-8 and closed easier at Rs. 235-10. The company has declared a dividend of Rs. 10 plus a bouns of Rs. 2, totalling Rs. 12, per share. Considering the financial position and handsome dividend, we expect Belapurs will reach appeciably higher levels before long. Bombay Burmas, which were below Rs. 400 for a long time, are now better at Rs. 403-12 and New shares at Rs. 132-8. *Since this is the leading speculative counter, we advocate purchases on every setback.* Telephones are high enough at Rs. 111-8 and we, therefore, prefer profit-taking. Trams were steady at Rs. 159-2; Petrols better at Rs. 4-14-6; Scindhias at Rs. 15-12; Radio Deferred and Ordinary at Rs. 520 and Rs. 485; Bombay Steam at Rs. 283-12; Constructions were neglected at Rs. 80.

Banks and Insurance.—Bank shares were steady with Imperial fully paids at Rs. 1,611-4 and Partly paids at Rs. 405. Bank of Indias at Rs. 120-12; Central at Rs. 34-14 and Barodas at Rs. 102; Unions at Rs. 5-6-6.

Owing to the strength in the Security Market, insurance shares were active. New Indias rose from Rs. 36 to Rs. 39-12; Orientals improved to Rs. 4,015 and Vulcans to Rs. 8-4.

MADRAS STOCK EXCHANGE.

(By Wire)

(From Our Correspondent)

Madras, Thursday,

November, 22, 1934.

The Securities market ruled firm during the period under review and the interest was mainly centered in 3½ per cent. Paper which saw good fluctuations on account of speculative operations. Paper touched Rs. 95-6 highest and Rs. 94-12 lowest for the week. The fluctuations between these two levels were frequent. There was a good enquiry for 3½ per cent. 1947/50 Loan at Rs. 102-6 and 4 per cent. 1960/70 Loan at about Rs. 108-15 with scrip in short supply. 5 per cent. 1945/55 loan was better at Rs. 117-15. The demand for short and medium dated loans was negligible with little business passing. Mysore loans kept steady whilst Cochin loan was offered at Rs. 111-4.

The enquiry in recent weeks for first class Preference shares tapered off Tata Iron and Steel 2nd Preferences which were a favourite to the local market, have been a dull counter around Rs. 157. Some enquiry has been noticeable for Spencers 'A' and 'B' and United Nilgiri Tea Debentures.

Banks.—Bank shares were erratic; the sellers were never able to obtain the quoted levels for Imperial Fully paids and Contributories. Locally Indian Banks and in Bombay, Bank of India, and Central Banks were firm features. *Central Banks appear to have scope for a further rise.* The feature of this section has been the persistent absorption of Indo-Commercial Banks at Rs. 10 Premium.

Public Utilities.—Public Utilities were in fair demand with hardly any changes to note. The prominent features were Tata Powers around Rs. 1,345; Bengal Telephones at about Rs. 17-8; Vellore Electrics at Rs. 13-2 and West Coast Electrics at 8 annas premium.

Mills.—Mill shares were steady in the earlier part of the week, but closed with several sellers. Buckingham and Carnatics are on offer at Rs. 211; Kaleeswarars at Rs. 242-8 and Maduras at Rs. 34.

Sugars and Cements were dull with the exception of Belapur Sugars. Belapurs rose straight on the announcement of a dividend of Rs. 9 plus a bonus of Rs. 3 per share, to Rs. 243-12, but closed at Rs. 237-8.

Planting.—This group was lifeless with sellers predominating in every scrip.

The miscellaneous section was dull with isolated deals reported in Burma Corporations at Rs. 8-4, Tata Iron and Steel Ordinary between Rs. 90 and Rs. 94 and the Deferreds around Rs. 400.

LONDON STOCK EXCHANGE

After the boom of last week Government securities were rather quiet in the Stock Exchange throughout the week under review. They were rather irregular and the price levels stood quite in contrast with those of last week. On Wednesday 2½ per cent. British consols were quoted at 90⅜, 3½ per cent. conversion at 109½, 4½ per cent. Funding Loan at 115¾, 3½ per cent. Loan at 107¼. Indian Loans were quoted higher on the same day. 3 per cent. Indian Stock was quoted at 88¼, 3½ per cent. at 97½ and 5 per cent. at 114¾.

Among other sections Tea and Rubbers were mostly steady. Tea shares received fair support and improved in prices on Tuesday. Oils also showed an improvement on the same day. Minings were mostly steady. Kaffirs declined in prices but Nandydroogs and Burma Corporations improved on Wednesday. Tobaccos declined. Industrials were well supported and in good demand for the most part of the week and on Wednesday were fairly steady but most price changes were downward.

NEW YORK STOCK EXCHANGE

Thursday Morning.

The market was steady. General business sentiment has improved. We hear that Internal Revenue Bureau is trying to take action on those companies which are allowing profits to accumulate beyond reasonable needs of business ; hence stocks, having accumulated surplus to avoid surtax, are likely to increase dividends. The companies with large surplus and current asset position like Chesapeake, Ohio, Dupont, General Foods, General Motors, Union Pacific, Standard Oil of New Jersey etc., may increase dividend rate.

American Telephone and Telegraph declared their regular quarterly dividend of 2¼ dollars per share ex-dividend on 13th December. Dupont declared dividend at 65 cents quarterly plus an extra dividend of 15 cents ex-dividend on the 27th November. General Motors declared the usual quarterly dividend of 25 cents payable on December 12.

COMPANY REPORTS

STANDARD JUTE CO., LTD.

The Directors beg to submit the audited accounts of the Company for the half-year ended 30th September, 1934, showing earnings on Revenue Account of Rs. 1,39,073-9-1 and a balance at credit of Profit and Loss Account of Rs. 2,69,733-12-1 which includes Rs. 1,04,000-13-0 brought forward from the last half-year.

The Directors propose to dispose of this as follows:

	Rs.	A.	P.
In paying a Dividend on the Preference shares at the rate of Rs. 6 per cent. per annum, free of Income-Tax ...	27,000	0	0
In paying a Dividend on the Ordinary shares at the rate of Rs. 10 per share, free of Income-Tax	1,40,000	0	0
In carrying forward	1,02,733	12	1
Total ...	2,69,733	12	1

The jute in stock has been taken at or under cost price and the manufactured goods at contract rates.

In accordance with agreements entered into by all Members of the Indian Jute Mills Association, the Mills have worked 40 hours per week during the period and 15 per cent. of the total looms have been shut down.

With effect from the 1st November, 1934, Mills in the Membership of the Indian Jute Mills Association will work 40 hours per week with 12½ per cent. of the total looms shut down.

During the half-year although world stocks of Hessians have been reduced, values have depreciated very considerably. This is not unhealthy as it may mean the retention of a larger proportion of the world's business by Calcutta Mills. Stocks of Heavy goods remain practically unchanged during the period under review, but show a large reduction in comparison with the position at the same time last year. Prices have appreciated to a small extent. The outstanding feature in Heavy Goods has been the satisfactory demand for Heavy Cees from Burma and the Far East: on the other hand business in Australian Cornsacks has been disappointing. Prospects for the current half-year are satisfactory, but for the future are obscure being still dependant upon world trading and political conditions, which remain uncertain factors.

The Government are now taking steps to bring about a voluntary restriction of the Jute Crop. This will be no easy matter but a really determined policy supported by the united backing of the educated and monied sections of the people is in our opinion capable of achieving good results. Excessive restrictions would have a bad influence upon the world consumption of jute, but in our opinion there is little danger of the price advancing too far owing to the large visible supplies of raw material and the inherent difficulties of voluntary restriction. The Company, therefore, will cordially support the policy of Government.

E. C. Benthall, Gobindlal Bangur, Chhajuram Chowdhry, W. M. Craddock, G. L. Scott—Directors.

Bird & Co.—Managing Agents.

AUCKLAND JUTE CO., LTD.

The Directors beg to submit herewith the audited accounts of the Company for the half-year ended 30th September, 1934, showing earnings on Revenue Account of Rs. 1,80,045-2-2 and a balance at credit of Profit and Loss Account of Rs. 2,22,227-10-6, which includes the sum of Rs. 42,975-14-10 brought forward from the last half-year. From this there has been written off for depreciation the sum of Rs. 25,000 leaving a balance of Rs. 1,97,227-10-6.

The Directors propose to dispose of this as follows:—

	Rs.	A.	P.
In paying a dividend on the Preference shares at the rate of 7 per cent. per annum, free of Income-Tax ...	35,000	0	0
In paying a dividend on the ordinary shares, of Rs. 6 per share free of Income-Tax	1,20,000	0	0

Prospects for the current half-year are satisfactory, but for the future are obscure being still dependant upon world trading and political conditions, which remain uncertain factors.

The Government are now taking steps to bring about a voluntary restriction of the Jute Crop. This will be no easy matter but a really determined policy supported by the united backing of the educated and monied sections of the people is in our opinion capable of achieving good results. Excessive restrictions would have a bad influence upon the world consumption of jute, but in our opinion there is little danger of the price advancing too far owing to the large visible supplies of raw material and the inherent difficulties of voluntary restriction. The Company, therefore, will cordially support the policy of Government.

E. C. Benthall, Badridas Goenka, Nanai Lall Jatia, W. M. Craddock, G. L. Scott—Directors.

Bird & Co.—Managing Agents.

LAWRENCE JUTE CO., LTD.

The Directors beg to submit the audited accounts of the Company, for the half-year ended 30th September, 1934, showing earnings on Revenue Account of Rs 1,78,916-0-3 and a balance at credit of Profit and Loss Account of Rs. 3,19,167-14-4 which includes Rs. 81,171-10-10 brought forward from the last half-year. From this there has been written off for Depreciation the sum of Rs. 25,000, having a balance of Rs. 2,94,167-14-4.

The Directors propose to dispose of this as follows:—

	Rs.	A.	P.
In paying a dividend on the Preference shares at the rate of Rs. 7 per cent. per annum, free of Income-Tax ...	52,500	0	0
In paying a Dividend on the Ordinary shares of Rs. 15 per share, free of Income-Tax	1,50,000	0	0
In carrying forward	91,667	14	4
Total ...	2,94,167	14	4

The jute in stock has been taken at or under cost price and the manufactured goods at contract rates.

In accordance with agreements entered into by all Members of the Indian Jute Mills Association, the Mills have worked 40 hours per week during the period and 15 per cent. of the total looms have been shut down.

With effect from the 1st November, 1934, Mills in the Membership of the Indian Jute Mills Association will work 40 hours per week with 12½ per cent. of the total looms shut down.

During the half-year although world stocks of Hessians have been reduced, values have depreciated very considerably. This is not unhealthy as it may mean the retention of a larger proportion of the world's business by Calcutta Mills. Stocks of Heavy goods remain practically unchanged during the period under review, but show a large reduction in comparison with the position at the same time last year. Prices have appreciated to a small extent. The outstanding feature in Heavy Goods has been the satisfactory demand for Heavy Cees from Burma and the Far East: on the other hand business in Australian Cornsacks has been disappointing. Prospects for the current half-year are satisfactory, but for the future are obscure being still dependant upon world trading and political conditions, which remain uncertain factors.

The Government are now taking steps to bring about a voluntary restriction of the Jute Crop. This will be no easy matter but a really determined policy supported by the united backing of the educated and monied sections of the people is in our opinion capable of achieving good results. Excessive restrictions would have a bad influence upon the world consumption of jute, but in our opinion there is little danger of the price advancing too far owing to the large visible supplies of raw material and the inherent difficulties of voluntary restriction. The Company, therefore, will cordially support the policy of Government.

WORLD OF INDIAN FINANCE

Calcutta, Novr. 30.

There is little or no change in the position of the money and exchange markets to record in this week's review. It has been in the main a replica of last week with money in the same glutted condition and exchange as dull as ever. Even at the rate of ¾ per cent. borrowers are hard to find, the only outlet for the surplus funds, in addition to the usual Treasury Bills the jute shares, seems now to be which are experiencing a virtual boom during the last fortnight; and this emphasises the fact that in November it is futile to expect any marked increase in trade demand. It also lends point to the suggestion we made in these columns last week, that there is within the usual busy season a slack period in which conditions are quiescent, making neither for progress nor any serious setback. The same conditions were experienced last year also, except that on that occasion the Government were endeavouring to create a somewhat artificial stringency in the money market. The changes of stock speculation taking the place of a genuine trade demand and contributing to a comparative stringency of money conditions, cannot be exaggerated. The passing of this phase of easy money would depend rather on the restoration of the Treasury Bills position to the normal and the disappearance of the excesses now created by a heavy maturity of Treasury Bills.

We are, indeed, well on the way to a readjustment of the incomings and outgoings of the Treasury. In estimating the position of the money market and the immediate prospects, it is necessary to remember that the market's sales of sterling to the Government during the last few weeks have been on a substantially lower scale than usual. The excess of funds in the market has reacted on the market's sales of sterling to the Government; and except in the week ending November 3, Government's purchases of sterling have never touched the level of £1 million. That there have been sales of sterling to the Government, in spite of the very easy conditions ruling in the money market, may be attributed to the continuance of the inflow of foreign money into India for the purpose of investment in Treasuries. Nevertheless, it is noteworthy that the influx of money from the Treasury into the market, on account of the former's purchases of sterling, is not very heavy.

The prime factor, therefore, in the position of the money market is the Treasury Bills policy of Government and the rate at which recent payments on account of excess of maturities are absorbed again by the Treasury. Our Treasury Bills Statistics will show that the period of heavy excess of maturities over sales have been very nearly left behind. During the middle of November the market had over Rs. 4½ crores of excess of maturities over sales, with the result that the total amount of Treasury Bills outstanding fell from Rs. 35.51 crores in the first week of November, to Rs. 30.82 crores in the third week. This fall has been arrested and the amount of Treasury Bills outstandings on November 27 may be roughly put at a little over Rs. 31 crores. As pointed out on an earlier occasion, the period of maturities is over with the end of November. The resultant position is that, while Government will not have to make any large payments to the market on account of Treasury Bills, the market will be feeling the weight of the excess payments made in November; and the first half of December will naturally see a weekly rise in the total amount of Treasury Bills outstandings.

The signs of such a tendency are already visible. In the week ending November 27 total sales of Treasuries amounted to Rs. 329.25 lakhs while maturities came to only Rs. 302 lakhs. The result is an excess of sales over maturities of Rs. 27.25 lakhs, as against an excess of maturities over sales of Rs. 104½ lakhs in the week ending November 20, and Rs. 3,64¾ lakhs in the week ending November 13. That the market must continue to tender heavily for Treasuries on the auction day and buy bills on tap for large amounts, is also seen in the fact that the applications on Tuesday last amounted to Rs. 311 lakhs which compares not very unfavourably with Rs. 374 lakhs last week. Sales of intermediates between November 21 and 26 were also well maintained at Rs. 179¼ lakhs. The steadiness of the average rate of accepted tenders at Rs. 1-7 per cent. will also have the effect of convincing the market that, far from there being better rates in store for it, there is, perhaps, the danger of a slight decline. And

the market would thus be persuaded to hasten the process of investing its funds in Treasury Bills.

Government securities had lapsed in the earlier part of the week into a quiet phase lacking in improvement in prices and in activity. The reason for this is to be found in the conditions ruling in the London market. London advices have not been very strong during the greater part of the week. 3½ per cent. sterling was quoted at £96½ up to Thursday. It is believed that London has had a faint disillusionment about the budget prospects in Britain and that such disillusionment has acted as a brake on the progress of the giltedge market. It may well be guessed that the disillusionment is due rather to the unduly exaggerated hopes of an earlier period than to any deterioration.

In this connection, we may draw attention to this week's instalment of Clive Street Gossip which Eavesdropper has sent from London by Air Mail. Apart from the intrinsic factors in the position of the credit of the British Government and the world of trade and finance, the one thing that matters most to the prospects of giltedge is whether or not the British Government are actually behind the rise in giltedge prices and whether investors can rely on the Government exerting their influence towards a further lowering of yields on giltedge. At the time the first big rise occured in giltedge, it was widely suggested that the British Government had actually engineered the whole position and brought about such money conditions as would be conducive to a rise in giltedge prices. There was not at that time the means of making a judgment on this question. But when London papers are unanimous that the Treasury had shown its power of control over the market in a manner that few could have suspected previously, there is no reason to regard that report with any incredulity. If then, the British Government had been working for a higher level of giltedge prices it may be asked what is their motive. It used to be presumed formerly that the British Government had completed the conversion programme which began in and about the middle of 1932 and which achieved its most sensational success in the conversion of the £2,000 million of war loan and that the Treasury had no further interest in the lowering of yields on giltedge. It might well be that, as the position stood some months ago, the British Treasury did not long for further savings in interest charges. But now that the conditions are well set for another flight of giltedge prices, the Government can well explore the possibility of further savings in interest charges. Eavesdropper has attempted to demonstrate the very solid interest which the British Treasury has in a higher level of giltedge prices. The knowledge that the Government have substantial interest to derive from an improvement in giltedge prices together with an appreciation of the intrinsically sound position of British credit, must tend to shorten the present phase of quietness in the giltedge market in London and enable it again to lend strength to giltedge in India. In fact, 3½ per cent. Sterling is reported to have risen to £97 today; and on the strength of such London advices 3½ per cent. Paper was ruling strong in Bombay at Rs. 95. Our Bombay correspondent reports that the belief in 3½ per cent. being bound for par is widespread in Bombay. Conditions in Calcutta have been distinctly better. Trading in 3½ per cent. to-day has been done far over the level of Rs. 95, some deals being recorded at the rate of Rs. 95-15.

The exchange market has continued dull and the conditions of the week have been, if anything, duller. The usual movement of London funds for investment in Treasuries is going on and accounts for some amount of business. Gold exports have improved, last week's shipments from Bombay amounting to Rs. 1,49,07,815.

On November 28, tenders to the amount of £50,000 at 1s. 6 1/16d., were received and allotted in full.

The closing rates are: 1s. 6 1/32d., T.T. for November-February with 1s. 6 3/64d., available for interbank November-December and possibly January T.T. 1s. 6d., to 1s. 6 1/64d., March-April T.T. and 1s. 6d., May-June T.T.

Bills were quoted 1s. 6 1/8d., November-February and 1s. 6 3/32d., from March onwards.

Money was easy during the week call money quoting ¾ per cent. Onemonth deposits quoted 1 per cent. and twomonth and threemonth deposits 1¼ per cent.

PRUDENCE RUN AMOK

A point of some interest to the financial policy of companies was raised by our New York Correspondent in his report on the Stock Exchange, which appeared in our *Investor's Supplement* of last week. It was pointed out that "the Internal Revenue Bureau is trying to take action on those companies which are allowing profits to accumulate beyond reasonable needs of business." Though action in this instance is inspired by the desire to prevent evasion of income-tax, there are other principles involved. The action of the Revenue Bureau is an authoritative protest against the habit of certain companies to keep in their reserves amounts which ought to go to the shareholders in the shape of dividends. This habit, sometimes due to the desire to avoid taxes, is more often due to an unduly conservative policy. In India, there are numerous instances of companies which virtually deprive present shareholders of their legitimate profits by maintaining low dividends and preventing the rise in the market value of the shares. The jute companies are, as a rule, notable sinners in this respect. But even more glaring instances are afforded by the sugar companies, like Ryam, Cawnpore, and Champaran, who have written down their block accounts to a fraction of their real value and have acumulated reserves and liquid assets actually in excess of their capital. The suggestion, that these companies can utilise profits better than their legitimate owners, is too ludicrous to be a defence of this policy. And the effects of this policy, when widely followed, in limiting purchasing power and prolonging the shrinkage of consumptive demand and thus perpetuating the depression are too obvious to need explanation. Here, as in most other respects of progressive economic policy, America has shown the way. Will India follow?

Thursday Evening.

The international exchanges have for the time being ceased to be the centre of interest in international finance. There is a certain amount of steadiness both in the sterling-dollar and in the sterling-franc rates. For over a fortnight the sterling-dollar rate has kept slightly under the level of five dollars to the pound. It has never even touched the level of five dollars since November 8, nor has it gone much lower than 4.99. The same may be said of the sterling-franc rate, which has shown a slightly downward tendency ; but even here the steadiness is very marked. It may be supposed that there is a lull in the principal factors making for unsettlement in the international exchanges. The news that the United States have begun to feel, to some extent, a commonness of purpose with the Gold Bloc countries, has made a great deal of difference in the outlook of the European currencies. The bear attacks on the Belga have abated. Likewise, in France, the establishment of M. Flandin's Cabinet and the assurance that there is no change of financial policy have conveyed a reassurance to the markets. So far as Britain is concerned, the present steadiness of the sterling-franc rate and the sterling-dollar rate is more than she had reason to expect sometime ago. America has still a somewhat pliant monetary policy, but no large scale surprises are now in store. In the light of these factors the steadiness is quite understandable.

Gold Reserves in France.

The only source of disquiet is the continued diminution in the gold reserve of the Bank of France. For weeks, the Bank of France has suffered a diminution of the gold reserve and in its earlier stages a fall in the ratio of gold reserve to liabilities, but this has been avoided by a reduction in the latter. The Bank of France suffered a further diminution of 94 million francs in the week ending November 22, as compared with the figures for the week ending November 15, and this time the Bank of France had actually effected an increase in the ratio from 80.46 to 80.74 on account of the reduction in the note circulation. Bearing in mind the paramount need of deflation for bringing about an adjustment of internal or external prices, one is tempted to wonder whether France has started in earnest the policy of effecting a further deflation of currency. It is obviously too early to rush to any conclusions on this matter, but the suggestiveness of the figures available at the moment of writing might profitably be noted.

2¾ per cent. Issue in London.

While France is engaged, according to our hypothesis, in an incipient deflationary policy, England has started to reap in full the benefits of the policies which the abandonment of the gold standard has rendered possible. It is a matter of common knowledge that the national budget of Great Britain benefitted to no small extent from the inflationary policy pursued in the wake of the abandonment of the gold standard in September, 1931. Since then the moderateness of trade revival has accentuated the excess of funds. The deeper currents of international finance and trade have combined to work to its logical conclusion the present position in regard to money and interest rates. The recent rise in the price of giltedge securities and the breakdown in the Clearing Banks' agreement, which brought about that development, have made it clear that we are not far from the level of 2½ per cent., which Mr. Keynes foresaw with prophetic insight months ago. Once the pressure of events and the recognition of facts have brought giltedge prices to the level at which the yield is less than 3 per cent., it is only natural that new capital issues should be made on no higher rates of yield. It is, in this view, significant that the first loan on a 2¾ per cent. basis was issued in London on November 24. It is an issue of £5 million, Birmingham Corporation stock, redeemable in 1955-57, the issue price being 96½. It is stated that the proceeds are to be utilised up to £4 million in the repayment of existing mortgages, the balance being required for electricity and other developments. The reports make it clear that there has been little or no difficulty in getting such a loan underwritten. At the issue price of 96½ the new loan gives a current yield of 2.5 per cent. and the redemption yield, on the assumption that the stock is redeemed in the last year in which option remains, works out to 2.90 per cent. Thus it will be seen that both the current and the bond yields are well below the level of 3 per cent. From the present condition of the London money market, there is little reason to doubt that the new loan will meet with a good reception. The success of a 2¾ per cent. issue will undoubtedly mark an advanced stage in the downward trend of interest rates. Here, too, one is tempted to believe that the Municipal loan referred to above is intended by the authorities to pave the way for a 2½ per cent. loan early in 1935. When, at the time of the rise in giltedge prices a fortnight ago, it was suggested that one of the reasons behind it was the intention of the British Government to put their credit on a 2½ per cent. basis, the report met with a somewhat silent scepticism. Such scepticism will now be dispelled, when one of the Municipal authorities is able to raise the money at appreciably less than 3 per cent. One might watch the price of this security after it has been issued to and taken up by the public.

Silver from Shanghai.

An interesting item of news since these columns were last written is the one concerning the shipment of silver dollars from Shanghai to other parts of China. We are told that such shipments cannot be made except with a permit from the Ministry of Finance. One would naturally think that the aim of the Ministry is to conserve the stocks of silver in this important trading centre of China, but the officials seem to have heard that the new regulation insisting on a permit from the Ministry of Finance will, in no way, interfere with the normal movement of trade and it is aimed solely at preventing silver from leaving Shanghai for smuggling purposes. The interest of this item of news lies in the suggestion that, consequent on the imposition of a high export duty, a fillip has been given to the smuggling of silver and that special measures are called for to prevent such smuggling. The high level of the export duty offers a specially large inducement to those who are prepared to engage in this nefarious trade. But such unlawful activities have been less uncommon in China than in most countries of the world. And it was pointed out in *Indian Finance* at the time the question of the Chinese silver policy was considered by us, that the only factor, which could to some extent link the Chinese currency with silver, is the possibility of smuggling. But it was clear from the fall in the tael, which was even greater than the fall in the price of silver, that smuggling could never be a substitute for free export of the metal. That the Chinese Government is compelled to tighten up the control over the influx of silver from China through unlawful means, makes it clear that China does not mean to keep any manner of organic relation between her currency and the price of silver in the world markets.

PUBLICATIONS OF THE LEAGUE OF NATIONS

JUST OUT; "STATISTICAL YEAR-BOOK OF THE LEAGUE OF NATIONS" 1933-34

270 pages ... ... in wrappers Rs. 6 14 0
in cloth Rs. 8 8 0

This is the most complete and authoritative international compilation of official statistics regarding the economic, financial and social activities and the population of all the countries of the world.

These statistics including Vital Statistics, Labour Conditions, Production, International Trade and Balances of Payments, Transport, Public Finance, Monetary and Banking Statistics, Prices, Conversion coefficients for weights, measures and currencies, have been brought up to the end of 1933 or the beginning of 1934 and have been reduced, whenever desirable, to a common measure.

The present edition marks an improvement on its predecessor in the abundance of its information on various matters of great topical interest, such as public finance and the distribution of population by age, groups and occupations, etc. Another new feature consists of the tables on the production and use of nitrogen and of index-numbers of employment.

"REVIEW OF WORLD TRADE", 1933

A presentation and analysis of world trade in 1933 — about 60 pages ... ... Price Rs. 1 12 0

This volume compares the trade of the world of continental groups and of individual countries in 1933 and in recent years. It shows the contribution of each country to the total, the changes in the direction of trade and in the relative importance of the groups of commodities of which it is composed. The analysis demonstrates that, while the value of trade diminished again in 1933, the quantum increased, mainly owing to the larger exports of raw materials; exports of manufactured products were, however, also slightly higher than in 1932. Special attention is devoted to the trade in the most important crude materials and foodstuffs. An annex contains revised indices of the prices and quantum of the trade of individual countries.

Complete catalogue sent free on application.

TREASURY BILLS.

The Controller of the Currency notifies that tenders for Rs. 1½ crores of three months' Treasury Bills were opened on Tuesday, November 27. The total amount offered was Rs. 3,11,00,000. Tenders at Rs. 99-10-6 were accepted in full and those at Rs. 99-10-3 were allotted approximately 48 per cent. Lower tenders were rejected. The total amount accepted was Rs. 1½ crores, the average rate of accepted tenders being Re. 1-7-0 per annum.

Tenders for Rs. 1½ crores of three months' Treasury Bills will be received on Tuesday, December 4. Successful tenderers should make payment on Friday, December 7. Other conditions are as usual.

Three months' intermediates will be sold from November 28 to December 3 at Rs. 99-10-9 per cent. subject to the conditions previously announced.

Three months' intermediates sold from November 21 to 26 amounted to Rs. 1,79,25,000.

STERLING TENDERS.

The Controller of the Currency notifies that on Wednesday, November 28 tenders to the amount of £50,000 at 1s. 6 1/16d. were received and allotted in full.

£1 million will be offered for tender on Wednesday, December 5 on the same conditions as previously announced.

SUGAR PRODUCTION IN JEOPARDY

The Indian Sugar Industry has in a recent memorandum to the Finance Member and the Commerce Member of the Government of India set out a conclusive case for increasing the duty on imports of sugar into India. For the industry has naturally noted, and assessed the full significance of, the rapid and steady decrease in the prices at which Java Sugar is being offered in the Indian market. When the whole scheme of import and excise duties and the balance of protection to the indigenous industry is designed on the assumption of a certain level of prices in the imported commodity, it is obvious that any fall in price below that level must end in upsetting the whole scheme. During recent months the price of Java sugar has been steadily going down below the level assumed in the report of the Tariff Board. At the same time, the imports of Java sugar have steadily gone up. And when it is remembered that the Indian sugar industry is generally believed to be on the verge of over-production with a pronounced excess of supply over demand in particular areas, the danger to the industry contained in the present movement, of foreign exports may be easily imagined.

* * *

That the present movement, if left unchecked, would disorganise the internal sugar market and throw into confusion the affairs of the newly established sugar mills, there can be no doubt. For the Indian sugar industry had only lately become aware of the danger which the overproduction of areas like the United Province and Bihar portends to the whole of the Indian industry. Only a few months ago, the representatives of the greater part of the sugar mills of India met in Calcutta to consider the ways and means by which the depressing effect of comparative over-production in Bihar and the United Provinces can be overcome. And it was decided that the excess of supply over demand in these areas, which was estimated at about 30 per cent., was to be taken away to the areas served by the ports and sold through special organisations at rates which will compare favourably with the prices of the imported commodity. The sugar manufacturers also agreed that a more comprehensive scheme of marketing of sugar through a special Sugar Marketing Board, if feasible, would be greatly to the benefit of the industry as a whole. There is every reason to think that the sugar industry has been actively considering this question during the months that have elapsed. And there is no doubt that, if Bihar and the U. P. were relieved of their excess production, the general range of sugar prices in up-country areas would rise to fairly remunerative levels. Foreign interests apparently have followed the developments in the Indian sugar industry and have attempted to forestall the formation of the Sugar Marketing Board and its activities by increasing their imports into this country. It is obvious that large stocks of foreign sugar in the principal port areas would not only be disconcerting to the Sugar Marketing Board, but would actually nullify its efforts to dispose of the Indian product in those areas at anything like an economic price.

* * *

The figures of imports of sugar during the last few months show clearly that the increase is not a mere accident or the result of an automatic recovery of consumptive demand in this country. The following table gives the imports of sugar into India at during the period since March last:—

	All Sugar (tons)		Java Sugar (tons)	
	1934	1933	1934	1933
April ...	11,765	32,955	11,288	26,116
May ...	17,069	19,951	13,018	15,766
June ...	21,273	20,318	13,015	15,678
July ...	21,183	25,657	12,196	20,802
August ...	19,577	23,255	15,561	17,680
September ...	28,763	21,649	25,808	15,973
October ...	27,430	21,107	22,605	11,945
Total ...	147,060	164,892	113,491	123,960

* * *

The industry has exaggerated the extent to which the imports of Java sugar into this country have increased during the last seven months as compared with the corresponding period last year ; for the progressive total shows only a decrease. But it is not without significance that during this period of seven months the imports have been increasing from month to month with a big leap forward in the month of September. And if imports increase at the present rate, they will form a dangerous addition to the production of sugar of the indigenous mills. It must be borne in mind in this connection that the total production in India has been steadily increasing owing to the establishment of new factories and the expansion of the old ones. The following table shows the production of Indian factories as estimated by the Sugar Technologist.

Year	Factory Sugar (tons)	Khandsari Sugar (tons)	Total (tons)
1931-32 ...	2,28,000	2,50,000	4,78,000
1932-33 ...	5,54,000	2,25,000	7,79,000
*1933-34 ...	5,34,000	2,25,000	7,59,000
1934-35 (Estimd.) ...	6,87,000	2,00,000	8,87,000
1935-36 ,, ...	8,07,000	2,00,000	10,07,000

* Reduction due to Earthquake.

* * *

Taking these figures in conjunction with the state of consumptive demand, it is possible to suggest that in another year or two the internal production will be just equal to the total demand and that in the third year India will have a surplus of about 200,000 tons available for export. In such a position, the increase in exports referred to above cannot be construed by any means to be to the good of the industry or trade in India.

* * *

But it may be conceded that, barring quotas which involve a tangle of conflicts with foreign nations, there is no means of exactly regulating the flow of imports. But an industry which is in enjoyment of substantive production is entitled to demand that import duties are at such a level as would assure the industry of a certain minimum margin of protection. The level of import duties on a commodity, which is also produced by a protected industry at home, must necessarily be governed by the prices at which imports are offered in the market. And it is, therefore, necessary to note the rapid fall in the price of sugar during the last one year and

more. The following table gives the prices of sugar at various dates from the middle of 1931:—

Date	Ex-Java Ware-houses. Guilders per 100 Kilos.
7- 7-1931	8.37
21- 7-1931	8.50
6-10-1931	7.75
20-10-1931	7.50
2- 1-1932	6.62
19- 1-1932	6.75
5- 4-1932	6.37
19- 4-1932	6.37
5- 7-1932	6.12
19- 7-1932	6.10
4-10-1932	6.10
18-10-1932	6.10
3- 1-1933	5.25
24- 1-1933	5.25
4- 4-1933	6.00
18- 4-1933	6.00
5- 7-1933	6.00
18- 7-1933	5.75
3-10-1933	4.75
24-10-1933	4.50
2- 1-1934	4.20
23- 1-1934	4.00
3- 4-1934	4.10
17- 4-1934	4.00
2- 7-1934	3.60
24- 7-1934	3.60
2-10-1934	3.25
21-10-1934	3.25
13-11-1934	3.00

* * *

In India the C. I. F. Calcutta price has gone down to 5sh. 4 d. per cwt. corresponding to about Rs. 2-9-3 per md. and the C. I. F. Bombay price has gone even lower to Rs. 2-7-8 per md. The Tariff Board, it will be remembered, made their recommendation about the import duty on the assumption that the price of Java sugar in Calcutta would be Rs. 4 without duty. And it is an essntial part of any scheme of protection that any fall in the price of the imported commodity below the level assumed in the report should be made up by a corresponding increase in the import duty. For, otherwise the fall in the price of imported commodity reduces the level of protection to the indigenous industry and minimises the security, considered so essential for the conservation and consolidation of the national enterprises. In the pre-depression days lightning changes in price policies were comparatively rare. And this principle, though well understood, was never insisted on. But in most recent reports of the Tariff Board, the Board has naturally emphasised the importance of Government taking powers to ensure that the scheme of protection to the indigenous industry should not be nullified by the price policies of their foreign competitors. With the growth of dumping in international trade, Governments all the world over are arming themselves with powers to meet contingencies of this kind. In India, the Anti-Dumping Bill has conferred similar powers on the Governmnt of India which are, no doubt, rarely exercised but which, nevertheless are a recognition of this principle. And in the case of the sugar industry, the Government have only recently signified their acceptance of the principle by reducing the excise duty on sugar by ten annas as compared with the level originally proposed, in consideration of the fact that the price of Java sugar had gone down to Rs. 3-6-0 per md. as compared with Rs. 4 assumed by the Tariff Board. As pointed out earlier, Java Sugar prices have gone down by about 13 annas per maund. And if the industry is to enjoy the same amount of protection, the difference between the present level of prices and that assumed by the Tariff Board and the Government of India at the time the recommendations of the Board were accepted by the Government, then it is obviously necessary that the import duty on sugar should be increased by about Re. 1 per md. corresponding to about Rs. 1-6-0 per cwt.

* * *

The obligations of the Government to effect such an increase and comply with the demands of the Indian sugar industry are varied and irrefutable. In the first place, the sugar industry has come into existence on the definite promise of the Government of India that it will be afforded the necessary protection. As a protected industry, it is barely three years old. All the arguments which are adduced generally in favour of an infant industry are applicable to Indian sugar in full. No one can possibly contend that a big staple industry can within three years organise itself and gain a footing from which it can offer free competition to its rivals from abroad. Whatever may be the price which the consumer pays, it cannot be said that the sugar industry has had its full trial and that the time is come when it should stand or fall on its own merits. There is one peculiar circumstance in the case of the sugar industry which enhances the obligation of the Government to come to its succour when its future appears to be jeopardised. For the Indian sugar industry was ushered into existence not only by according the measure of protection recommended by the Tariff Board, but also by the imposition of the surcharge which increased the protection and brought about a larger expansion of the industry than would otherwise have been possible. It is true that at the time the surcharge was imposed, it was made abundantly clear that the industry was not entitled to expect its indefinite continuance. And acting on the strength of this warning the Government scrapped in March last the extra-production by the imposition of an excise duty, which is roughly equal to that surcharge. This is only understandable. But if the Government were to change within a few months from excessive protection to a cruel indifference, they would be guilty of playing pranks with the fortunes of a staple industry. While they may justly refuse to continue the additional protection contained in the surcharge, they must also recognise that the removal of such surcharge increases their obligation to

watch the fortunes of the protected industry. Thirdly, the Government have started since March last to derive a considerable amount of revenue from the sugar industry. A duty on production is admittedly a crude instrument of taxation ; and if, owing to particular circumstances, a government feels obliged to derive revenue in this questionable manner, it must recognise a corresponding obligation to maintain this source of income. If in the face of the successive reductions in the price of Java sugar, the Government declined to interfere in the interests of the sugar industry, their action would be a unique instance of blowing hot and cold, of pampering the industry with excessive protection at one time and then growing lukewarm suddenly and ending finally with a callous indifference. We have no doubt that, if the Indian sugar mills were to close down for reasons which the Government could well help, without departing from accepted principles of fiscal policy, it would be a serious setback to the growth of the investment habit in this country and of industrialisation in general.

BRITISH STEEL AND THE INDIAN MARKET

From Britain comes the news of a virtual boom in the steel industry and trade. It is now estimated that Britain's steel output for 1934 will very nearly approach the 1929 record and will be markedly in excess of the pre-war record of 1913. The increase in the output of British steel industry has been occurring over the last three years. The lowest point was touched in 1931 when the output was only 5,200,000 tons as compared with the record figure of 9,655,000 tons in 1929. But 1932 showed a slight rise to 5,261,400 tons and the improvement was even more marked in 1933 at 7,002,800 tons and the estimated production for 1934 is 9,300,000 tons. The pace of the movement towards higher production can be better understood if it is added that the output of the 12 months ended June 1934 amounted to 8,327,300 tons.

* * *

It should normally be difficult to understand how, when the depression is still largely with us, the production of British steel alone could amount to unprecedented heights. For the factors that still operate against a rise in steel production are many and strong. The principal outlets for British steel are merchant shipbuilding, naval shipbuilding and the great export markets. The demand for steel on account of merchant shipbuilding is barely a third of the pre-war normal. Naval shipbuilding has not increased its offtake of steel to more than half the pre-war level and this in spite of the fact that the nations are not half as pacifist as in the years immediately following the war. The exports of British steel are down by 60 per cent., as compared with the level of the 1907-13 annual average because foreign embargoes and the difficulty of finding payments on account of low exports and exchange restrictions continue to be as effective as ever.

* * *

The position of Britain cannot be considered to be very much different from that of other steel-producing countries. In America the output is about 22 per cent. of capacity and above half the rate of 1913. Germany produces a third of the steel she used to produce before the War. France, Belgium and Russia are producing more ; but total world production is still lagging far behind the pre-War level.

* * *

And we have it on the authority of the Board of Trade that the saturation point has been very nearly reached in the home market. In the light of these facts, the revival in the British steel industry can be explained only in terms of factors which gain their importance only on a long view. It is, indeed, superfluous to indicate the scope for increased consumption of steel. From the earliest times the expansion of steel has been mainly at the expense of timber. And latterly steel has been increasingly ousting not only wood, but stone and brick from many lines of construction. The advantages which steel possesses over timber has had a great deal to do with the preference for steel. And since the War the price of timber is higher compared to steel. And there is little chance of timber growing more economic, as the world's supply is by no means carefully replenished, while forests are being sacrificed for the sake of timber. By far the most important advantage of steel lies in the fact that it can be made to suit different requirements, while the quality of timber depends more or less wholly on nature. The increasing susceptibility of modern shipping to fire, through the greater use of oil and electricity, clearly points to steel being a more suitable material for ships than timber. Of the great transport industries, the railways have also taken to increasing their requirements of steel. All steel coaches and steel sleepers are being favoured ; and the apprehensions of increasing noise, which were formerly entertained, are being gradually dispensed with. Steel is now taking a bigger place in home and office. Furniture for office, home and hotel is being made of steel which is so treated to look hardly different from the best polished wood. Brick and mortar are almost completely eliminated from engineering work. In fact, old bridges are being demolished in order that all steel structures might be raised. There is thus a great deal of truth in Sir William Larke's statement that "the steel age has just begun."

In view of this development it is understandable that a far-seeing steel industry should attempt to increase its production during a period of low prices, but it would be realised that if this is the sole factor governing the output of steel, it is common to all the steel-producing countries of the world, and that the fact that the movement towards higher production is

confined to Britain, will have to be explained by special causes.

* * *

The one special factor in the case of Britain operating towards an increase in the output of the British Steel Industry, is the consciousness that the great Indian market has been thrown open for Britain alone of all foreigners. For, according to Mr. Runciman, the Home market has reached the saturation point, naval and merchant shipping is not likely to increase its offtake of steel for some long time to come, though it is conceivable that the building programme of the British Navy might be increased, it cannot be such as to warrant the increases that are being effected in the output of the British Steel Industry. And the only other outlet, namely, the export markets have neither increased their capacity to buy British steel nor have they prepared the ground for an automatic growth of demand by a removal of the artificial restrictions. It is obvious that in the talk of export markets we are not having India in mind. If there were a general improvement of the conditions in the country all the steel producing countries in the world would have expanded their production. In the absence of any such condition common to all the consuming countries, and considering also the fact that the Home market has reached the saturation point, one is led to the conclusion that the possibilities of the Indian market have no small place in the programmes of the British Steel Industry. And this is nothing surprising as India has only recently enacted a measure allowing free entry for many lines of steel products of British manufacture, and it is well-known how the leaders of the British Steel Industry were aware for a long time hence that such preference for British Steel would be forthcoming. It is a pity that while foreign manufacturers can expand their production on the assumption of better demand in this country, the indigenous industry should have so little reason to hope for an increased share of the Home market.

WORLD PRODUCTION AND PRICES

New Economic Order

The report on "World Production and Prices 1925—33" of the Economic Intelligence Service of the League of Nations is a valuable contribution to current economic survey. The collection and presentation of international data in the Report give a precise perspective of world economic movements. Agriculture continues to be at a disadvantage as against industry, except, where as in the case of the United States, special factors have intervened. Agricultural production is practically on the level of 1928, while world population increased at the rate of one and half per cent. per annum. In the period covered by the Report international trade in foodstuffs declined by 16 per cent. Though the discrepancy between prices of raw material and finished products, which is a prominent feature of the depression, is now slightly less marked, purchasing power of raw material over manufactured goods remained a quarter to a third less at the beginning of 1929. In contrast with the Gold Bloc, countries on fluctuating currencies register the initial signs of recovery.

* * *

Improvement in agricultural prices are shown in the Report in respect of the following countries:

	January 1933 to January 1934	January 1929 to January 1934
United States	+38	−45
Canada	+27	−42
Argentine	+23	−39
New Zealand ...	+20	−40
Germany	+15	−29
Greece	+10	...
United Kingdom ...	+ 7	−21

On the other hand, in the following countries agricultural prices fell steeply:—

	January 1933 to January 1934	January 1929 to January 1934
Norway	− 3	−29
Italy	− 8	−46
Poland	−10	−49
Roumania	−13	−37
Hungary	−22	−58

The Report points out that the terms of trade between certain agricultural and industrial areas reflect the readjustment in price relationships—that is, in some of the agricultural countries larger imports were

received in exchange for a given quantity of exports. The modification of this disparity does not, the Report stresses, warrant the expectation that the pre-1929 normal relationship between agricultural and industrial countries will be restored. Rather do recent trade movements suggest that a new economic order operating to the disadvantage of agricultural countries will be a permanent legacy of the depression. The trend of production and trade is indicated below:—

Indices of the quantum of world trade.

Foodstuff	100	91	83.5
Raw Materials	100	80	86.5
Manufactured articles ...	100	58	59

Indices of world production.

Crude foodstuff	100	101	100
Raw materials	100	73	79
Manufacturing and mining ...	100	68.5	77

* * *

Following the policy of economic nationalism pursued by the principal industrial countries, the relative position of export industries have deteriorated everywhere and the recovery is confined to home markets, except in Japan. Industrial activity which had contracted by 37 per cent. between 1929 and 1932 expanded by 14 per cent. in 1933. The rate of progress was much slower in the production of industrial raw materials which rose by 9 per cent.—the increase being much greater in non-agricultural raw materials (12 per cent.) than those of agricultural origin (4 per cent.). Raw material and non-agricultural raw material production were 12 per cent. and 18 per cent. below the average of 1925-29.

* * *

The Report fixes, as the most hopeful sign, on the fact that up to the first quarter of 1934, the output of investment of goods recovered at a considerably more rapid rate than that of consumption goods, except in the gold standard countries where the revival of real investment activity has lagged behind current consumption. The broad results of price movements and their discrepancies are summarised as "Some of the major discrepancies in the price structure which had developed in the course of the depression were mitigated during 1933 ; the terms of exchange between raw materials and manufactured goods improved in favour of the former ; agricultural products rose on the whole more than industrial products, except in the agricultural exporting countries of South-Eastern Europe ; consumption goods improved in value in terms of investment goods ; retail prices rose considerably less than wholesale prices ; rents in many countries declined more than they had done in previous years."

DOCK LABOUR

Strikes have become frequent in spite of their obvious re-actions on employer, employee and business. And as a rule, they develop an intransigence in both parties which render agreed settlement more difficult. The strike at the Kidderpore Docks is a case in point. Whatever, if anything, transpired before the strike is not known to the public and no authentic statement has yet been made either by the strikers or their employers. The position seems to be that Dock Labour which loads and unloads cargo is dissatisfied with present conditions of work and with the scale of payment. A gang of eight men and a Sardar receive Rs. 12/8/- a day and the men work, it is said, eleven hours at a stretch. The work is arduous and hazardous and the Whitley Commission have placed it on record that dock labour is about the poorest paid in India, the average monthly earnings being about Rs. 20, after deductions by way of Sardar's commission and middlemen's takings. With trade depression, this income has shrunk and employment is irregular. The strikers' case is for an increase from Rs. 12/8/0 to Rs. 16/8/- a day and for eight working hours. They allege that the present scale of payment and the eleven hours shift have not altered since 1928.

* * *

The absence of a reasoned statement by the other party gives rise naturally to inconsiderate conclusions in interested circles. Silence does not help to clarify the issues and may warrant the assumption that the employers' case will not bear examination. What is regrettable is that no attempt seems to have been made to come to an agreement. On the facts, as far as the public knows them, a settlement, if approached in the right spirit, would not be difficult. In these days of distress small wage earners are not to be stampeded into a strike. The dockers at Kidderpore are unorganised, in the strike sense, and docile as far as the public is aware. And we are not inclined to credit the allegations of Communist influences that are in strike trouble usually made : there are legitimate labour disabilities which call for redress. What has introduced an element of aggravation is the employment of Anglo-Indians and Chinese in place of the strikers who comprise both workers and Sardars. A well-known firm of shippers is, it is said, recruiting non-Indian labour to replace Indian labour at the Docks. Shipping cannot be held up by a strike and any temporary measures taken to deal with an emergency are justifiable. But to deliberately deprive labour of a scanty living as a retaliatory measure cannot enlist public sympathy.

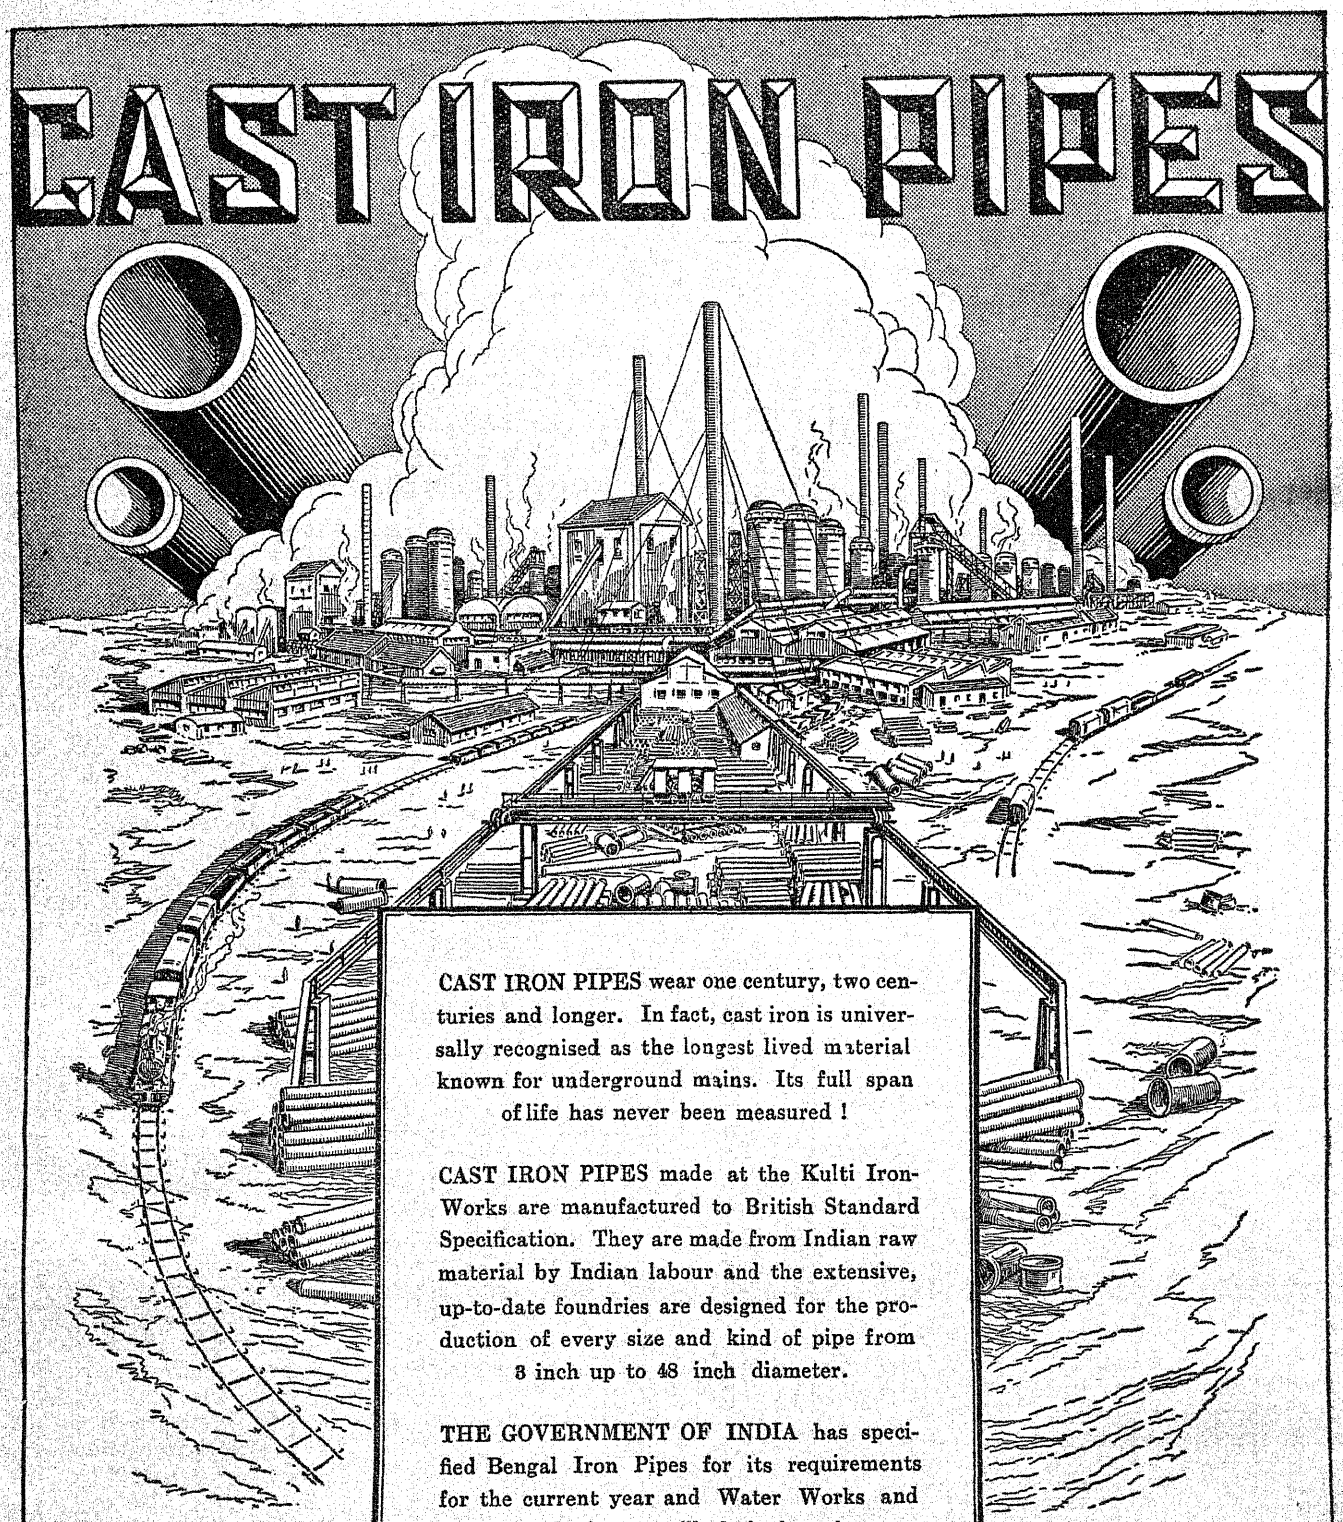
CAST IRON PIPES



CAST IRON PIPES wear one century, two centuries and longer. In fact, cast iron is universally recognised as the longest lived material known for underground mains. Its full span of life has never been measured !

CAST IRON PIPES made at the Kulti Iron-Works are manufactured to British Standard Specification. They are made from Indian raw material by Indian labour and the extensive, up-to-date foundries are designed for the production of every size and kind of pipe from 3 inch up to 48 inch diameter.

THE GOVERNMENT OF INDIA has specified Bengal Iron Pipes for its requirements for the current year and Water Works and Drainage Engineers will find that they can obtain all their needs from the same source.

Grosvenor House, London, Nov. 17.

Will you, my readers, think me foolhardy, or touched by the strange air and environment of London, if I say that I foresee the redemption of 3½ per cent. Rupee Paper, which is popularly believed to be irredeemable? For my part, I am sure this is no passing fancy, no easy surrender to the lure of economic forecasting. If I say I foresee the conversion of 3½ per cent. Paper, it is not a fitful and gifted glimpse of the future, but a careful appraisement of current trends and forces. It is the only denouement of the plot which is unfolding itself daily before my eyes in London. I call it plot, for the British Government is a conspirator actively working for that end; and the hero, which is the money market, has his weaknesses which help the climax of what in a circumscribed view may even be called a tragedy. The truth is that prophecy in the realm of social affairs has to be used and understood in a somewhat special sense. It is no more than the more or less inevitable result of current trends, as the prophet sees them. But there is no inevitability in social affairs. And no prophecy can ever come true in all its details. And this implies that, where the expected result is good, those, who foresee it, ought to help its realisation by conscious striving.

It may be asked whether, after all, the lower trend of interest rates and the increasingly lower yield on giltedge, is such an unmixed good to national economy. The most obvious effect of this, namely, the cut in the income of investors in giltedge, is, no doubt, hardly an argument in its favour. But the benefits of higher giltedge prices are derived more in an indirect than a direct manner. We have, in the first place, no reason to under-rate the direct benefits. In the reconstruction of national budgets, which was undertaken during the depths of the depression and which has only recently been successfully completed, the savings on interest charges have, indeed, had a large place. But governments, even now, are not so affluent that they can treat with indifference the chances of further economies in this line. Every cut in national expenditure, which the higher credit of the Government makes possible, makes a negative or positive reduction in taxation, which even investors in giltedge, along with other sections of the population, would feel grateful for. And there is also the circumstance that investors in giltedge will more than make up by the appreciation of the capital value of their investments the potential loss in current yields and incomes. There is thus a fair balance of advantage between the Government and the various sections of the community which should enable all thoughtful men to hail the further lowering of the yields on giltedge securities as a factor of all-round benefit to the nation.

But by far the most beneficial effect of the trends and events which one can foresee to-day is the fillip to investment in productive activity which the lower yields on giltedge would make possible. Capital in the advanced countries has of late shown a shyness which might well stand comparison with the proverbial shyness of Indian capital. The depression has been attributed by Mr. Keynes to the dis-equilibrium between savings and investment which, it will be seen, is only a comprehensive statement of the other theories of the depression, which gain their identity by giving a particular importance to one of the many factors involved. To take only one instance, the additions to the purchasing power in a country are only a function of new investment; and in the organic economic world there is hardly any factor which cannot be brought into relation with the two factors of savings and investment. That savings have been content to lie with banks is the least unsatisfactory explanation of the complex phenomenon which we call the depression. And whatever the differences as to the causes of the depression, there is always an inevitable agreement that the cure is to be found in the increase of new investment in productive activity. Those, who despair of private capital again flowing automatically into new investment, have advocated various forms of public expenditure calculated to increase the general volume of purchasing power. But it is a fact that no Government has proved itself capable of pursuing a policy of public expenditure to the point at which alone it can bring about a real revival of consumptive demand. Even in America, where President Roosevelt might be said to command the greatest faith in the efficacy of public expenditure as a means of reviving the national economy, only a fraction of the total allotments made by Congress has been availed of up to now. In Britain, the parties have advocated similar measures only when they are in the Opposition. The sense of responsibility which office brings has militated against the initiation of any large schemes.

It would thus seem that the hope of revival lies in bringing about a set of conditions in which savings will flow, of their own accord, into the channels of industry and trade and this would obviously be impossible, so long as the yield on giltedge securities is sufficient to satisfy the moderate demands of investors during the depression. If governments can so manage the monetary policy and so control their credit that the yield on giltedge securities comes down to an inordinately low level, it might well prove to be a potent means of forcing new savings to regain their

spirit of adventure and seek more remunerative fields of investment. Thus, it will be seen that further progress in government's credit is pregnant with good to all sections of the people and publicists like myself have an obvious duty to help its materialisation.

City Editors here are speculating on the possibility of the British Chancellor of the Exchequer converting the 3½ per cent. local loans into a 2½ per cent. issue ; and by such speculation they popularise the idea and help the Government to realise it. Sometime ago, it was thought that the British Government had reached the summit of their ambitions in regard to the conversion of their loans to a lower interest basis, and that the Treasury had, therefore, no further interest in bringing down the long-term rate of interest in the giltedge market. In view of the opinion current at that time, it is interesting that talks of further conversion have now emerged and are quite common. The fact is, that the interest of the Treasury in a further lowering of interest rates in the giltedge market has, by no means, reached its end. In the first place, the Treasury has some conversion or repayment operations still left which can afford further relief to the Exchequer. On November 26, it is drawing 40 per cent. of the issue of £110,000,000 3 per cent. Treasury Bonds 1933-42. That on this occasion the Treasury is drawing 40 per cent. instead of 10 per cent. or nearabouts, is very significant. The original terms of the issue provided for drawings of "not less than 10 per cent." The banks thought that there was implicit in this an agreement on the part of the Government not to draw very much more than 10 per cent. The Treasury has refused to concede this view-point and proposes to draw 40 per cent. of the original issue on November 26. It is, therefore, paying off in April £44 million of this expensive short-term accommodation ; and there can be no doubt that the balance of £44 million will be drawn in November 1935 for repayment in April 1936. There is then £150 million of 2 per cent. Treasury Bonds 1935-38, which can be called for payment at par on April 15, 1935, on three months' notice. Then there are £429 million of 3 per cent. Local Loans which can be redeemed at par at any time by a resolution of the House of Commons on one month's notice in the *London Gazette*. Though indirect as it is, cannot be denied. Thus, there can authorities, the advantage of effecting further savings on these interest charges to the general taxpayer, indirect as it is, cannot be denied. Thus, there can be no doubt that the British Treasury is interested in a further consistent lowering of such rates and will work towards that end.

If by next January the British Government can raise new loans on, or convert existing ones to, a 2½ per cent. basis, I see no reason why our government should not attempt a similar achievement in India. We are one of the few countries in the world to-day who have balanced their budgets, and it is significant that we have balanced it in spite of our Finance Members. And when, as a result of the recovery and readjustment of our finances, it becomes possible to effect a reduction of taxation, the reduced taxes will render possible an expansion of revenue ; and the outlook of the national finances will improve even more. And as for our borrowing capacity, we have in London to-day a surplus of something like £10 million which the Government simply do not know what to do with. If there is any maturity of a sterling loan, the Government would be in the enviable position of being able to repay it out of the surplus balances. So far as India is concerned, we are able to raise our funds in the local market on a 3 per cent. basis. The Indian capital market is, as a matter of fact, in a position to meet all the capital requirements of our Government. It is a peculiar characteristic of the new capital market in India that a portion of the annual sales is earmarked for giltedge. There are a number of people who put out their funds only in giltedge ; and my estimate of such funds is Rs. 20 crores. The capital requirements of our Government for the next five years cannot exceed the amounts earmarked each year for giltedge. It will, therefore, be seen that, for the conversion of 3½ per cent. Paper to a lower basis, the basic factors are very helpful and that all that is required is only a clever management of the market. In no country of the world does the credit of the Government depend solely on what may be called the intrinsic position. It is always necessary for a government, in order to take advantage of a favourable intrinsic position, to manage the market also. In England the Treasury has done it consistently over the last few years ; and at the present moment, it has shown its power of control over the market in a manner which few could have suspected some years ago. In India, too, the Treasury exercises a similar control ; but the control has so far been clumsy and the power has been exercised with a craven heart. The difference between the attitude of the British and Indian Treasuries is best seen in the fact that, while the British Treasury converted as much as £2,000 million at one stroke, and is still likely to attempt another of a fifth of that size, the conversions in India have been for comparatively small amounts. Think big, act big—and results comparable to what has happened in London are within the reach of Sir James Grigg.

OLYMPUS

(FROM OUR CORRESPONDENT)

New Delhi, Nov. 27.

"Well, we are satisfied with the reception accorded by India to the J. P. C. Report." This official declaration is not a propagandist remark. It is the result of applying certain tests which had been laid down for the purpose by officials themselves.

* * *

The tests are as follows. There is not the same hue and cry and "hysterical" comment, as occurred when the Simon Report was published. There are no public meetings and demonstrations being organised to express Indian resentment. The Indian Press has ceased to give it the front page within 3 days of its publication. Various prominent men like Sir Tej Bahadur Sapru, Sir C. P. Ramaswamy Iyer, Mr. Jayakar, and the Aga Khan have not condemned the Report outright.

* * *

More. The Congress press has not declared that the new Constitution should be boycotted. Mr. Satyamurti has even said the Provincial Councils under the proposed constitution should be captured. There have been no strikes and *hartals*. Police have not been summoned anywhere to maintain law and order. Government has not felt necessary to apply the Ordinance Act to suppress seditious writings on the occasion.

* * *

All these tests, say the Olympians, are there to justify the conclusion that the J. P. C. Report has been "well received" on the whole! Perhaps they are right. But, as usual, they are living in their own little "paradise." And just as they declare themselves "surprised," from the highest to the lowest, at the Congress success in the Assembly elections, so they will express another "surprise" when actually things turn out to be different from what the authorities now expect them to be.

* * *

But I, too, must confess to a surprise. There is hardly any one here whom I have met who has, so far, read the financial portion of the J.P.C. Scheme. The question of allocation of revenues between the Centre and the Provinces is very important and so also the division of powers between the Governor-General and his Financial Adviser and the Federal Ministry. There is only one person I have met here who has studied these sections carefully and he remarked "Well, what the Report says does not amount to much and the White Paper scheme remains intact."

* * *

Perhaps, the Government of India will wake up to realities when the Legislative Assembly debates the question in the near future. There is no doubt that the Congress Parliamentary Board will plan out a resolution on the subject and will require notice of it being given by all the Congress Members so that the resolution may be balloted for discussion at the earliest possible date.

* * *

Non-Congressmen may give notice of amendment to the Congress resolution wanting a change here and a change there ; but on the question of the condemnation of the Report there will be practical unanimity of opinion among all Indian elected Members. And when the debate takes place Government will, for the first time, face reality.

A campaign for belittling the Congress achievement at the polls has already commenced in *The Statesman* this morning ; and more literature of that type will, no doubt, be put on the market by official propagandists. But certain indisputable facts emerge from the last election ; and it is as well to record them.

* * *

Out of a million voters for the Assembly 650,000 have recorded their votes ; and of these about 375,000 have backed Congress. In the constituencies where Congress put up its candidates, the non-Congressmen polled only 150,000 which is slightly above a third of the votes polled for Congress. But when the Punjab and Bengal votes are counted (they were anti-communal award and not anti-Congress) it will be clear that Congress poll is actually much bigger.

* * *

It is said here that the Government is not afraid of Congress entry into the Assembly and that, if only a little higher price is paid to Muslims, the Government majority should be secure. I am not sure that even here also the Government will find its calculations incorrect. The maximum support that the Government can expect in the New Assembly may be described thus :

Official and non-official nominated	...	...	39
European group	...	...	8
Landholders	...	...	7
Loyalists	...	...	12
Total		...	66

As against this 80 Members would be in the opposite camp, of whom 14 will hold the key. Whether these 14 will go with the Government, on all important occasions, is doubtful. The chances, therefore, are that, more often than not, the Government will be defeated in the Assembly.

* * *

Among the critical votes in the House will be tariff legislation giving preference to Lancashire, debate on J.P.C. Report, first Finance Bill of Sir James Grigg and, partly, the Railway Budget, which will give opportunity to the Opposition to talk politics and review the Government decision to set up a Statutory Railway Authority.

* * *

Talking of Railways, I am reminded of the doleful talk I recently had with a friend who said that passenger earnings were very dismal. Even the experiment of cheaper fares has been tried, but the financial result remains poor. In a railway in the South, for instance, though traffic went up by 40 per cent. owing to cheaper fares the earnings have come down by 10 per cent. And the difficulty is that any smaller reduction in fares would involve a bigger loss because the increase in travel will not outweigh the reduction in fares. The Railway authorities are, indeed, on the horns of a dilemma.

* * *

The Cochin Harbour Conference is again on. Well briefed lawyers are at it. It may end amicably ; but there has been a turn of the wheel. Whereas last June the Government of India was unfriendly and the Madras Government was helpful, now the former is sympathetic, while the latter obstructive. However Cochin has Rs. 50 lakhs in hand, and means to go ahead with the port.

(FROM OUR CORRESPONDENT)

Thursday, Nov. 29.

My prophecy that the trouble at the Ginning Mill at Ahmedabad would blow over quickly has obviously not come true. It is still persisting and bids fair to grow into a fair-sized trade dispute. Bombay in this respect is earning an unenviable reputation. Dispute within an industry has a way of lingering and growing in intensity in Bombay, which is peculiar to this important industrial centre. The authorities ascribe this proneness to protracted trouble to the presence of mischief-mongering Communists ; and this view would seem to be borne out somewhat by the developments during the great textile strike. But whatever the reason, Bombay must discover a quick cure for her industrial ills, if she is to develop on sound industrial lines.

The trouble at the Madhubhai Mill, it will be recalled, started with the dismissal of four millhands who were Council representatives of the Labour Union. The Union requested the mill authorities to reinstate them, but the latter turned a deaf ear to them. They even employed a new complement of men and commenced working the mill despite vigorous picketing by the Union. They are further greatly chagrined over the behaviour of the Union, which they consider unconstitutional ; and it is understood that they are contemplating strong retaliatory action such as stopping the collection of subscriptions for the Labour Union from the Mills.

Needless to say, this has helped to make the atmosphere more tense and electrical. Rumours of a general strike are in the air and the Mill Owners' Association are holding frantic sessions to consider the measures they should adopt in that gruesome eventuality. If the Union decides on a strike, the Association may announce a direct cut in wages. And so the eternal wrangling goes on.

It would be fatal to the cotton industry of Bombay if another protracted and disastrous general strike followed so closely on the heels of the last one. When will good sense and toleration and a better understanding of ultimate values return to the strike-infested textile trade of Bombay?

In contrast to Bombay, Karachi is maintaining a steady progress in her cotton trade and Mr. Niranjan Prasada, presiding at the annual general meeting of the Karachi Cotton Association, voiced the optimism that is growing within this important industry in Karachi. Mr. Prasada pointed out that already the acreage under cotton cultivation in Sind had increased considerably, and that it was expected to reach the figure of nearly 800.000 acres during the next few years. He referred with gratification to the new gins and factories which had sprung up in many parts of the cotton districts and to several more which were under construction. "We look forward," he said, "to further expansion in our business, and let us rejoice that even if we have not made much progress in the matter of prices and profits, we have at least turned the corner in the matter of the economic activities of our province."

Mr. Prasada also referred to the controversial problem of mixing local and American varieties of cotton. In his opinion, licensing was no practical remedy for the deplorable practice. It is not an equitable safeguard against both poor and affluent mixers ; and mixing itself is, in Mr. Prasada's opinion, not an unmixed evil.

After a careful examination of the question for 20 years, he was forced to the conclusion that mixing had paid and was paying both those who adopted the practice and those who bought such cotton.

"A demand for mixed cotton exists, and there must be a supply of such cotton to meet it. It is contended that it is in the interests of growers to keep American cotton pure, but, speaking from a practical point of view, it does not appear to be so."

Such controversial aspects of the questions apart, Karachi's cotton trade was experiencing a steady advance. During the present season the receipts totalled 1,600,000 bales compared with 900,000 bales in the previous year ; and the export figure of 1,500,000 bales reached during the current year also constituted a record for the port of Karachi.

But the same optimism does not prevail in Karachi's wheat industry. The commercial circles in Karachi are perturbed at the prospect of Karachi's wheat trade as affected by the recent policy of the Railway Board. This question is to be brought up before a meeting of the Associated Chambers of Commerce. It is stated that the completion of the Badin-Viramgam Feeder Railway will throw open the wheat markets of Upper India to a number of small ports in Kathiawar and adjacent districts to the detriment of the trade of the port of Karachi.

The revised and decreased freights over the East Indian Railway are also affecting Karachi's wheat trade, dealers in the United Provinces and the Punjab finding shipments from Calcutta more convenient and possibly cheaper. The need for a more uniform policy on the part of the railway authorities as a natural fillip to trade and industry in India has been emphasized again and again in these columns, but there is a fatality about the Railway Board's policy which makes it run counter to India's industrial interests.

It is interesting in this connection to note that the sympathies of the Bombay Chamber of Commerce are entirely on the side of Karachi and strongly against the increasing importance of the maritime states of Kathiawar. The Committee of the Bombay Chamber of Commerce, summing up their objections to the proposed Bombay-Sind railway, stated that: (1) it was unlikely to prove remunerative ; (2) it was likely to lead to a further diminution in the customs receipts of the Government of India by opening up fresh connections by rail to Kathiawar and Cutch and further increasing the diversion of trade through the maritime states ; (3) it would undoubtedly aggravate the tendency to uneconomic competition between rail and water-borne traffic ; (4) it appeared to be unnecessary as the existing facilities were adequate for all traffic likely to be moving south of Karachi.

Bombay is getting ready for another Municipal election. The date of polling has been provisionally fixed for January 22 and the final electoral roll will be out on December 20. The number of voters, nearly 1,42,000, will be greater than at the last election by about 4,000, despite the fact that there are fewer tenancies than before. Even then the electoral roll is light compared to the very liberal conditions of franchise. A monthly rental of Rs. 10 in Bombay is nearly equal to complete adult franchise and it is certain that a large number of persons who are qualified to vote, do not exercise their franchise. It is further demonstrated by the fact, that between the issue of the final notice for entering the roll and the closing of the list, barely a full month, no fewer than 11,000 names were added.

An additional interest attaches to the next election, as it is not unlikely that it will be conducted on party lines. It is very probable that Congress will put up candidates for every ward and that a Congress Municipal party will be formed. Other parties may not contest the election on a party basis, however. This special enthusiasm on the part of the Congress is believed to be due to the strong feeling in Congress circles that Mr. K. F. Nariman should be the next man to adorn the Mayoral chair. This can only be assured by a majority of Councillors belonging to the Congress party. According to the convention, which, however, is not always tacitly followed, it is the turn of a Parsi member next year to become the Mayor.

The members of the Standing Committee of the present Corporation are in the meantime busy dis-

SOUTH INDIA

COCHIN COMITTEE ON RUBBER RESTRICTION

(FROM OUR CORRESPONDENT).

Madras, Nov. 27.

Hardly a week passes without the cause of South Indian rubber gaining additional strength. It was pointed out last week in these columns that the Indian Rubber Licensing Committee has at last come forward with a formal espousal of the cause of revision of the rubber quota and addressed a memorandum to the Government of India, re-stating in a complete form the whole case for revision. And now a Committee, appointed by the Cochin Government to examine the Rubber Restriction Bill for the State has submitted its report, insisting categorically that the revision of the quota on the lines demanded by the Indian Rubber Licensing Committee is a condition precedent to the enactment of any measure in regard to rubber restriction. The value of this report lies not only in its contents, comprising certain new facts, but also in the place which the Ceylon Government occupies in the execution of the whole scheme of international restriction. It will be remembered that for the purposes of the international agreement, the Government of India is deemed to represent not only British India, but also such of the Native States as are directly interested in the production of rubber and, therefore, in the scheme also. But the Government of India, while signifying their assent to the scheme formulated by the International Committee, made it clear that they cannot tie the hands of the Native States and that formal ratification by the Cochin and Travancore Governments would be necessary to give the requisite sanction to the scheme. So far, the Cochin and Travancore Governments have not committed themselves. And it has all along been the hope of the South Indian rubber planters that the Cochin and Travancore Durbars might save what the Government of India had lost almost irretrievably.

The Cochin Government had formulated a Rubber Restriction Bill, which was duly referred to a Committee of the Legislature ; and now the Committee has reported definitely "that the demand for increase in the quota allotted for South India is just and legitimate and that there is a real danger to the interests of South Indian rubber in ratifying the agreement in its present form" and giving effect to it in Cochin through a formal enactment of the Bill. It is not to be supposed that, in the face of the findings of this Committee and the evidence, which it is able to adduce in its support, the Cochin Government will give legal force to the Bill.

The position, therefore, at present is this. The Government of India have definitely held out a promise that, as soon as the data regarding acreage and exports are collected, they would give the whole matter their best consideration. This promise was afforded by Mr. Bajpai during the debate on the Indian Rubber Restriction Bill. And now the Indian Rubber Licensing Committee, having completed its task of collecting the statistics and judging, in the light of such statistics, the quotas accorded to South India, have approached the Government for the redemption of that promise. The Cochin Government have in their hands the report of a Committee appointed by themselves setting out the facts of the case in a clear and indisputable form. What the Cochin Committee have got to say applies *mutatis mutandis* to Travancore also. And it may be expected that Travancore should be in no hurry to give effect to the scheme in its present form. In such a position it is not unreasonable to hope that irresistible pressure will be ultimately brought to bear on the International Committee.

And now to the report of the present Committee. It has been hinted already that certain new facts have been brought to light by the report. The most important of them is the fact that Mr. Walmsley, who represented before the Committee the viewpoint of the International Committee, had ultimately to concede every argument adduced by the revisionists. Judging from the report, Mr. Walmsley had admitted that the quota, as it stands now, is grossly unfair and inadequate ; that the area under rubber in South India was underestimated when the quota was fixed ; that the exports from the Port of Alleppey were not taken into consideration. On the whole, Mr. Walmsley, on being pressed, admitted that India had a very strong case for the revision of the quota granted to her. But he, however, stuck to his point that, even if revision were unobtainable, it would be to the interests of South Indian rubber to adhere to the scheme. But one point, which Mr. Walmsley made, apparently to strengthen his viewpoint, strangely enough, cuts both ways. Mr. Walmsley maintains that, if Cochin and Travancore were to stand out of the control scheme, the whole scheme may be jeopardised. This has rather strengthened the demand for revision. For if Cochin and Travancore were, indeed, in a position to imperil the agreement, then expediency and justice would alike demand that the International Committee accedes to India's request for a revision.

The real question is whether the adjustment of conflicting interests comprised in the Agreement is so delicate that revision at one point will imperil the whole. Veteran planters, like Mr. Vincent, hold that it will not. In the progressive weakening of the position of the International Committee on this question, the recent revision of the quota accorded to Siam is, perhaps, the most important. The International Committee, by conceding the demands of Siam, has shown clearly that it is possible to set right certain injustices without the necessity of revising this scheme as a whole. The Cochin Committee are positive that the International Committee "has up its sleeve a considerable tonnage of rubber reserved for eventualities as in the case of Siam" and expect that the same will be available for meeting the just claims of India also. Whatever may be the scope, or the lack of it, for such adjustment, there is hardly any room for doubt now, after months of careful investigation by the interests concerned, that, if the scheme were enforced in its present form, a number of small planters, who are by no means a minor part of the industry, will be irretrievably ruined. However the International Committee may view this possible consequence, the Governments concerned cannot regard it with indifference.

By a strange chance Cochin seems to take up all the space allotted to this section. Latest reports regarding the Conference at Delhi seem to be more hopeful than one had reason to hope sometime ago. The months that have elapsed since the complete breakdown of the Simla Conference have served to mellow somewhat the obduracy of the Central Government. One is still in the realm of random conjecture ; but there is reason to believe that the preliminary Conference, which was held a fortnight ago in Madras, has served to bring the disparate viewpoints nearer to one another. The latest *communique* issued by the Government of India makes heartening reading.

> Outlines of a scheme for the distribution of the Customs revenue have been provisionally agreed upon, subject to ratification by the Governments concerned.
>
> On the question of port administration, the efforts of the Conference were directed to the formulation of a scheme which, while affording sufficient guarantee to the parties financially interested in the future of the port, would at the same time not be found to interfere unduly with the system on which various areas included in the port are at present administered. On this subject there has been a free interchange of views and the nature of the difficulties involved is now fully apprehended by all parties.
>
> Though no definite conclusion has been reached, it has been agreed that a detailed scheme will be put forward by the Cochin Durbar before the end of December next which, if accepted by the other parties at the Conference to be held early next year, will, it is hoped, accord a final solution to this difficult problem.

OVERSEAS' NEWS: By Air Mail

GREAT BRITAIN

THE NAVAL TALKS

The methods of international politics have undergone a subtle metamorphosis during the last few decades. Whereas earlier in the century Foreign Ministers of different nations corresponded through pretentious manifestos, they now meet and have "talks." This does not mean that the bonds of reserve between nation and nation are loosening or that there is more amity between the nations to-day. It is just the reverse. This pretence at amity really cloaks a stiffening hostility and it is perhaps true of international politics to-day, that "talks" become more frequent as the strain on the efforts to prevent an international conflagration increases. In fact, when no "talks" are proceeding in any of the countries, it is reasonable to conclude that the barometer of world peace is "set fair."

The Naval Talks began in London on October 23 and are still going on. The chief participants are Great Britain and Japan and the United States are holding a watching brief. But actually she is the principal in the whole drama. For a long time it has been evident that Japan has been chafing under the terms of the Washington Agreement by which Japan cannot have naval parity with the two other paramount naval powers. The bone of contention, therefore, is whether Japan should have naval parity with Great Britain and America. The United States are emphatic that Japan's demand for equality cannot be granted. If Japan should attempt to build a fleet beyond the Washington ratio, America would promptly begin to build to raise her own naval strength to the present ratio. Japan also is adamant and if she should reject the proposals submitted to her that, whilst not affronting the Japanese demand for equality in principle, there should be provisions to prevent a renewed competition in naval armaments, there would be nothing to prevent a fateful race in naval equipment between the three most powerful nations in the world.

The position of Great Britain is peculiar. She has great misgivings about openly severing all alliance with Japan with half her Empire in the Eastern hemisphere. But her Eastern Dominions are strongly opposed to the policy of allowing Japan to assume supremacy in Eastern waters, and are strongly in favour of a naval alliance with America, since Britain's own naval strength is no longer equal to all contingencies.

In the meantime America is supposed to be taking steps to strengthen her bases in the Pacific and even looking for other strategic bases amongst the many islands with which the Pacific is strewn. Should the Naval Talks break down completely, it is not unlikely that the world will shake once more with the thunder of fighting navies.

October Trade:

The overseas trade returns for October should prove satisfactory. Exports touched a new high record since January 1931, and imports since February 1932. The balance of trade with the Dominions is moving, perhaps, in a downward curve. But invisible exports, such as interest on loans etc., are always left out in such computations. On the whole, the condition of trade need not cause much alarm at the moment, although, perhaps, the policy of the Government is not calculated to promote trade to a large extent with all the tariffs and quotas.

The present strength of giltedge and securities, however, can hardly be a correct measure of the confidence of the market in the trade policy of the Government. In fact, there is little connection between the two; and in so far as there is a connection it is a proof that the people do not expect any revival of trade for some time to come. While the Government may put themselves on their backs for their high credit, they must also recognise that such high credit is an adverse reflection in the wisdom of their economic policy.

The Coming Budget:

Thoughts of the next budget are already exercising the minds of the people in general and of the authorities in particular. Will Mr. Neville Chamberlain be able to continue the good work he commenced last year when, after many years, the long chain of precariously balanced budgets was broken? Mr. Neville's conservatism is well-known and he does not indulge in the perilous practice of raising undue hopes. In fact, he has already given a warning regarding the taxation prospects next year which had a weakening effect on the market.

The fact is, the rate of improvement in the revenue returns is not so marked this year as it was in 1932-33. One week the improvement last year was as much as £64 million. This, together with the large saving in expenditure due to the successful conversion of an immense block of War Loans to a lower interest bearing basis, enabled the popular Chancellor to achieve what, though not a staggering surplus, must be considered as very creditable. For the year 1934-35 Mr. Chamberlain's anticipation was a surplus of £29 million—again not stupendous, but enough to effect the little "reliefs" in taxation and cuts which help to justify the men in high places to the poor man in the street.

There is no indication yet that the Chancellor's hopes will not be fulfilled, but things are certainly moving much slower this year. Revenue is still £2,275,150 less than at this period last year. Expenditure stands at £10 million higher. There is, to date, a leeway of £73½ million to be made up. It is true that the heaviest collections are made during the last quarter of the year and there is yet a great deal more to come in on account of income tax which is being shown for a full year (instead of for 3 quarters) in this year's budget. But there is a faint suspicion noticeable in important quarters that things are not working quite according to schedule.

GERMANY

HIGH PRICES

The tendency towards high prices in Germany was hinted at in these columns last week. More details are now available and these go to show that the situation has become serious enough to attract the attention of the Cabinet. At a Cabinet meeting presided over by Herr Hitler last week, a special Commissioner was appointed to supervise prices and check hoarding. Dr. Karl Gordeler, who is the new Price Dictator, will be directly responsible to Hitler and will be able to take decisions swiftly, unhampered by the scores of legislative enactments in force dealing with the problem. Already Price Supervision Boards have taken up the question and General Goering has issued a decree threatening severe action against those who attempt to charge higher prices. Twenty-four butcher shops were closed down forcibly, for charging exorbitant prices, to show that the authorities mean what they say. A systematic campaign has also been launched appealing to the people not to hoard materials in expectation of shortage of household necessities during winter. A 'Winter Relief Fund' has been started and contributions are invited to this fund to be devoted for the ameliorations of distress to the poor and the needy.

The new Price Dictator will have much wider powers than what the Supervision Boards at present enjoy. With his headquarters in Berlin, he will have regional agents to carry out his instructions, and his mandate will extend to the supervision of prices authorised by public corporations and trade associations,

Air Mail Week.

whereas previous measures appear to have chiefly been directed against private shopkeepers. With his experience as Germany's Price Dictator in the deflation period of 1931, when he succeeded in reducing the cost of living by 8 to 10 per cent., the new official commands every advantage and facility, but it is too early to hazard any opinion as to how far he will be successful in checking this tendency of rising costs, at the present period. For with the present economic policy of the Nazi Government centred round making Germany absolutely independent of foreign raw materials of any kind, the tendency is automatically for a higher cost. The various experiments made in the production of synthetic materials, though successful, viewed from the standpoint of possibilities and efficacy, have not yet matured into commercially successful propositions. The unit cost of producing these raw materials continue to be higher than the cost of imported stuff and manufactured articles made out of these synthetic goods must necessarily be higher in price. Food stuffs have admittedly risen in gold prices, some very materially, and the tendency appears to be for these to soar higher still in view of the reclamation of the waste land which is put to agricultural use on a considerable scale.

It has also been the aim of the new economic policy of the government not only to stimulate the volume of production and sales, but to maintain prices, wages and salaries as stable as possible. This rule has been applied specially to industry. The programme for the improvement of the agricultural conditions could be carried out only with rising farm prices and this again had to result in an increase in the retail prices. Since the expenditures of the population on food stuffs have grown, it was necessary, in the interest of the consumer's purchasing power, to hold retail prices of other commodities as low as possible.

In addition to the above the normal growth of consumption, which is a feature of Nazi Germany from the beginning of this year, has now been influenced by purchases for hoarding which have been made by the population in view of the scarcity of the supplies of foreign raw materials. The unusual increase in clothing and textile sales in recent months has been especially striking. In this case a part of the purchases which are otherwise made in the Autumn and Winter, have probably been already made. The figures for the new deposits and withdrawals of the savings banks indicate that savings have been used for this purpose. For the time being the carrying of stocks has been shifted from the manufacturers and traders to consumers. All these circumstances will thus render the duties of the new Dictator rather difficult to perform.

The Saar Plebiscite.—As January draws near, the interest in the Saar problem assumes importance. As usual the interest centres round the activities of the French and the German governments, the one accusing the other of sinister intentions. Herr Burckel, the Saar Plenipotentiary of Herr Hitler, issued an order forbidding all Nazi Storm Troopers to appear in uniform or hold meetings or parade within 25 miles of the Saar frontier for the period of one month between January 10 and February 10. In the course of the order, the official says that "France threatens a military occupation of the Saar. An attempt is made to have you (the Storm Troops) involved in a dangerous game by spreading reports of an impending invasion of the Saar by Storm Troops and Black Guards. I protest against these false allegations before the whole world." Herr Burckel is here referring to the statement made by the French Minister of Foreign Affairs earlier in the week, when he said that if the worst happens "there may have to be military occupation on behalf of the League of Nations and the troops then employed would, in the first instance, be French, but whether exclusively so will be for the League to decide.." In an interview which M. Leval had with Herr Koster, the German Ambassador in France, the former emphasized that France could not and would not renounce any of her duties in executing her international obligations with regard to the League of Nations.

On the questions of the right of the French troops for an entry into Saar on behalf of the League to maintain order, Germany's doubts are not resolved. If Germany were a member of the League, she would have had a voice in the matter and would have received a similar right for sending German troops for the same purpose. Now that she is not there, the only alternative for Germany is to appeal to the Locarno Powers making it clear that the claims of France will ever be unacceptable to Germany. And this she has done.

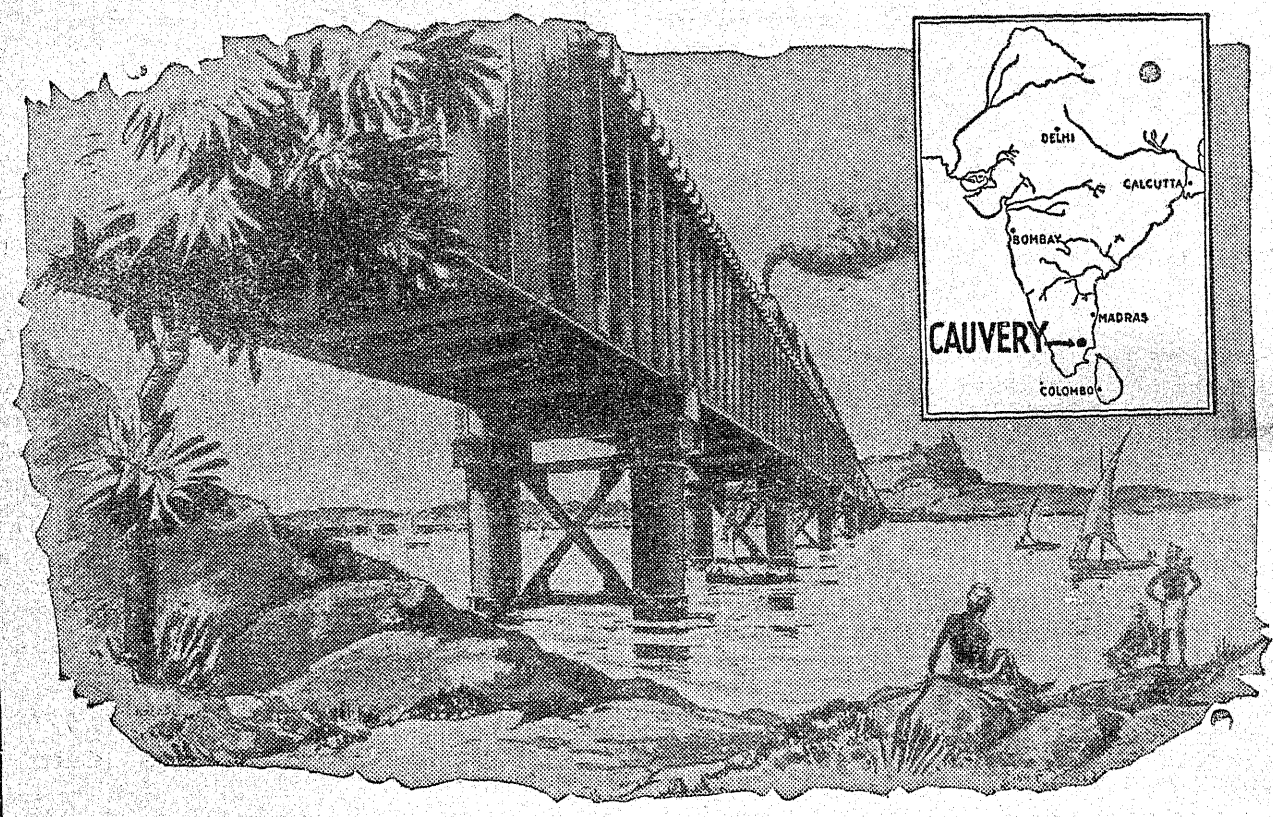
Unfortunately the Powers appear to take a very disinterested view of the situation, at least as far as it can be gauged at present. There is not the slightest desire either in Italy or in the United Kingdom to influence the ballot in any way. Neither the Nazi "German Front" nor the "Freedom Front" clamouring for the *status quo* receive any encouragement from the League Powers. They appear to think that the Saar will not vote for a return to France. In any case France will lose the Saar, either to Germany or to the League, more, probably to Germany. According to the Peace Treaty, Germany must repurchase all the mines and the Reich has not got sufficient gold in the country to do this. The economic condition of the country is only too well known. France on the other hand will have to provide for some 20,000 refugees who will be returning from the Saar in the event of that region going to Germany, and Paris is not very much enamoured of this new accretion in her citizenship.

The disinterestedness is expressed by Sir John Simon's speech in the House of Commons. Taking the typical British statesmanlike view, he said that the responsibility for maintaining order during the forthcoming Plebiscite has been vested in the Governing Commission. Up till now this Commission has been discharging its duties without any difficulty and the situation has not yet arisen in which the Governing body find themselves unable to maintain order. Even as early as in 1926 the Governing Commission had informed the League that it would be entitled to call upon troops stationed outside the territory to assist in maintaining order should necessity arise. If such necessity therefore does occur it will be for the League of Nations to take what further steps they think necessary. The question of sending additional forces for policing, and what nationalities these forces will consist of, will also be decided by the League. In any case the question of the British troops being used in the Saar region does not arise. It has also been made clear during the course of the speech that the French dispositions on this problem are only precautionary and that there can be no question of the use of external forces for preserving order.

AUSTRALIA

CONVERSION OPERATION

In the week just ended Australia has launched another big conversion operation involving State loans to the extent of £14½ millions. The existing loans, which bear an interest at the rate of 5 per cent. and 4 per cent., will now be replaced by a uniform issue bearing an interest rate of 3¼ per cent. The new issue will be spread over a period of thirty to forty years and will be due for redemption in 1964-74. The issue price will be 99 and the cash lists remain open only for a day. Underwriting has already commenced and the success of the conversion is assured.



SPEED

The Cauvery River at Trichinopoly is $2\frac{1}{4}$ times as wide as the Thames at London Bridge.

Braithwaites bridged the river and opened the line to traffic in six months.

This feat was made possible by the Braithwaite organisation backed by their patented system by which they finished the foundations in five weeks. Seven other similar bridges having an aggregate length of two miles were completed by the same methods in 13 months of continuous work.

BRAITHWAITE & CO.
(INDIA), LIMITED

South 1112

CLIVE WORKS, CALCUTTA — MULUND WORKS, BOMBAY

Air Mail Week

The State Loans that are involved in this conversion operation are the following:

South Australia 3¾ per cent. due for redemption in 1934-1935.
Tasmania 4½ per cent. due for redemption in 1916-35.
South Australia 4 per cent. due for redemption in 1916-35.
West Australia 3 per cent. due for redemption in 1915-35.
West Australia 3½ per cent. due for redemption in 1915-35.
South Australia 4 per cent. due for redemption in 1917-36.
West Australia 5 per cent. due for redemption in 1935-45.
Tasmania 4 per cent. due for redemption in 1920-40.

The three last mentioned issues are only optional and are redeemable only next year, but the Chancellor of the Exchequer had announced his agreement to the immediate issue for the conversion of the loans falling due next year. The optional conversion ban has thus been temporarily lifted so as to secure the fullest advantage of the conversion operation.

During the past two years Australia had effected conversions in the London market to the extent of nearly £110 millions and the savings made on the conversions, so far, amount to £2,462,819 in sterling. These savings had already assisted to a considerable extent in the balancing of the Commonwealth Budget: for the chief feature of the last year's budget was the surplus of £1,301,000 after making provision for taxation cuts to the extent of £7,500,000 and after restoring the cuts in Old Age and Soldier Pensions amounting to £1,650,000. The Conversion operation now launched will bring about a further saving of £126,481 in Australian currency, thus making the total saving till now £2,589,300 in Australian Currency or £2,065,244 in sterling. These savings will enable the Commonwealth government to grant further remissions and concessions to the extent of £1,898,000. These concessions will take the form of remissions in primage duty, sales tax, telephone charges, etc., amounting to £830,000 and expenditure concessions amounting to £1,068,000 by way of additional grants to States.

The credit position of the Australian Government has immeasurably improved during recent years due to the splendid recovery that she has been able to make from the effects of the depression. The various reforms brought about in the internal administration of the country, the marked rise in the Commonwealth Banks' London balances, the sharp rise in the trading banks' cash reserves in Australia and in their deposits (both interest bearing and in current accounts), the continued but steady fall in the interest rates, the modest rise in the trading banks' advances—all these have helped to enhance the credit position of the country. The Conversion operations in the past have already tended to bring the interest rates closer to the current trends of world rates. Though the results achieved so far have been satisfactory, there is scope for further savings and, as things are, the Commonwealth Government should explore the possibility of converting Loans to the extent of about £57 millions, bearing interest rates varying from 4½ to 5 per cent., to a lower basis. The Commonwealth 5 per cent. 1935-45 and the New South Wales 5 per cent. 1935-55 will alone require about £45 millions. In view of such a heavy commitment at such an early date, one would have expected the Commonwealth Government to have exercised the option and included these Loans as well in the present conversion programme. Perhaps the authorities wish to watch the situation to see if better terms will not be available by the time these issues mature and probably they are correct. The interest rates are definitely on the downward trend and the advantages to be gained by waiting will be considerable. At any rate on thing is clear, and that is, the present conversion programme is not complete and that some more operations of a similar nature can be expected. The present conversion is hardly the climax of the movement towards a reduction of national debt.

ITALY

NEW SOLUTION OF UNEMPLOYMENT

The ways of other nations are not the ways of Italy. Whether memories of their past glory lend the Romans a distinctiveness which is peculiarly their own, one cannot say. But there is something about Italy which is different from all other countries of the world. Italians, no doubt, are faced with problems similar to those that assail other countries. But they tackle these problems in their own way with, sometimes, remarkable success.

One such startling attempt at solving a serious problem was made in Italy recently, when an accord of great importance was reached between the industrialists and industrial labourers with a view to relieve unemployment.

The sum and substance of the measures agreed upon are,

(1) Reduction of industrial labour to forty hours a week,

(2) Abolition of over-time work,

(3) Substitution, wherever necessary and possible, of female workers by male ones and of minors by adults,

(4) Employment of women and children only for the kind of work suitable for them and in harmony with the exigencies of the factory.

(5) Substitution of those, who are pensioned off or in any other way enjoying repose, by the unemployed.

The reduction of the working hour is to be accompanied by a corresponding reduction in salary or wages. This provision had to be made in order to prevent the rise in the cost of production which would seriously undermine Italy's competitive power in the world markets. Her export trade has already suffered a serious contraction owing to the rise in the value of the lire and the patriotic labourers in Italy readily made the sacrifice, rather than further prejudice their country's cause.

But a scheme has also been evolved to compensate the reduction in income which, in the case of large families, would, no doubt, have disastrous results. A national fund called the *Cassa Nazionale di'integrazione* has been instituted.

The resources of this national fund are contributions from the employers and the employees in the following manner:

I. (*a*) A contribution by all workers of one per cent. of their salary;

(*b*) A contribution of the same amount by the employers.

II. (*a*) A contribution by all overtime workers of five per cent. of their over-time wages.

(*b*) A contribution of the same amount by the employers.

Those workers, who have families and who do not earn an average weekly income equal to forty hours shall have relief out of this fund. This would also compensate for the removal of women and children workers.

It may be recalled that Italy had proposed the question of a uniform forty hour week at the International Labour Conference at Geneva. But the representatives of Capital had with one accord pushed the proposal aside. It was said that reduction of work as a means of solving the problem of unemployment is an economic anomaly. Italy is going to put that anomaly to experiment. Whether or not the experiment will succeed, no one can tell. It is bound to have profound repercussions on the whole of Italy's economic fabric. The removal of women and children from the sphere of labour will not be without its effect on Italy's social life. The abolition of overtime work is also a sensational step. It remains to be seen whether the margin thus created in Italy's industrial activity will be sufficient to absorb the whole of the unemployed population.

JUTE AND JUTE GOODS

JUTE

Calcutta, November 29.

Steady conditions have prevailed in the jute market during the current week and the high price level that was current towards the close of the previous week was well maintained. The highest and lowest quotations for December futures registered during the week were Rs. 29-12 and Rs. 28-12 per bale, respectively.

There was a fairly good business in ready Firsts at Rs. 28-4 and Lightnings at Rs. 23-8 during the earlier part of the week. Towards the close prices have further hardened up and although buyers have not followed the rise, sellers are reserved and are asking Rs. 28-8 and Rs. 23-12 for ready Firsts and Lightnings, respectively. In the loose jute section there was not much doing by the Mills for the better part of the week. It is only towards the close that a small interest was shown in Indian Jat NLR at Rs. 4-6 per md. Mills this year have decidedly bought much more jute than what they did up to this time last year and certain groups are willing to buy only at their levels, and are prepared to follow the rise.

The undertone of the market is, however, fully steady and speculators are very bullish in their ideas. Transactions for March futures have not yet been started, but the private estimate is placing it at a premium of Re. 1-14 over the December rates. It is hoped that with the opening of March business a further good rise in price is likely to take place.

The increase in the imports of jute in the mofussil reported last week is well maintained and is very likely to continue to remain so for some time to come; but, in the present steady conditions of the market, the bearish effect thereof is not likely to be felt until towards the middle or third week of December. Purchases at every decline, for the time being, will prove good for short and immediate profits.

JUTE MANUFACTURES

Very steady conditions prevailed in the hessians market during the early part of the week and ready hessian nine porter was quoting Rs. 9. The rise was mainly due to bear covering and more buying enquiry from the consuming centres. The buyers having been satisfied, the closing tone towards the end of the week was rather easy, though the decline in price was not heavy.

Heavy goods markets has also ruled steady in sympathy with the hessians market, although there was not much doing in this section. Striped heavy cees have been done at Rs. 25-6 and cornsacks at Rs. 25 ready. B. Twills April-June were transacted at Rs. 24-12. The tone of the market was steady.

COTTON AND COTTON GOODS

COTTON

Calcutta, November 29.

The index number of wholesale prices of raw cotton (on the basis of prices in July 1914-100) during October, 1934, showed an improvement of 2 points at 74 points over the previous month.

The world stock of all kinds of cotton on August 31, 1934, including the estimated unpicked portion of new crop, aggregated 36,890,000 bales as against 39,403,000 and 39,181,000 bales respectively on the corresponding dates in 1933 and 1932.

Raw cotton markets in America and England have maintained a firm front during the week. Middling American Spot at Liverpool fluctuated within a narrow margin but the net result was a gain of five points. The closing quotation was 6.93d. Egyptian cotton has reacted smartly after the decline of last week, and Sakell Middling is now higher at 9.14d. than it has been since the first week of March this year.

Broach cotton also records a substantial rise, having gained Rs. 4 on the previous week's closing, and is now quoted at Rs. 219-8. This represents an advance of Rs. 11-8 since the beginning of this month.

COTTON GOODS

Dullness is the prevailing note in all sections of the local market. The demand from upcountry markets has ceased after rather heavy deliveries at the end of last month.

Standard Lancashire cloths continue firm at rates appreciably higher than indigenous lines, so that actual turnover has been negligible. The report of substantial order for Lancashire dhooties at low rates is confirmed: though only a small portion of the order has been actually placed.

All-India piecegoods imports during September totalled 81 million yards compared with 77 million yards in August. The share of the United Kingdom declined by 4½ million yards to 48 million yards, while that of Japan increased by nearly 8 million yards on account of substantially higher takings of plain grey and printed goods.

In the yarn section prices are firm, specially 40's grey and 22's Indian spinning, as stocks are meagre. Lancashire finer counts were not in demand.

September all-India cotton yarn imports amounted to 2.1 million lbs. compared with nearly 2 million lbs. in August. There was a considerable increase in the quantity imported from China, which rose from 399,000 lbs. in August to 681,000 lbs. in September, of which 427,000 lbs. were single grey yarns of over 50 counts against 268,000 lbs. in August and 160,000 lbs. grey folded yarns of counts 51's to 80's against 8,000 lbs. in August. All-India imports of bleached yarn dropped by 20,000 lbs. to 169,000 lbs. Coloured yarn imports rose to 120,000 lbs. compared with 97,000 lbs. in August. Imports of mercerised yarns amounted to 650,000 lbs.

BULLION

GOLD

Calcutta, November 29.

The gold market during the current week has ruled quiet and featureless without any event worth reporting. Prices have fluctuated within small limits, though they are slightly higher over the previous week. London gold is quoted at £6-19-7½d. whereas Bombay quotations are Rs. 34-11-6. London New York Cross rate is quoting at 4.98 5/8 and London Paris at 75.65. The undertone of the market is steady.

LONDON—Air Mail Week.

The Bank of England gold reserve against notes amounted to £192,050,330 on the 7th instant, as compared with £192,001,187 on the previous Wednesday.

In the open market gold to the value of about £1,250,000 was available during the week and was absorbed by general demand.

Owing to the political crisis in France the franc, in terms of the dollar, depreciated to the gold export point and substantial shipments of gold have been made from Paris to New York.

The s.s. **Mooltan,** which sailed from Bombay on the 10th instant, carries gold to the value of about £274,000 consigned to London.

The Transvaal gold output for October, 1934, amounted to 885,627 fine ounces as compared with 857,442 fine ounces for September, 1934, and 908,888 fine ounces for October, 1933.

SILVER

Calcutta, November 29.

Steady but quiet was the silver market during the week without much change in prices and the fluctuations were confined within small limits of Rs. 67-4 and Rs. 66-12. The undertone of the market has remained fully steady all along, though Bombay speculators have been sellers at every good rise, and they have been so far quite successful in their operations.

Speculators are on the look-out for a resumption of heavy buying by America if the proposed rates of 25 per cent. silver and 75 per cent. gold is to be established in respect of monetary stocks.

In the past few weeks about £10,000,000 of European gold has been shipped to America, and the retention of this amount would increase the quantity of silver that must be acquired. Unofficial estimates place the total silver acquisitions by the American Treasury at 300,000,000 ounces, while the official estimate is that 1,314,000,000 ounces must be bought in order to establish the ratio mentioned above. Expectations of further American buying and of smaller shipments from China were responsible for a sharp rise in silver in London.

London—Air Mail Week.

The tendency during the week under review was very firm, a fresh wave of speculative buying following reports from Washington that the silver purchase programme back and prices advanted sharply, 25½d. for cash and 25⅝d. for two months being fixed on the 12th instant these prices were reached by a rise in both quotations of 1½d. over those quoted on the previous working day.

There was a strong demand from the Indian Bazaars as well as from China and local speculators, but the advance attracted a good deal of profit-taking as well as some China selling. In consequence, there was a reaction quotations losing ⅜d. yesterday ad ⅛d. to-day, when prices were fixed at 24⅜d. and 24⅞d. for the respective deliveries.

Although the market may be some what uncertain for the moment in view of the rapidity of the rise, the undertone remains firm.

The highest rate of exchange on New York recorded during the period from the 8th inst., to the 14th inst. was $5.01⅝ and the lowest $4.98¼.

The Stocks in Shanghai on the 10th inst. consisted of about 36,600,000 ounces in Sycee, 299,000,000 dollars and 38,000,000 ounces in Bar silver, as compared with about 39,800,000 ounces in Sycee, 310,000,000 dollars and 37,500,000 ounces in bar silver on the 3rd instant.

SUGAR

Calcutta, November 29.

Prices continue steady and the market has had no abnormal re-actions.

Stocks in the M. B. I ports on November 9, were estimated 19,354 tons as against 8,579 tons in the same date last year.

Imports into British India during January to September are about 161,000 tons (120,000 tons Java) as against 232,000 tons in the same months in 1933.

On the New York Terminal, there was an advance of 2, 9 and 10 points in December, March and May deliveries respectively which was attributed to better European consumption and cessation of December liquidation. On the London Terminal there was an advance of 2½, 1⅜ and 1½d. per Cwt., for December, May and August positions respectively. Market was reported to be featureless but steady after December liquidation. Java London was reported unchanged. Java market was reported steady. Business was done by the "Nivas" for about 30,000 tons on the basis of 2.85 Glds., after which "Nivas" has increased its limit to 3 Glds.

TEA

Calcutta, Nov 29.

On the previous established level there was a good demand for Orange Pekoes and Pekoes in the local market. Dust was easier and prices showed an irregular decline of 3 pies per lb.

The dullness of tea shares is attributed principally to London stocks.

The average price realised in London for the current season's tea is 1s. 0.89d. per lb., against an average for the whole of the previous season of 1s. 2.26d. per lb. So far, therefore, the hope that the new season's teas would be sold at prices likely to give planters bigger profits has not been realised, while the prospect of increased earnings, or even the maintenance of those of the past year, has been clouded by the mistaken forecasts of the course of stocks under the working of the International tea regulation scheme. For the first season during which this was in operation, the proportion of the standard export allowed to be shipped was 85 per cent. and for the current season it was increased to 87-1/2 per cent. in view of the sharp recovery that took place in the commodity. It was expected that by this time substantial inroads would have been made on the unwieldy stocks that had accumulated, thanks to the restriction of exports. The latest statistics of the Tea Brokers Association of London, however, show that stocks at the end of October amounted to 257,425,450 lbs., against 239,042,341 lbs. at the corresponding date in 1932. This large figure is partly due to recent heavy shipments, but principally to small deliveries. Much interest is evident regarding the decision to be taken as to the export quota for the season beginning on April 1st next. It is generally expected that the new quota will be less than that for the current season.

The following are the full particulars of Sale No. 24.

Indian Tea

At the London auction on November 26, 33,100 packages of Indian tea were submitted for sale.

There was a good demand at steady rates with the exception of poorer sorts which were occasionally lower.

The following were the lowest prices fetched during the day's auction :—

Common Pekoe last auction 10¼d., to-day's auction 10⅜d. lb. : Common Broken Pekoe last auction 10⅜d. to-day's auction 10⅜d. lb. : Common Orange Pekoe last auction 10⅜d. to-day's auction 10⅜d. lb. : Common Broken Pekoe last auction 10⅝d. to-day's auction 11d. lb. : Common Broken Pekoe Souching last auction 11d. to-day's auction 10⅞d. lb.

The following were the value prices :—

Clean Common Pekoe last auction 10⅞d., to-day's auction 10⅞d. lb.; Clean Common Broken Pekoe last auction 11d. to-day's auction 11d. lb. : Clean Common Orange Pekoe last auction 10⅝d., to-day's auction 10⅛d. lb. : Clean Common Broken Orange Pekoe last auction 11⅛d., to-day's auction 11d. lb. : Clean Common Broken Pekoe Souching last auction 11d., to-day's auction 11d. lb.

Ceylon Tea

At the London auctions on Nov. 27, 19,600 packages of Ceylon tea were submitted for sale.

Demand was quieter. Commons and medium sorts were irregular and better kinds were steady.

The following were the lowest prices fetched during the day's auction :—

Common Pekoe last auction 11d., to-day's auction 10⅜d. lb.; Common Broken Pekoe last auction 11⅛d., to-day's auction 11d. lb.; Common Orange Pekoe last auction 11d., to-day's auction 10⅜d. lb.; Common Broken Orange Pekoe last auction 11⅛ to-day's auction 11⅛d. lb.

The following were the value prices :—

Clean Common Pekoe last auction 11¼d., to-day's auction 11⅜d. lb.; Clean Common Broken Pekoe last auction 11⅛d., to-day's auction 11⅛d. lb.; Clean Common Orange Pekoe last auction 11⅛d., to-day's auction 11⅛d. lb.; Clean Common Broken Orange Pekoe last auction 11⅜d. lb.day's auction 11¾d. lb.

Market tendency :—Steady at the current rates.

WOOL

There was further increase in imports of wool and woollen manufactures into India during September as compared with the figures for September, 1933, raw wool accounting for 375,000 lbs. valued at Rs. 3 lakhs and woollen manufactures for Rs. 66.7 lakhs. Provincial shares are :—

	September 1933 Rs. (lakhs)	September 1934 Rs. (lakhs)
Bengal	10	17
Bombay	14.96	24.38
Sind	17.24	22.71
Madras	0.5	0.3
Burma	2.31	2.33

Taking the import figures of woollen piecegoods for the first half of the current fiscal year in conjunction with the figures for the corresponding half of the previous year, the most striking feature of the returns is the considerable change which has taken place in the sources of imports, and the emergence of Japan as one of the principal suppliers of woollen piecegoods to this country. Of the 7.4 million yards of woollen piecegoods imported in the first half of 1933-34, France supplied 2.3 million yards; the United Kingdom 1.9 million yards; and Japan and Italy 1.2 and 1.4 million yards respectively. On the other hand, of the 7.3 million yards of woollen piecegoods (including mixtures) imported during the first half of the present financial year, Japan supplied no less than 3.9 million yards and the United Kingdom 2.3 million yards. France and Italy sent 300,000 yards and 500,000 yards respectively. Moreover, in any just appraisement of the import trade in woollen piecegoods of this country, account has to be taken of the tremendous increase which has taken place in the importations of "other sorts" which amounted to no less than 986,000 lbs. valued at Rs. 8.79 lakhs during the first half of the present financial year as compared with only 17,000 lbs. valued at Rs. 1.78 lakhs in the corresponding half of the previous year.

There was a shrinkage in the number of shawls imported into India during the month of September, which amounted to 34,000 valued at Rs. 1.23 lakhs, as compared with 80,000 valued at Rs. 2.39 lakhs in the corresponding month of the previous year. The biggest drop registered was in the case of Germany—12,000 valued at Rs. 71,000 is against 43,000 valued at just under Rs. 2 lakhs in September last year.

(Continued from page 1387).

cussing the next year's budget. Prof. S. R. Davar levelled a number of formidable arguments against it. He characterised the budget as an 'expediency budget' in which considerations of sound finance had been sacrificed in order to balance both sides. Without the window-dressing, the budget would show a deficit of Rs. 20 lakhs. Great inroads into reserves had been made—always a dangerous practice to indulge in with alacrity. The credit, under extraordinary receipts, for Rs. 7,40,000 was made up of interest on investments in the Net Premia Fund and the excess interest earned on sinking fund investments during the years 1932-33 and 1933-34 as well as similar interests in the next year. In view of the artificial level of giltedge and securities, such a procedure would seem to smack of speculation. The suggestion to extend the currency of the Development Loan from 18 to 30 years was calculated to perpetuate the indebtedness of the Corporation, for once conceded it would go on forever.

There is a great deal of logic on Mr. Davar's side ; but a rigid adherence to economic principles in an emergency is not always possible. It is accepted on all hands that the extension of the currency of the loan is by far the quickest and surest relief that can be obtained at the moment and some relief must be forthcoming if the Corporation is to function. The present budget may be artificially balanced. But, after all, there are only two natural methods of balancing a budget ; by severe retrenchment or by additional taxation, both of which are ruled out by present circumstances. Everything considered, it should be admitted that Mr. I. H. Taunton, the Municipal Commissioner, has prepared a fairly reasonable budget that takes into cognisance all the facts of the case.

STATISTICAL INFORMATION

RAILWAY TRAFFIC

LATEST EARNINGS AND WORKING EXPENSES.

The total approximate gross earnings of all State-owned railways for the week ending 10th November, 1934 (32nd week), amount to Rs. 144 lakhs, Rs. 19 lakhs LESS than the figures for the preceding week and Rs. 25 lakhs LESS than the actuals for the corresponding week of the previous year and Rs. 16 lakhs LESS than the actuals for the corresponding week of 1932-33.

The total approximate gross earnings from 1st April to 10th November, 1934, amount to Rs. 52.47 crores or Rs. 272 lakhs MORE than the actuals for the corresponding period of the previous year and Rs. 369 lakhs MORE than the actuals for the corresponding period of 1932-33.

The following are the up-to-date approximate gross earnings and working expenses of the State-owned railways from 1st April, 1934, as compared with the actuals of the corresponding period of last year.

Railways.	Earnings. Up to 3-11-33 (in lakhs.)	Earnings. Up to 3-11-34 (in lakhs.)	Working Expenses.* Up to 30-9-33 (in lakhs.)	Working Expenses.* Up to 30-9-34 (in lakhs.)

TRADE OF CALCUTTA

There was a further improvement in the overseas import trade of Calcutta in private merchandise in October 1934 over that of the previous month, the value rising from Rs. 2.93 crores to Rs. 3.19 crores against Rs. 3.06 crores in October 1933, states the Collector of Customs. Exports, however, declined from Rs. 5.43 crores to Rs. 5.40 crores against Rs. 5.70 crores in October 1933.

IMPORTS

A comparison of the values of the principal imports with the figures for October 1933 is given below, the figures in brackets representing the increase or decrease as the case may be:—

	In lakhs of rupees.
Cotton goods	64 (+29)
Machinery and millwork	41 (−18)
Wool	18 (+ 4)
Iron and Steel	14 (− 2)
Oils, mineral	14 (− 7)
Electrical instruments	10 (+ 3)
Paper and pasteboard	9 (+ 2)
Hardware	8 (− 1)
Provisions and oilman's store ...	8 (No change)
Liquors	7 (+ 1)
Chemicals and chemical preparations (excluding chemical manures and medicine)	7 (− 2)
Sugar	6 (+ 3)
Drugs and machines	6 (− 1)
Motor cars	5 (− 1)
Betelnuts	4 (No change)

The total yardage of cotton piecegoods increased from 14 million to 33 million and the value advanced from Rs. 23 lakhs to Rs. 51 lakhs.

It is after many months that an appreciable quantity of refined sugar was imported from Java.

The full under oils-mineral was principally due to lesser imports of Russian oil.

EXPORTS

The variations in the value of the principal exports as compared with the trade of October 1933 are indicated below:—

	In lakhs of rupees.
Jute manufactures	232 (− 9)
Tea	127 (−14)
Jute (raw)	78 (− 5)
Lac	24 (+ 6)
Oilseeds (non-essential)	13 (−16)
Hides and skins	13 (− 2)
Pig iron	10 (+ 4)
Grain pulse and flour	6 (+ 1)

The heavy fall under oilseeds was due to abnormally low exports of linseed.

DIRECTION OF EXPORTS

Tea, lac and manganese ore were shipped mainly to the United Kingdom, raw jute and hides to Germany, gunny bags to the Commonwealth of Australia, gunny cloth to the Argentine Republic, pig iron to Japan, linseed to Egypt, skins to the United States of America, and rice to the Union of South Africa.

THE WEEK IN THE EXCHANGES

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, Friday Morning,
November 30, 1934.

Active conditions prevailed in almost all sections of the market and a large business was put through. Government Securities remained very steady, although trading was on a limited scale. Jute Mills shares advanced further since we reported last and almost a boom condition has obtained. Cottons kept steady without much business pasing. After their recent fall coal shares have steadied up to some extent and there are buyers for some of the popular stocks at better rates. Among Miscellaneous Industrials, the fall in Electric Power Supply Companies' shares has been arrested and buyers appeared for several popular stocks. Engineering issues remained practically unchanged while Sugar Mills shares have been quiet.

The improvement manifested in tea shares has continued and enquiry has broadened. Rubber shares attracted more attention and prices have hardened.

Government Securities.—Giltedge section kept steady although the volume of trade has dwindled considerably following the subdued tone of India Government's Sterling Securities in London.

The apathy of the operators, which appears to be only temporary, may be accounted for by the fact that Jute shares are booming at the present moment and most of the attention of the markets are centred round that particular group. 3½ per cent. Govt. Paper is quoted at Rs. 94-14 at the time of writing. 3½ per cent. 1947/50 Loan is a shade easier at Rs. 102-6 and 3 per cent. Loan 1941 at Rs. 100-7.

4 per cent. 1960/70 Loan is now standing at Rs. 109-3. Medium dated loans have been steady and there are buyers for 1934 at Rs. 105-10 and 1940/43 at Rs 109-7. Short-dated loans, however, remained unchanged at last levels. The Bank rate remained at 3½ per cent. with the percentage of cash to Liabilities at 31.69.

Fixed Interest bearing Securities.—The demand for Jute mills and well secured Industrial Preference shares continued unabated and offerings have been placed without difficulty, the restricted business, however, was due to scarcity of sellers.

Only a small business was reported in Debentures. There are buyers for Calcutta Port and Municipal issues, but there has been next to nothing doing.

Jute Mills and other Industrial Debentures were also in demand, but no business of any note was reported so far.

Other Investment Stocks.—Imperial Bank shares were rather easier. The fully paid up issues are now quoted at Rs. 1,595 and contributes at Rs. 398 the enquiry having been satisfied for the time being. Central Bank's shares also are easier at Rs. 34-12. No business was reported in any other Bank's shares.

Only a small trade was completed in Light Railway shares. The Government guaranteed shares, as usual, were in better demand at full rates, but absence of sellers accounted for the restricted turnover. Among District Board guaranteed stocks, Buktiarpur-Bihars have buyers at Rs. 67 but sellers wanted a couple of rupees more.

Hoshiarpur Doab, Sara Serajgunge and Mymensingh-Bhairab-Bazar (rebate) were on offer at quotation rates. A transaction was reported in Howrah-Amta at Rs. 101-8 and Dehri-Rohtas changed hands at Rs. 14.

Among Insurance companies' shares, Concord of India eased off slightly to Rs. 11-10 Premium due to profit-taking while Triton was riding still higher at Rs. 225.

Cottons.—This section was overshadowed by the activities in Jute section and only a moderate number of dealings was put through. Dunbar (ordy.) after their recent drop have again marked up to Rs. 151 while Kesoram (ordy.) kept barely steady round about Rs. 4-14. Benares Cotton and Silks recorded a deal at Re. 1-12 while Mohini kept steady at Rs. 11-2.

Coals.—Coal shares have recovered to some extent after their recent fall and a fair amount of quiet buying of some of the more popular stocks was apparent. Bengal have recovered to Rs. 235 and Equitables (ordy.) to Rs. 24-8. There are buyers of Burrakur (ordy.) at Rs. 13. New Bheerbum improved to Rs. 13-8.

Amalgamateds kept fairly steady at Rs. 21-8 and Pench Valley at Rs. 43-8. Raneegunge accounted for a fair turnover round Rs. 30-8 while New Manbhum advanced to Rs. 54 ex-dividend.

Jutes.—The activity manifested in this section during the previous week has been fully maintained and practically a boom condition has obtained. A long list of transactions has been recorded and shares without any exception have attained higher levels and a general rise of 20 to 30 points during the week was registered.

Auckland advanced from Rs. 235 cum-dividend to Rs. 244 the ex-dividend of Rs. 6 per share. Anglo India from a quotation of Rs. 428 was marked up to Rs. 460 at the time of writing. Bally, from a quotation of Rs. 202 advanced to Rs. 225; Belvederes from Rs. 405 improved to Rs. 423; Champdany from Rs. 173 was marked up to Rs. 197; Dalhousie from Rs. 377 cum-dividend was dealt in at Rs. 400; Fort Gloster from a quotation of Rs. 580 was taken off the market up to Rs. 630. Fort William from Rs. 280 changed hands up to Rs. 327; Gourepore advanced from Rs. 650 to Rs. 675; Lansdownes from Rs. 160 to Rs. 188; Lothians from Rs. 280 to Rs. 314; Naihati from Rs. 440 cum-dividend to Rs. 458 x-d. Standard from Rs. 358 improved to Rs. 365 and Union from Rs. 495 to Rs. 505.

Among rupee 10 stocks, Clives advanced from Rs. 33-8 cum-dividend to Rs. 34-8 X-D; Hukumchands from Rs. 14 to Rs. 15-10; Birla from Rs. 14-8 to Rs. 16-4; National from Rs. 24-4 to Rs. 26-4; Reliance from Rs. 77-8 to Rs. 80-8 and Chitavalsah from Rs. 23 to Rs. 34-4.

THE BOROOAH TIMBER CO., LD.

NOTICE

is hereby given that the fifteenth Ordinary General Meeting of the above-named Company will be held at the Registered Office, No. 12, Mission Row, Calcutta, on Wednesday, the 5th day of December, 1934 at 4-15 p.m., for the purpose of receiving and considering the Directors' Report, the Statement of Accounts and Balance Sheet for the year ended 30th June, 1934, and to transact any other Ordinary business of the Company.

The Share Transfer Books of the Company will be closed from the 29th November, 1934 to the 5th December, 1934, both days inclusive.

By Order of the Board,
MARTIN & CO.,
Managing Agents.

Dated Calcutta, the 26th November, 1934.

Apart from the above, Howrahs and Kamarhattys, the barometer stocks advanced from Rs. 56-8 to Rs. 59-2 and from Rs. 595 to Rs. 612, respectively during the week. Nuddea, however, did not show much change and remained stationary round about Rs. 56 while Megna fluctuated between Rs. 42 and Rs. 44; Indian, however, was marked up sharply to Rs. 390 from a quotation of Rs. 345.

The market is still looking remarkably healthy and a further rise in share values is not unlikely, due to abnormally cheap money and when Investors are satisfied with a return of 5 per cent. on their capital invested.

Electricals.—Electric Power Supply Companies' shares have again returned to favour and a fair turnover resulted at hardening rates. Bareilly kept steady at Rs. 13-6, Patna changed hands at Rs. 17-8, while Muttra advanced to Rs. 10-6 on dividend rumour. Benares, however, continued dull at Rs. 14; Jubbulpore accounted for a deal at Rs. 13; Mirzapore at Rs. 5-12 and Cuttack at Rs. 6-4. There are, however, sellers of Shahajanpore at Rs. 7-8; Upper Ganges at Rs. 12-12 and Upper Jumna at Rs. 11-4; Dacca Electrics were marked up to Rs. 19-12; U. P. Electrics kept steady at the decline at Rs. 157 while Rawalpindi was on offer at Rs. 23-12 with no declared buyers.

Engineering.—Apart from a strong enquiry for Arthur Butler up to Rs. 15-12 from a quotation of Rs. 13-8, no business of any note was reported in this section. Among Iron and Steel issues, Bengal Iron came to business at Rs. 3-7 and Indian Iron and Steel at Rs. 6-12. Indian Standard Wagon (ordy.) was marked at Rs. 54-8 and Burn & Co. (ordy.) at Rs. 275. Indian Galvanizing was quoted at Rs. 9 and Marshalls at Rs. 1-7.

Sugars.—Sugar shares on the whole, remained quiet and in several instances there are more sellers than buyers. The subdued feeling in this section may be attributed to the formation of All India Village Industries Association whose activities it is stated, will be directed towards sugar among some other things.

Balarampur were dealt in fairly freely round Rs. 18-12, Bharat changed hands at Rs. 7-8; Carew & Co. recorded a few deals round about Rs. 21; Cawnpore (ordy.) was easier at Rs. 35-8 and Samastipore Central at Rs. 11-12.

Miscellaneous.—This section disclosed no fresh feature and there was no important changed in prices. B. I. Corporation remained dull at about last levels while Burma Corporation was easier on lower London advices. Ivan Jones changed hands at Rs. 3-6 and Karanpure Development at Rs. 11-4. Indian National Airways (Prefd. Ordy.) shares recorded a deal, for the first time, at Rs. 10. Paper Mills shares kept steady at the decline while Shipping Companies shares were in better demand. Bengal Assam Steamships advanced to Rs. 222 and Indian General Navigation at Rs. 109-8. Port Shipping was marked at Rs. 15.

Rubber.—A little more interest was evinced in Rubber shares and prices improved slightly owing to the rise in the prices of the commodity.

Among Oil shares, British Ceylon Corporation was marked at Rs. 10-5 and Howrah Oil advanced to Rs. 12-4. Tide Water-Oil was slightly easier and recorded a deal at Rs. 9-4. Midnapore Zemindary (ordy.) was slightly easier at Rs. 74; Ganges Rope was marked at Rs. 257 and Calcutta Ice at Rs. 9.

Teas.—The better feeling which was in evidence in this section during the last week has been fully maintained during the current week but buying was discriminatory and confined to selected stocks. Better reports of Tea sales are forthcoming from London and local sale was also satisfactory.

The operators, both actual and prospective are waiting for the announcement of the next season's Export quota which is expected within a few days. A better market for tea shares is expected in early next month.

Hattikhira, Hasimara, Gangaram, Huldibari and Sarujaon were popular features. Bishunath and Sonai River are also considered cheap at the present level and some capital appreciation is expected in these shares before long.

BOMBAY STOCK EXCHANGE

(*By Wire*)

(From Our Correspondent)

Bombay, Thursday,
November, 29, 1934.

Money Market.—Money was easy with Call Money quoting 1 per cent.

Exchange.—The exchange market was steady with Banks selling T. T. at 1s. 6 3/64d. for November/December; 1s. 6 1/32d. for January/February and 1s. 6d. for March/July. Banks are buying 3 months bills at 1s. 6 1/8d. for November/December.

Securities Market.—Since the giltedged market in London was ruling quiet, rupee securities ruled steady with minor fluctuations, though at the close they firmed up slightly. 3½ per cent. Government Paper is around Rs. 94-15. There is good enquiry for 1960/70 around Rs. 109-7 and 1945/55 at Rs. 118. 1947/50 finds buyers at Rs. 102-7 ; 1934 is quoted at Rs. 105-9 ; 1955-60 at Rs. 114-12 ; 1935 at Rs. 101-11 ; 1939/44 at Rs. 108-7 ; 1940-43 at Rs. 109-7 ; 1938/40 at Rs. 109-7 ; 6½ per cent. Bombay Development at Rs. 103-12-6 ; and 6½ per cent. 1935 Bonds at Rs. 102-12.

We find from to-day's cable that 3½ per cent. Indi Sterling Loan has improved to £97. We hope to see higher levels for Government Securities in general and some quarters expect 3½ per cent Paper to reach par gradually.

Shares.—Owing to easy money conditions, and partly due to bear covering, most scrips show an all round improvement over the last week.

Textiles.—Though the textiles shares, last week, closed easier, on account of the talks of stopping double shift system from January, this week leading scrips, specially Dyeings, have shown good rise at the close on the strength in cotton prices. Bombay Dyeings, on speculative interest, have risen from Rs. 893 to Rs. 916-4. Central Indias are better at Rs. 320 ; Kohinoors at Rs. 216-4. On rumours of good dividend by Kohinoor Company, these shares are being talked of as reaching appreciably higher levels. Centuries closed higher at Rs. 313-2; Colabas at Rs. 132-8;

UPPER GANGES VALLEY ELECTRICITY CO., LTD.

NOTICE

is hereby given that the Ninth Ordinary General Meeting of the above-named Company will be held at the Registered Office, No. 12, Mission Row, Calcutta, on Saturday, the 8th December, 1934, at 11-0 a.m. for the purpose of receiving and considering the Directors' Report, the Statement of Accounts and Balance Sheet for the half-year ended 30th June, 1934, and to transact any other ordinary business of the Company.

The Share Transfer Books of the Company will be closed from the 29th November to the 8th December, 1934, both days inclusive.

By Order of the Board,
MARTIN & CO.,
Managing Agents.

CALCUTTA,
The 26th November, 1934.

UPPER JUMNA VALLEY ELECTRICITY SUPPLY CO., LTD.

NOTICE

is hereby given that the Ninth Ordinary General Meeting of the above-named Company will be held at the Registered Office, No. 12, Mission Row, Calcutta, on Saturday, the 8th December, 1934, at 11-5 a.m. for the purpose of receiving and considering the Directors' Report, the Statement of Accounts and Balance Sheet for the half-year ended 30th June, 1934, and to transact any other ordinary business of the Company.

The Share Transfer Books of the Company will be closed from the 29th November to the 8th December, 1934, both days inclusive.

By Order of the Board,
MARTIN & CO.,
Managing Agents.

CALCUTTA,
The 26th November, 1934.

Gokaks at Rs. 175; Indian Bleaching at Rs. 151-14; Indore Malwa at Rs. 113-12; Lakshmi at Rs. 815; Morarji at Rs. 1,470; New Great at Rs. 215-10; Sholapur at Rs. 2,900; Swadeshi at Rs. 233-2; Vishnu at Rs. 1,580.

Hydro Electrics.—This section ruled steady, with Andhras closing at Rs. 1,643-12, Hydros at Rs. 161-8 and Powers at Rs. 1,350.

Iron and Steel.—Fears of Belgium going off Gold standard being temporarily allayed, Steel shares moved up with Ordinaries rising from Rs. 92 to Rs. 98-12 and Deferreds from Rs. 400 to Rs. 428-12. *On further small rise in Ordinaries and Deferreds, we prefer profit-taking.* Second Preferences, on account of good enquiry, ruled around Rs. 158.

Cements.—This section ruled practically steady, with Bundis at Rs. 32-2; Katni Defd. at Rs. 1,140 and Ordinary at Rs. 326-4; Okha at Rs. 183-12; Punjab at Rs. 23-8; Shahabad at Rs. 338-12; United at Rs. 68; Indian Cement at Rs. 339-12.

Miscellaneous.—As mentioned last week, Belapur Company declared a dividend of Rs. 10 together with a bonus of Rs. 2, free of tax, per share. The net profit for the year ending September 1934, is Rs. 10,67,372; transfer to Reserve Fund Rs. 4 lakhs. *This is, indeed, a very impressive report. As expected, these shares moved up from Rs. 235 to Rs. 250-10 with chances of further rising by Rs. 15 to 20.*

Bombay Burmas on bear covering as well as rumours of a good report, in spite of a lower dividend, have risen to Rs. 413-2 for old scrips and Rs. 131-4 for New shares. The separation of Burma from India as suggested in the Joint Committee Report has been taken as a bullish factor for Bombay Burmas. Telephones are active on talks of conversion of the Company's 6½ per cent. Debentures on a lower yield basis, closed higher at Rs. 112-8. Trams were steady at Rs. 158-2; Bombay steam at Rs. 291-14; Petrols at Rs. 4-13; Constructions at Rs. 80.

Banks and Insurance.—Banks were steady with Barodas at Rs. 102-8; Central Banks at Rs. 34-4. Much enquiry was not in evidence in Imperial Banks' shares. Fully paids were steady at Rs. 1,597-8 and Partly paids at Rs. 400. Bank of Indias were quoted at Rs. 119-8, and Unions at Rs. 5-8.

New India Insurance which were around Rs. 39 have firmed up to Rs. 39; Oriental Life were steady at Rs. 4,015 and Vulcans at Rs. 8-8.

Friday Report.—On Friday morning, the market opened strong with Bombay Dyeings at Rs. 917-8; Century at Rs. 315 and Nagpur at Rs. 322-8. In other sections, the same tone prevailed with Indian Cements at Rs. 347-8; Tata Ordinary at Rs. 100 and Deferred at Rs. 431-4; Andhra Power at Rs. 1,650; Tata Power at Rs. 1,350; and Belapur at Rs. 252-8.

In the Securities section, 3½ per cent. opened strong at Rs. 95.

MADRAS STOCK EXCHANGE.

(*By Wire*)

(From Our Correspondent)

Thursday,

Madras, November 29.

Securities Market.—This market was dull and steady with little business passing, medium dated loans were slightly firmer even though the enquiry was limited. Mysore Loans showed practically no change whilst Cochin Loan had sellers at Rs. 111. The demand for Port Trust and Municipal Debentures was good. A line of Rangoon Port Trust 4 per cent. debentures repayable in 1936 was placed at Rs. 101-8 with further buyers in evidence at this level.

Shares.—Amongst joint stock company debentures Nilgiri Neerugundi Estates noted a deal at Rs. 101 whilst Cochin Malabar Estates had sellers at Rs. 106. The Preference Share Market was fairly active with Spencer and Company B done up to Rs. 12-12 on Calcutta account, whilst Bombay came out as a buyer of Tata Iron and Steel, second preferences, up to Rs. 157½. Probably Tata Steels may improve further; Vasanta Mill preferences met with business at Rs. 103-8 with buyers over. Premier Hosiery Works preferences were again popular at Rs. 10-12.

Banks.—These shares were dull with Imperials slightly easier. There was a good enquiry for Mysore Banks which lifted the price to Rs. 270.

Public Utilities were dull but steady. Some enquiry was noticeable for Vellores around Rs. 12-12 ex-dividend, whilst West Coast Electrics had sellers at 8 annas premium after business was done at this price. Madras Telephones were done at Rs. 19-8 and Rs. 19-4 whilst Rangoon telephones were done at Rs. 13-10.

Mills.—Mill shares were quiet but at the close owing to the rise in the price of raw cotton they showed some activity. Business was done on a small scale with Cambodias done at Rs. 10-8 with buyers over.

Cements.—These shares had an improved tone mainly on Bombay support. Most shares closed at the highest for the month. Coimbatore, after being done up to Rs. 167, fell to Rs. 152 sellers.

Sugar.—The sugar section was dull with the exception of Belapurs which rose steeply to Rs. 250 cum dividend and bonus. There were sellers in almost all scrips at about quoted levels with buyers uninterested owing to the uncertain outlook in view of increased imports, the lower prices for Java sugar and the absence of news regarding the Marketing Company. India Sugars and Refineries Limited will start crushing this season. It is expected that the results for the current season will be satisfactory. These are now quoted at Rs. 11. *On any further fall these shares will be worth purchasing.* Mysore sugars were taken up in fair quantity at Rs. 183-12. *These also appear a reasonably good investment.*

Plantations.—In the Planting section in spite of the firmness displayed by raw rubber and the speculative activity in shares on the London Stock Exchange, the local market failed to respond. There continued to be sellers for most of the scrips at well below quotation levels.

Tea.—In this section there were sellers for Vellamalais, Devasholas, Peermades and Periakaramalais. Devasholas lost a few annas and closed at Rs. 7-14 whilst Peermades were taken up at Rs. 24-8 and Periakaramalais at Rs. 39 cum dividend. Vellamalais were a weak feature at about Rs. 9-8, the accounts and report of the Periakaramalai Tea and Produce Company Limited for the year ended June 30, 1934, were published during the week. They disclose excellent results for the past season. The Directors have recommended a final dividend of 7½ per cent. free of Income Tax making a total of 17½ per cent. free of Income Tax. The carry forward amount is equivalent to 25 per cent. of the capital. The current season's prospects are good; the shares at the current level of Rs. 41 cum dividend give a yield of about 6 per cent. free of Income Tax on the basis of a 17½ per cent. dividend. *They appear an excellent investment with chances of capital appreciation and higher dividends.* The Company has paid up to 50 per cent. in good years.

Miscellaneous.—In this section Burma Corporations and Tata Steels were prominent features. Burma Corporations were dealt in about Rs. 8-4 whilst Tata Iron and Steel, Ordinary and Deferred steadily improved since the close of last week, touching Rs. 98 and Rs. 425 for the Ordinary and Deferred respectively. At the close of business to-day jute shares were a prominent feature in the local market this week which is rare. The feature was Chitavalsah jutes which rose from Rs. 25 the close of last week to Rs. 34 to-day, Anglo-Indias were also dealt in around Rs. 450.

LONDON STOCK EXCHANGE

On the Stock Exchange during the week under review most of the markets were quiet and featureless. The giltedge market was dull during the early part of the week, but on Wednesday it was firm and on the next day it showed an improvement. There was a slight improvement in Indian loans on Saturday but other securities declined. It continued to be dull for the following two days and on Wednesday it ruled firm, War Loans, Victory Bonds and 4 per cent. Funding Loan being quoted higher. On Thursday there were recorded several advances, 2½ per cent. Consols recovering to 90⅛ and Indian 5 per cent. and 4 per cent. 1948-53 Loans changing hands at better prices. Among other sections Rubber showed an improvement during the early part of the week and maintained the same strength throughout. Teas were steady and Minings were weak. Home Rails showed a declining tendency owing to lack of support. Oils were steady at first but were quoted lower during the latter half of the week. Industrials did not attract much business and there were very few price changes.

NEW YORK STOCK EXCHANGE

November 29.

New York market ruled steady and active with an upward tendency. Steel, Motor and Building stocks like Bethlehem Steel, General Motors, Ford Motors of Canada and American Radiator look attractive. The Federal Court's action in granting the restraining order against lowering the rates in Metropolitan areas is naturally construed as a point greatly in favour of the utilities.

Ford Motors of Canada declared their half-yearly dividend at 75 cents as against 50 cents in May last.

COMPANY REPORTS

NORTHBROOK JUTE CO., LTD.

The Directors beg to submit the audited accounts of the Company for the half-year ended 30th September, 1934, showing earnings on Revenue Account of Rs. 99,563--5-0 and a balance at credit of Profit and Loss Account of Rs. 1,83,664-10-7 which includes Rs. 35,962-13-10 brought forward from the last half-year.

The Directors propose to dispose of this as follows:—

	Rs.	A.	P.
In paying a Dividend on the Preference shares at the rate of Rs. 7 per cent. per annum, free of Income-Tax ...	52,500	0	0
In paying a Dividend on the Ordinary shares of Rs. 1-4 per share, free of Income-Tax	1,00,000	0	0
In carrying forward	31,164	10	7
Total ...	1,83,664	10	7

The jute in stock has been taken at or under cost price and the manufactured goods at contract rates.

In accordance with agreements entered into by all Members of the Indian Jute Mills Association, the Mills have worked 40 hours per week during the period and 15 per cent. of the total looms have been shut down.

With effect from the 1st November, 1934, Mills in the Membership of the Indian Jute Mills Association will work 40 hours per week with 12½ per cent. of the total looms shut down.

During the half-year although world stocks of Hessians have been reduced, values have depreciated very considerably. This is not unhealthy as it may mean the retention of a larger proportion of the world's business by Calcutta Mills. Stocks of Heavy goods remain practically unchanged during the period under review, but show a large reduction in comparison with the position at the same time last year. Prices have appreciated to a small extent. The outstanding feature in Heavy Goods has been the satisfactory demand for Heavy Cees from Burma and the Far East: on the other hand business in Australian Cornsacks has been disappointing. Prospects for the current half-year are satisfactory, but for the future are obscure being still dependant upon world trading and political conditions, which remain uncertain factors.

The Government are now taking steps to bring about a voluntary restriction of the Jute Crop. This will be no easy matter but a really determined policy supported by the united backing of the educated and monied sections of the people is in our opinion capable of achieving good results. Excessive restrictions would have a bad influence upon the world consumption of jute, but in our opinion there is little danger of the price advancing too far owing to the large visible supplies of raw material and the inherent difficulties of voluntary restriction. The Company, therefore, will cordially support the policy of Government.

The additions to Block represent the cost of flooring the Gunny Bale Godown.

E. C. Benthall, Hazarimull Doodwawalla, W. M. Craddock, Seo Kissen Bhatter, G. L. Scott—Directors.

Bird & Co.—Managing Agents.

AMALGAMATED COALFIELDS LTD.

Report for the half-year ended 30th September, 1934.

The working for the half-year shows a gross profit of Rs. 1,74,144-14-11 to which has to be added:—The amount brought forward from last half-year Rs. 18,897-4-8, making a total of Rs. 1,93,042-3-7. After providing for:—Depreciation of Rs. 49,191-15-2, reserved for taxation and Manager's Commission Rs. 33,457-4-0, general reserve Rs. 25,000, total Rs.1,07,649-3-2, there remains a balance of Rs. 85,393-0-5, which the Directors recommend should be dealt with as follows:—In payment, on application, of a dividend at the rate of 12½ per cent. per annum, free of Income-Tax Rs. 66,753-12-0, leaving to be carried forward Rs. 18,639-4-5.

Output and despatches of steam and other grades of coal as compared with the two preceding half-years were as follows:—

	Output Tons	Despatches Tons
Half-year ending 30-9-1934 ...	209,472	207,338
Half-year ending 31-3-1934 ...	213,825	213,680
Half-year ending 30-9-1933 ...	158,698	158,011

Working results.—Output and despatches have maintained the improvement referred to in our last report, demand being up to present capacity of the collieries. The electrification of Eklehra Colliery has been completed and it is hoped to bring this plant into operation during the current month.

A pumping shaft is now being sunk at Datla to centralise pumping at the Collieries there.

Shaw Wallace & Co.—Managing Agents.

INCREASING PRODUCTION

NEED FOR BIGGER DEMAND

One of the current economic trends, which has not attracted much attention, is the increase in industrial production since the beginning of April last. Nearly all the chief industries have consistently increased their output during 1934-35 ; and the figures of production for every month from April to August show a distinct rise over the level of the corresponding period of the previous year. The following table gives the figures of production for the five months, April to August :

NAME		April	May	June	July	August
Cotton Manufacturers	1934-35	52.35	49.73	52.79	60.25	61.60 (a)
(in million lbs.)	1933-34	46.06	50.12	52.05	54.08	54.92
Cotton Piecegoods	1934-35	244.6	234.0	245.5	277.5	289.0 (a)
(in million yds.)	1933-34	214.7	236.2	237.4	245.6	246.5
Jute Manufactures	1934-35	71.15	86.12	74.97	81.34	83.21
(in 1,000 tons)	1933-34	68.52	84.70	77.73	74.52	83.11
Pig Iron	1934-35	94.37	105.32	112.81	112.01	114.10
(in thousand tons)	1933-34	79.79	74.15	73.95	97.73	97.10

*Actual production of the 9 cement manufacturing concerns at work in India.

Economic statistics in India have not advanced to the point of calculating the general index of production, and in the absence of such index number, one is necessarily thrown on the figures of output for each industry. And the table above shows beyond a doubt that nearly all the industries have increased their output during the current year over the levels of the previous year. Where there are instances of production in one month being lower than the level of the corresponding period of the previous year, it will be seen that the fall has been more than compensated by a large increase in the previous months, so that, there can be no doubt that, on the whole, industrial production in India during this year has maintained itself well above the level of last year. Though, doubtless, one may welcome this as a sign of recovery, it is, nonetheless, necessary to examine how far these figures betoken a more healthy state of the national economy than we were in a position to claim during the years of the depression. The increase in internal productive activity can be welcomed only when the increase is menat to cover a short fall in imports, or is intended to satisfy a possible increase in demand. In other words, one can regard an increase of industrial production with satisfaction, only if there is reason to think that there will be an increase in the purchasing power of the country or, there has been a short fall in the supply due to lower imports from foreign countries. There has, indeed, been no reason to suppose either that the general purchasing power has increased or that imports have decreased.

We have on various occasions stressed the tendency of imports in India to increase during these months ; and this increase in imports has not been sufficiently balanced by a similar rate of increase in

the exports of this country. This lack of relation between the increase in imports and the increase in exports will duly give rise to problems in the sphere of the balance of payments and exchange. It is not with this that we are concerned in the present context. The slower rate of increase in the exports as compared with imports shows that part of the purchasing power of the country, which is derived from the balance of exports will not improve as much as one would like. And secondly, the increase in the rate of imports shows that the total supply within the country of goods which are produced in part at home, and in part procured from abroad will be greatly increased in the coming months.

Such an increase will leave very undesirable effects if the general volume of purchasing power does not improve. In countries like America the purchasing power of the masses has been improved by certain policies deliberately followed by the State. Farmers derive considerable amounts in compensation the reduction in the acreage of the principal crops. Public works programmes are taken on hand and a great deal of money is expended on this account. All this money flows into the pockets of people, who in the present conditions can be relied upon, not to put them by, but to put them into active circulation against actual purchases of consumer's goods. In India there is nothing corresponding to this activity of the State. Any increase in the general purchasing power of the people has to come about only through the expansion of industrial employment and the improvement in prices of agricultural products. There seems little reason to believe that industrial employment in India has shown any appreciable increase. It must, perhaps, be said in the first place, that the extent to which industrial employment can affect the total volume of purchasing power in the country, is very little, indeed. It is notorious that the industrial workers in India are a very low proportion to the total population and, if in conditions like these, much of the increase in production which we were now talking of is being effected through a greater productivity of the workers per hour, then it will be seen that industry as such has nothing to contribute to the requisite increase in demand for consumer's goods. As for agricultural prices, it is well-known that there has been little or no improvement, such as could enable people to put forth a greater volume of effective demand.

If the purchasing power of the people has not changed then it is essential that the supply of the various classes of consumers' goods should at least remain steady. In any case, an increase in supply must be considered to be somewhat disturbing. We have already indicated the fact that, far from there being any decline in the supply, there has been a pronounced tendency to increase. Taking the principal consumer's goods like sugar and cotton clothing, there can be no doubt that in these two instances both internal production and imports from abroad have been on the increase of late. The statistics supplied by the Department of Commercial Intelligence do not include the figures of sugar production for any month of the current financial year. It is pointed out in the footnote that the figures are not yet available. It is, indeed, regrettable that figures of sugar production should lag so far behind, but this need not be viewed seriously as the crushing season does not cover these months. But one hardly needs accurate figures to suggest that sugar production in India has been on the increase. Thanks to the last report of the Sugar Technologist, we have a fair idea of the rate at which the production of sugar in India is increasing, and only last week we drew attention to the memorandum of the sugar producers in India pointing to the increase in the imports of sugar in recent months. The same may also be said of cotton piecegoods. The imports of cotton piecegoods may be expected to go up in the near future.

It is not suggested that the increase in the internal production is a matter for regret. All that we seek to urge is, what time industrial production is on the increase, there should also be some effort on the part of the authorities to stimulate demand within the country. It is, we believe, high time that the initiation of new productive activity calculated to increase the purchasing power of the people is taken on hand. For some time we were encouraged to hope that with the lowering of the interest rates for Government's new borrowings, the capital expenditure of the State would increase to something like its former proportions. But the growing competition between road and rail has complicated the issues connected with railway capital expenditure; and Government have naturally been less enthusiastic in this regard. But it is surely up to the Government to co-ordinate the road and rail administration and initiate a comprehensive scheme of transport development, which will account for a large volume of new capital expenditure. It should also be possible to initiate new building activity. The last Census Report showed how appalling are the conditions of housing in a city like Bombay. In this context it is very interesting that Great Britain is actually undergoing a building boom; and it is apparently the intention of Great Britain that by 1951 no more than three people should occupy two rooms. If we contrast this objective of Britain's building policy with the horrid overcrowding of the slums in Bombay, we get an idea of the scope that the Indian cities afford for building programmes on a large scale. The possibilities in India are colossal in every sphere of activity, and a period in which production seems to be undergoing an automatic increase should also be the occasion for exploring the possibilities of new productive activity.

PROTECTION FOR WOOLLEN INDUSTRY

The following is a memorandum submitted by the Association for the Development of Swadeshi Industries, Delhi, to the Tariff Board regarding the question of protection to the woollen industry.

Despite its importance, the woollen textile industry in India has so long rested mainly on the voluntary support of the people who are inspired by the spirit of swadeshi. But the present Indian manufacturers of woollen goods will not long survive, as they cannot depend on purely public sentiment which is always transitory. The movement of Swadeshi is bound up with the political activities of the Indian National Congress, and therefore suffers the vicissitudes of the Congress.

For a long time Italy has been a formidable competitor, and during the years 1933-34, Japan has also jumped into the market and has made the competition extremely acute. Indian manufacturers are doomed, unless a sufficient measure of protection is granted to them immediately.

In dealing with the claim of the woollen industry for protection, the Tariff Board in accordance with the direction of the Fiscal Commission has to satisfy itself:

(*a*) that the industry possesses natural advantages,

(*b*) that without the help of protection it is not likely to develop at all, or not so rapidly as is desirable, and

(*c*) that it will eventually be able to face world competition without protection.

WHETHER THE WOOLLEN INDUSTRY POSSESSES NATURAL ADVANTAGES.

While considering this question we have to bear in mind the following four essentials constituting natural advantages for the success of an industry:—

1. Raw materials,
2. Skilled labour,
3. Capital, and
4. Market.

In India Sheep-farming is a subsidiary occupation of the agriculturists of the Punjab, Kashmere, Baluchistan and other hilly districts of almost all the provinces. All qualities of wool, ranging from the finest to very coarsest, are available. The exact figures as to the quantity of raw wool available in the country cannot be ascertained, but from good authority we learn that in the Punjab alone there are more than 4½ million sheep. In 1928-29 India exported over 6½ crores worth of raw wool. While this shows the abundance of raw material, the fall in its value to less than 2 crores shows the dangers of being an exporter of raw material. The average price of wool which in 1928-29 was 13 annas 10 pies per pound, fell so low as -/6/1 per lb in 1932-33. The waste of national wealth involved in the export of raw material is obvious.

SKILLED LABOUR

The woollen textile industry is one of the oldest industries in India. Before the advent of the machine age, India was one of the principal countries which manufactured woollen cloth, rugs and shawls, so much so, that even now, Kashmere is renowned for its shawls, and Mirzapore for its carpets throughout the world. In Kashmere, it is almost a cottage industry, and some of the finest specimens of shawls and cloth are produced from yarn spun on handlooms. There are also many concerns scattered over all the provinces where woollen cloth is produced on handlooms, and there are ten big mills having about 2,100 looms and 85,000 spindles. The mills are well organized on modern lines. During the last few years, an attempt has been made by the All-India Spinners' Association to organize the scattered skilled labour in spinning and weaving. It has been successful to a very great extent in reviving the old knowledge, which is self evident from the large range of varieties of tweeds, pachminas, shawl-cloth and putties, made by hand in different designs and qualities, which have been put on the market.

CAPITAL.

Capital in India is not shy, but the Indian capitalists would not come forward, unless there is some security offered to them against foreign dumping. It is evident from the fact that the capitalists have risen to the occasion and have very rapidly multiplied the number of the sugar mills producing sufficient quantity of sugar to meet the consumption at home as soon as protection was extended to the sugar industry. Capital in India is available and would be forthcoming if protection is extended to the woollen industry so as to give a sense of security to the capitalists.

MARKET.

In woollen textiles, the main requirements of India can be classified under the following main heads:—

(*i*) Blankets and rugs.
(*ii*) Piece goods.
  (*a*) Lighter varieties such as serges.
  (*b*) Heavier varieties such as tweeds, flannels, etc.
(*iii*) Worsted yarn for weaving and knitting.
(*iv*) Shawls.
(*v*) Carpets.
(*vi*) Hosiery or knitted goods.

In the beginning only a very limited quantity of blankets and rugs of a very high quality was imported from England for the use of Europeans or very rich Indians. But the quantity of imported rugs and blankets has gradually increased from 62,155 lbs., *i.e.*, 15,539 rugs (approximately) in 1921-22 to 5,119,678 lbs., *i.e.* 1,279,919 rugs (approximately), in 1933-34. This rise in imports is due to the fact that Italy commenced exporting to India blankets and rugs made of shoddy at cheap rates in attractive designs. During the last two years Japan has also come into the market and is making attempts to introduce inferior qualities in attractive designs at very cheap rates. This yearly increase of imported blankets and rugs made of shoddy has replaced the cheaper varieties of "Blankets" and also "Lohies" of inferior quality made on hand-looms. The rugs and blankts made by Indian mills directly from Indian wool also considerably suffered in popularity. As a direct result of this about 5,000 looms in Gujrat (Punjab), and many more all over the country, including some of the woollen mills, had to close down. The blankets and rugs made from shoddy imported from Italy and to some extent from Japan, although very beautiful and attractive, do not wear well ; and in the long run they are more expensive to the consumer than those made in India out of pure wool.

If protection is given against the import of blankets and rugs of cheap variety and specially those made from shoddy imported from Italy and Japan, the hand loom industry, which has failed in Gujrat, Kangra Valley, Kashmere, Punch Valley and Laddak Valley, and also some of the mills which have been suspended, will revive; and in the near future new factories would come into existence to meet the entire demand of the country.

PIECEGOODS.

In woollen piece-goods, so far as light goods or serges are concerned, almost all the principal countries have been flooding the Indian market with their products, and are offering a very keen competition against Indian manufacturers. The recent influx of Japanese worsted serges in the market has threatened the Indian manufacturers with extinction. Japan has taken full advantage of her depreciated exchange and organized methods of purchasing wool in large bulks. The imports from Japan in the year 1931-32, were 121,390 yds., but during the year 1933-34, the figure has sprung up to 2,090,419 yds. From what we have observed in this season in the local market, we surmise that in 1934-35, the figure will probably swell to eight digits, as from the figures available for the five months from April to August 1934, we find that out of the total imports of 3,360,400 yds., Japan's share is 2,362,824 yds.

In case of heavy qualities such as tweeds and flannels, the position is still worse. This variety of goods is generally purchased by the middle and the poor classes. The purchaser of this quality of cloth is generally less intelligent ; and consequently he finds it hard to distinguish between the pure woollen quality, which is really strong and good, and the imported goods generally supplied by Italy, which are made of shoddy or

THE BUELL PULVERISED COAL FIRING SYSTEM

British in design—British in manufacture—to use Indian coals at their maximum efficiency

The features of the Buell Pulverised Fuel System which experience has brought out in power generating plants are:—

1. RELIABILITY IN SERVICE

Resulting from the design, materials and workmanship employed, enabling plants to operate over long periods without involuntary stoppage.

2. FLEXIBILITY IN OPERATION

Resulting from the complete control of heat liberation in the furnace, following the ease of adjustment of coal and air supply.

3. MAXIMUM OPERATING EFFICIENCY

Resulting from the close control of air supply and its intimate mixing with the powdered coal—maintained consistently at a commercial degree of fineness.

4. ECONOMY

Resulting from the adaptability of the system to cheaper grades of coal, minimum heat losses from carbon in the ash and excess air.

mixed fabrics. The purchaser of this class is more easily misled by the soft touch and showy design of the foreign goods. The tweeds made in Kashmere on hand-looms out of pure wool do not find favour with him, although the latter are more durable and more serviceable in winter and at the same time a little cheaper than the former. All-India Spinners' Association at Srinagar has done much constructive work in bringing out many designs in Kashmere-tweeds and has been successful in introducing very cheap varieties of tweeds, as cheap as As. 6 per yd., (single width), to suit all pockets, but it has not attained a full measure of success because the shoddy-cloth, even though higher in value, is better finished.

LAC INDUSTRY RESEARCH

One of India's ancient agricultural industries, which has fallen into disuse, is lac, which is found in areas so widely apart as Mirzapur in the north, Mysore and Salem in the south: Sind in the west and Assam and the Shan States in the east. The main lac-belt of India is however found in the plateau of Chota-Nagpur, the north-western half of the Central Provinces and some districts of Bengal and the United Provinces. Lac dye yields a bright colour which adorned the garments of the poor and rich till in 1870 vegetable and chemical substitutes began to oust the natural product from the home market. Of late the resinous by-products of lac which were used in making varnishes and prints have found in electric, plastic, gramophone and insulation industries a big growing consumption. In view of the magnitude of this modern market attention in India's lac industry has revived and last year three Indians were sent, at the instance of the Agricultural Research Institute, to Europe to undergo a specialised training in the technique of lac treatment.

Exports

In 1888 the exports of shellac, which is lac manufactured in flake or "shell" form, were valued at Rs. 32 lakhs : but in 1908 the value had risen to Rs. 2½ crores. The following figures indicate the present position of the export trade in shellac, button lac and others kinds as compared with the pre-war period:—

(Quantity in thousands of cwts. and value in lakhs of rupees.)

Kind.	Pre-war	Post-war	1930-31	1931-32	1932-33
Shellac ...	356	356	366	297	262
Button Lac	35	14	24	18	17
Seed Lac	10	6	106	105	121
Stick Lac	5	2	5	13	4
Others ...	28	39	46	31	14
Total Qnty.	434	417	547	464	418
Total Value	220	842	314	184	124

The outstanding feature of this trade is that though the quantity of exports has remained more or less at the same level, their value has widely fluctuated in recent years as compared with the post-war period.

The principal market for Indian lac is the United States of America which usually take more than one-third of the total exports, the United Kingdom coming as a close second. During the post-war period the United States of America was the largest consumer of Indian shellac, the export of which has considerably declined owing to the shrinkage of demand especially from that country. The post-war average of these exports to the United States of America was 2,34,000 cwts. : but in 1930-31 it was 1,17,000 cwts. and in 1932-33 it was further reduced to 66,000 cwts. On the contrary the demand for seed lac seems to have greatly increased in recent years chiefly from the United States of America, which generally take more than two-thirds of the total exports of seed lac. The demand from the United Kingdom has, however, remained constant, the bulk of the exports to that country consisting of shellac. The next important buyers of Indian shellac are Germany, Japan and France, while Belgium and Netherlands are other importers of seed lac. The demand for button lac is for the present confined mainly to the United Kingdom and the shipments of other kinds of lac principally go to Germany and Belgium. Thus it seems that the demand for shellac is gradually declining and its place is being taken by that of seed lac.

Namkum Research Institute

During the course of the war it was found that synthetic substitutes in Germany were making considerable headway and that unless measures were adopted to strengthen the natural lac industry, it would also go the same way as the indigo industry and suffer practical extinction. As a result of inquiry carried out by the Government of India, an Act was passed for creating a fund to finance research work on lac by the levy of a small cess on exports of lac and a Committee was constituted to administer the fund. The Committee started an experimental plantation in 1924 at Namkum near Ranchi and in the following year, established the Indian Lac Research Institute in the vicinity of the plantation. This Institute has so far devoted itself mainly to the production side of the problem as distinguished from the manufacturing and technical side. Lac is the resinous exudation produced by a species of the inset reared on certain plants which serve as hosts for the insect. Research tending towards any improvement in the quality or quantity of lac produced hence resolves itself into a study of the insect itself and the plants on which it is reared. This constitutes the research on the production side of the problem. Lac, however, is usually converted into shellac which involves no elaborate process, but it admittedly raises the manufacturing and technical side of the problem. Research in the latter case should, therefore, endeavour to improve the methods of manufacture and of dealing with various technical problems that may arise out of the use of shellac in different countries.

The Namkum Research Institute has been doing of late work on may aspects of the production side. In the earlier stages, investigation was directed to the possibility of increasing the quantity of lac grown by extending the cultivation of host trees to other areas. Besides the Kusum tree which enjoys a widespread reputation as being one of the best lac hosts, a tree known as the Khair tree, chiefly grown in the Palamau district of Bihar, has been known to yield an excellent lac crop. Further the experiment of crossing the Kusum breed with that of the Khair tree has met with considerable success in respect of quality. Another point of importance relating to the industrial uses of lac which receives the close attention of research workers at the Institute is, as regards manuring, study of the soil conditions and a remedy of the deficiencies in the ordinary plant requirements which have no less important bearing on the quantity of lac produced than on the insects themselves. The problem of the nutrition of the lac insect is also being studied to ascertain the nature of the foodstuffs required, the kind of nutrition the insect needs at different times and the changes in the composition of the plant on which it feeds.

Substitute.

So far no actual substitute for lac itself has been discovered. But shellac is used in a great variety of trades and if, in a particular trade, a synthetic substitute for lac is found out, the synthetic resins will replace natural lac. The main advantage that the manufacturers of these substitutes have over those of the natural lac is that their trade is better organised, they realise and explore fully the value of publicity and they are further in direct touch with the consumers. Behind these manufacturers are the huge industrial concerns familiar with up-to-date methods of manufacture and marketing and the latter have now established as part of their business, laboratories where research is conducted by highly qualified scientists both to develop and extend the uses of the substitutes.

PROBLEM OF DOMESTIC FUEL

POSSIBILITIES OF SOFT COKE

Domestic fuel is a great problem now; and unless it is taken up in earnest without delay, it will grow into a grave problem. As a necessary, it is next only to food, but it takes precedence over it in most forms of preparation. To arrive at a crude idea of its immensity, we will take the census total into any unit of consumption. A pound per day per head of population is an irreducible minimum and in a year of 365 days as many pounds will be used. This works out roughly at one ton of fuel for every six heads of the population. Deducting about 5 crores of people as free users on account of their residence in hills, indigence etc., the paying section make up about 30 crores and their annual consumption at 6 per ton is 5 crores or 50 million tons. This figure roughly represents 200 per cent. of the annual total quantity of coal production in India during the 'boom' period.

Wood Fire.

Wood fire was used from the earliest days for cooking in all parts of the world. But wood has been replaced by other fuels on grounds of economy, efficiency and convenience in most civilised countries. It is high time India avoided as much as possible wood being used as fuel except under economical necessity. This is a vital question of national economy.

Any tree, however fast it grows, takes 30 years to yield one ton of firewood and trees are meant in the scheme of nature to serve better ends than making firewood. The indiscriminate use of wood as the chief domestic fuel in India has deforested both the hills and plains: so much so that the seasonal rainfall has diminished and what little of it there is left floods the rivers so suddenly as to cause immense havoc to life and property. This is due to the absence of the retaining catchment which the valuable old forests provided so well that the floods were moderate, within bounds, gradual and long-standing and helped agriculture best. It is an economic crime to cut young trees for firewood. The same is applicable to charcoal. Coal is different. It is meant to be used as fuel. It must be scientifically treated and freed from its deleterious contents to make the smokeless soft coke or coalite so popular in the grates and kitchens of England, Europe and America.

Destructive Distillation.

To get the right quality of soft coke suitable for the grate or kitchen, the coal has to be heated in a closed retort where access of oxygen is practically excluded. This is called the destructive distillation of coal ; and it can go on till all the illuminating portion of the volatiles are removed. This removal makes the coal smokeless and easy for ignition, as it automatically fixes the remaining volatile matter in the product itself in a mobile form. Care should be taken not to overheat the product, in which case it cannot be used for the kitchen, but can yet be a good fuel for raising steam etc.

The Soft Coke Cess Committee have done much valuable spade work towards popularizing coal products as domestic fuel. Their efforts, however, have hardly touched the fringe of the country ; but the manner of reception given to coal products as domestic fuel in spite of its deficiency goes to establish the crying want of an economical domestic fuel. In point of calorific efficiency, soft coke effects a saving of 50 per cent. over dry wood and can stand almost on a par with charcoal. Dry wood yields a thermal value of about 4,500 Kg. Calories or 8,200 British Thermal units on the average, while coal yields 8,000 Calories or 14,400 B.T.U. and soft coke a little less, say about 13,000 B.T. Units. Charcoal makes as much as and sometimes more than coal, but since it is twice as costly as coal or three times as dry wood, it would be suicidal to create a demand in excess of the natural supply if any. Economically and scientifically it is sounder to eschew wood of any kind as fire-wood.

Working Costs.

As to the working costs, a ton of wood costs much more than a ton of coal at pit's mouth. Over the rails, shipboard or lorry a ton of fire-wood takes more space than a ton of coal or soft coke, and transport is costlier. Owing to its high acqueous contents wood depreciates terribly in storage ; and in the case of some varieties dry storage is impossible as in their case their cellulose is dainty food for insects and worms who pick them so clean that what was once a fat faggot is nothing more than a skeleton of powder and bark. Look at the storage capacity of coal or coke. It has seen ages of storage—millions and millions of years—and man's life is but a moment in its existence. Will it pay to make soft coke out of coal and put it to kitchen use? Surely it will, for the following reasons.

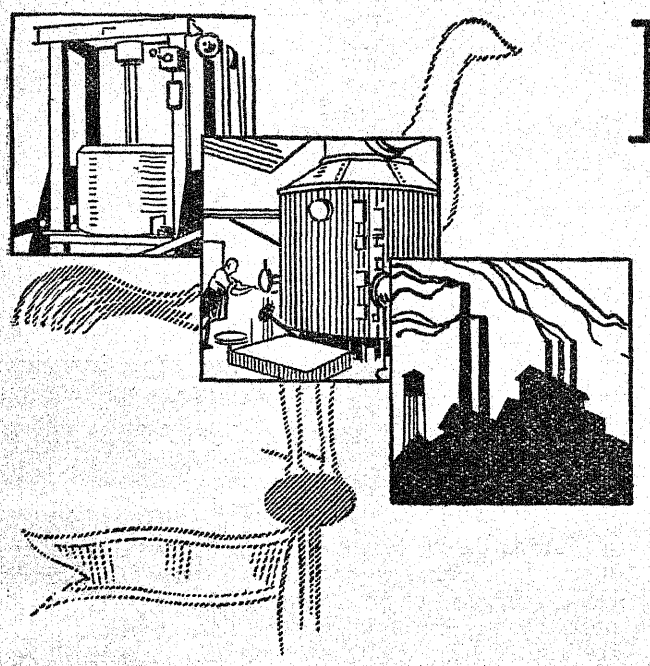
Coal seams are irregular and inconsistent in their values and qualities and more than half the raisings find no market. This non-paying moiety of the pit's production can be turned into good working soft coke. The benefit is dual, paying the pit and serving the kitchen, and tapping new wealth from the precarious coal pit. England's pit-head price is 12 shillings, American's 3 Dollars, while the Indian pithead price is Rs. 6. With its cheap labour the Indian pit-head rate should not exceed Rs. 3, the higher level being maintained because of the absence of by-product utilization.

By-products.

Science is good, but it has got a trick of mystifying and confounding things unnecessarily, thereby discounting its industrial value, whereas routine efficiency stands as a beacon for all reasonable enterprise. The by-product enterprise had a nasty set-back when the first American oil well was drilled. The old rock or shale oil went out of the market, but the by-product section in the coal area did not then sit with folded hands. They brought out their tars, ammonias, gases, domestic cokes and tar derivatives,—the most valuable and wonderful of them being the German alizarine and anilines. In all these enterprises Man owned as much to his inquisitive intelligence as to Science.

Indian coal has ever since coming into use been awaiting similar treatment. There was no response to its call in the beginning because the country was full of other above-ground fuel resources in the shape of rich forests. The housewife shall be wanting fire in her hearth till the mines are tapped and Soft Coke made in enormous quantities on practically scientific lines is popularised.

The practice of soft coke manufacture is well advanced in the West and the literature on the subject is considerable. The practical adaptability of Indian Engineering talent is remarkable in all they have hitherto attempted in other spheres of maintenance and manufacture. Soft Coke and its by-products can save the dying forest, avenue and orchard and rejuvenate the coal-pits. Here is an immense field for research.



Experts

should design and supply your Mill Machinery

Messrs. W. J. Alcock & Co. are specialists for the design and supply of Machinery and Plant. They will also supervise erection and operation whether your Factory is built for Paper, Sugar, Flour, Oil, Rice, Cotton, Wool, or Jute. Their Technical Control guarantees efficient and economical working.

INDIAN FIBRES

SCOPE FOR COMMERCIAL DEVELOPMENT

The commercial uses of fibres as a cottage industry enter largely into the social and domestic life of India, where, especially in the South, a variety of fibres is found. Apart from jute (which is a monopoly of Bengal) cocoanut, palmyra, hemp and aloe are the fibres used in the manufacture of coir, cordage, bags, mats and other simple requisites of the home. A large number of men and women are engaged in the industry, principally in the districts on the east and west coasts of the Madras Presidency, supplementing by this means their small family budget. The coir industry is said to have existed more or less in a primitive form since the 15th century. Three reasons are given why the industry has not made sufficient headway ; (1) the ignorance of some of the people as to the uses of husk, (2) the dearth of facilities for the successful extraction of fibre, and (3) the laborious processes involved in spinning. The expansion of trade with European countries in recent years has roused the cotters of Malabar to realize the full commercial value of coir and to develop the industry. Also, the west coast possesses natural facilities with the sea on the west and backwaters on the east, whereas on the east coast the manufacture of coir is very limited partly owing to the lack of back water facilities and partly to the existence of a large export trade in copra by which the husks as fibre-yielding material is allowed to diminish in value. But there are many villages in the East and West Godavari districts where the coir industry is now carried on to a limited extent and can be successfully extended by an enterprising *entrepreneur,* as there are large tracts covered by cocoanut gardens to the extent of about fifty thousand acres. The report on the survey of cottage industries published by the Government of Madras observes : "In the process of extraction of fibres the methods adopted in all the places are not uniform, depending as they do, upon the facilities available for retting. Laboratory trials have indicated that the period required for retting could be materially shortened. But the workers are ignorant of this process. It is necessary to disseminate this knowledge among them. The present process is laborious and in modern days of machinery, the absence of labour saving contrivances, such as a husk crushing machine and a coir hand twisting machine to save time and labour as far as possible, is responsible for the non-development of the industry to the extent that may be desirable."

Foreign Trade in Coir

The following figures indicate the extent of the overseas trade:—

Exports.

Value in Rs. 1,000.

Year	U. K	Empire Countries	Foreign Countries	Total
1930-31 ...	75,80	85,88	1,05,54	1,91,42
1931-32 ...	98,75	1,06,31	83,81	1,90,12
1932-33 ...	53,54	61,66	67,41	1,29,07
1933-34 ...	62,83	75,02	76,53	1,51,55
Coir Yarn.				
1933-34 ...	14,09	17,67	63,57	81,24
Coir Mats and Mattings.				
1933-34 ...	44,19	52,70	11,94	64,64

The total exports of coir manufactures in 1933-34 amounted to 961,000 cwts., as compared with 779,000 cwts. in the preceding year and 886,000 cwts. in 1931-32. The imports of coir yarn in 1933 into the United Kingdom amounted to 148,000 cwts. as compared with 216,000 cwts. in 1932 and 451,000 cwts. in 1931. India's share in 1933 amounted to 125,000 cwts. or 84 per cent. of the total imports. In 1932 India sent to U. K. 199,000 cwts., *i.e.* 92 per cent. of the imports. The slight set-back in 1933 is attributed to the proportionately large consignments of Ceylon. As regards mats and mattings, India's share in the trade was 84 millions square yards in 1933 as against 6.8 million in the previous and 53 million in 1931. In the opinion of the Ottawa delegation, while there may be some expansion under this item as a result of preference, the only advantage to India lay in the fact that it secures trade against actual or potential competition from foreign countries and maintains the position which India has acquired in the United Kingdom. As a result of the preference accorded to India the percentage of trade with foreign countries has diminished from 72 per cent. to 67 per cent., while the trade with U. K. increased from 25 per cent. to 28 per cent. and the trade with the Empire countries from 28 per cent. to 33 per cent., the net gain to India being 3 per cent.

Apart from the fact that the percentage of imports from the United Kingdom has increased consequent on the preference, nothing has been done in India to stop the annual flow of money out of India through the purchase of brushes. The Government of Madras at one time entertained the idea of establishing an industrial business. "But beyond ascertaining that rough brushes and brooms could alone be made out of these fibres, nothing tangible was done." The report on cottage industries suggests that the fibres, besides being used for the manufacture of brushes and brooms, might be found useful for various other purposes. Their utility for other purposes may be investigated by experts and means found to utilise in the Madras Presidency the enormous quantity of fibres that is now being exported overseas.

Possibilities of Development

Besides these two, there are other fibres known as Gogu, Kitta, Janapa, which are grown in Madras though not to any large extent, and locally consumed in the various districts either as commercial products, manure or fodder. The position of the fibre market will be completely changed if full commercial value and utility are found in these fibres and the agriculturist educated as to their several uses. So far as coir and cordage are concerned, not much money by way of capital is required and it would be desirable if Government were to open factories for the purpose of educating the agriculturists. The Imperial Council of Agricultural Research ought, if necessary, to open a station either in Malabar or in the Godavari Central Delta to make a research in the fibre and find out the several uses it can be put to on a commercial scale. Lastly, the Agricultural Department ought to evince more interest in this industry and see that a knowledge of the various methods of manufacture is disseminated by regular propaganda. There is no doubt that this industry will certainly create employment to large numbers of the idle able-bodied who can be made to work through proper organisations.

INDIAN FINANCE YEAR-BOOK, 1934

NOW READY

OUTSTANDING FEATURES :

1. A Concise and Comprehensive Review of India's Trade, Budget, Finance, Banking, Insurance, Transport, Industry and Agriculture.
2. Lucid Expositions and Comparative Statistics.
3. Ten-year Figures are given in most cases.
4. Over 200 Statistical Tables.
5. Where necessary, corresponding Statistics of International Value are given.

SUGAR INDUSTRY

NATIVE STATES COMING INTO LINE

A notable feature of the sugar industry is the active interest taken in the subject by Indian States. On the invitation of H. H. the Nizam's Government Mr. A. C. Srivastava, Sugar Technologist to the Imperial Council of Agricultural Research, has prepared a report on the establishment of a sugar factory in the Nizam's sugar irrigation area, in which he suggests (*a*) the development of cane cultivation to the full extent of the 20,000 acres: (*b*) erection of modern sugar factories for producing white sugar on a commercial scale, to be organised preferably on a co-operative basis: (*c*) organisation of sugar cane cultivation and *gur* making as a cottage industry: and (*d*) creation of Government organisations for assisting the industry as a whole. As large business concerns in British India have approached the Nizam's Government with their schemes, it is interesting to note that Mr. Srivastava recommends the setting up of a joint stock company to run the sugar factory and sugar estate, with an authorised capital of Rs. 20,00,000. Mysore, one of the most progressive of Indian States, has included sugar in the scope of its industrial survey. Travancore is likewise examining the possibilities of adding sugar production to its controlled industries.

Now that India has prospects of being self-sufficient in the supply of sugar for home consumption, the contribution of well-organised factories in Indian States ought to speed up the consummation. Following the grant of protection in 1932, a remarkable expansion of the industry in India has taken place. The United Provinces registered the largest increase in the number of factories in the last two years, while ten new factories were opened in Bihar in 1933, bringing up the total number of factories to 347 in India.

In the United Provinces (51.7 per cent.) the area was estimated in August last at 1,836,000 acres (including 26,000 acres for Rampur State) as against 1,791,000 acres reported at the corresponding time last year. No change in the estimate has so far been reported. The probable outturn for the province as a whole is estimated at 85 per cent. of the normal.

In the Punjab (14.7 per cent.) the area estimated up to the end of September is 476,000 acres as against 510,000 acres reported at this time last year or a decrease of 7 per cent. The condition of this year's crop is equal to 104.5 per cent. of the past 10 years' average.

In Bihar and Orissa (9.7 per cent.) the area planted is estimated at 468,000 acres as against 418,000 acres. The corresponding 12 per cent. increase is attributed partly to favourable weather at the sowing time and partly to the opening of several sugar factories in North and South Bihar. The weather conditions have been generally favourable and the condition of crop is reported to be fair. The good condition of the figure for crop is according to district returns, estimated at 88 per cent. against the past 10 years' average of 95 per cent. This means that the yield of this year's crop, is now expected to be 93 per cent. of the last year's average.

In Bengal (7.2 per cent.) the area is now reported to be 276,000 acres as against 254,000 acres, at the corresponding date of last year, or an increase of 9 per cent. as reported in the August forecast. The weather was generally favourable both for planting and germination condition of this year's crop and is practically equal to the average of the past ten years.

IN MADRAS

In Madras (37 per cent.) the area planted up to 25th September is estimated at 115,000 acres at the corresponding period of last year. The condition of crop is satisfactory, exrept in Ganjam. Vizagapatam, Bellary, Anantapur, Salem, Trichinopoly and Tanjore where the crop suffered from prolonged drought in summer and subsequent heavy rains in Ganjam and Vizagapatam and from deficient rainfall in the other districts. It has also been affected by the smut disease in parts of Trichinopoly. On the assumption that the season will be normal during the remaining portion of the growing period, the yield is expected to be 319,000 tons of raw sugar (gur) against 322,000 tons estimated at this time last year.

In Bombay (3.3 per cent.) the area is estimated at 105,000 acres (of which 69,000 acres are reported for British districts and 34,000 acres for the Indian States in the Bombay Presidency proper and 2,000 acres in Sind) showing an increase of 10 per cent. over the corresponding area of last year. The increase is attributed to the extension of the cultivation of crop on the Decan canals by sugar factories.

The North-West Frontier Province (1.6 per cent.) the area remains the same (47,000 acres) as reported in August forecast which is 10 per cent. below the corresponding estimate of last year. The condition

of the standing crop is on the whole average, and the total outturn of raw sugar (gur) is now approximately estimated at 52,000 tons as against 64,000 tons at this time last year.

In Assam (11 per cent.) the area is estimated at 31,000 acres practically the same as at the corresponding period of last year.

In the Central Provinces and Berar (0.8 per cent.) the area is estimated at 28,000 acres as against 29,000 acres in the corresponding area of last year. For the province as a whole the yield is estimated at 112.5 per cent. of the normal.

In Delhi (0.1 per cent.) the area is estimated at 5,000 acres as compared with 4,000 acres at this time last year.

In Baroda (0.1 per cent.) the area is estimated at 2,000 acres which is practically same as at this time last year.

In Bhopal (0.1 per cent.) the total under the crop is estimated at 5,000 acres, as compared with 4,000 acres in the corresponding estimate of last year.

The question of additional protection to the industry in view of the fall in price of imported sugar is under the consideration of the Government of India. The customs revenue which was earmarked from sugar in the budget for 1934-35 has already been realised in the seven months January to October and it is argued that this revenue shows that the level of protection is not sufficient. Should Government's decision not be made public soon, a deputation of sugar manufacturers, Indian and European will wait on the Finance Member to explain the seriousness of the situation.

SALT INDUSTRY

BENGAL'S POSITION

Attempts have been made since the grant of protection to the Indian salt industry (including Aden) in 1931-32 and extended thereafter year by year till April 1935 to make India in general and Bengal in particular self-sufficient in regard to salt. The climate of Bengal is not conducive to the commercial production of salt. Experiments are in progress to overcome this natural disability, which are referred to in the Report on the administration of Salt Department in Bengal during 1933-34.

MANUFACTURE OF SALT.

Three firms were granted temporary permits for the manufacture of salt as an experimental measure in the presidency on the terms and conditions similar to those on which six such permits were granted during the preceding year. Of the total nine permit holders four did no manufacture during the year under report and are not likely to do anything in future. Bengal salt manufacturers association did not themselves take up the manufacture of salt on a commercial scale and their activities were confined merely to rendering help and advice to private enterprises for the development of the salt industry in Bengal. Recently, however, the executive body of the Association have floated a limited company under the name and style of the Bengal Salt Company Ltd. with the object of starting a model factory at Purshottampur, on the sea board of Midnapore, from the next cold weather. The National Salt Manufacturing Co. have started a factory at Kagdiwip in the district of 24-Parganas and are reported to have manufactured, by way of experiment, a very small quantity of salt during the year under report. The Premier Salt Manufacturing Co., manufactured 744 maunds of salt. Out of this production, 685 maunds passed into consumption on payment of duty during the year under report.

There is a desire on the part of the people of this presidency for the organised developments of the Salt Industry and all reasonable facilities are being given by the Government to intending manufacturers. Recently three representatives of the Bengal Salt Manufacturers' Association went to Burma to study the method of manufacture there. They have come back and expect that salt can be commercially manufactured on the sea board of Bengal by the Burma method.

IMPORTED SALT.

The total quantity of salt imported into Bengal in 1933-34 was 12,328,620 maunds compared with 15,625,004 manuds in the previous year, a decrease of 21.05 per cent. Calcutta received 11,390,475 maunds or 92.29 per cent. and Chittagong 938,145 maunds or 7.61 per cent. respectively.

Duty collected on the imported salt at Calcutta and Chittagong is as follows: Calcutta 1933-34 Rs. 2,28,25,410 as compared with Rs. 2,66,68,520 in the previous year. Chittagong 1933-34 Rs. 18,68,336 as compared with Rs. 22,39,602 in the previous year.

At the commencement of the year under report, there were four licensed warehouses, viz., 1 at Chandpur, 2 at Narayanganj and 1 at Bhairab. The total quantity of salt despatched to these warehouses from ship board and Sulkia was 300,650 maunds compared with 155,100 maunds in the previous year. No salt was despatched to these or other private warehouses from Chittagong.

The closing balance in bond at Sulkea Golah was 8889,789 maunds a decrease of slightly over 25½ lakh maunds. The total importation of salt into Calcutta shows a decrease of slightly over 29 lakhs of maunds. During the year, a small quantity of salt from Madagascar was imported for the first time. It will be seen that with the exception of Hamburg and Ras Nafun, supplies from foreign ports have entirely ceased. On the other hand, importations from the Kathiawar States have greatly increased.

No licence was granted for the refinement of saltpetre and also for the manufacture of sulphate of soda. There was much unoccupied space in the Government Golahs both at Calcutta and Chittagong, partly because the quantity of salt imported was substantially less than in the previous year and partly because merchants drew heavily upon their Golahs stocks towards the end of the year, in order to avoid an expected increase in duty. The closing balance at Calcutta was only 9 lakhs of maunds of salt, which is the lowest closing balance during the last ten years and there was no balance at all at Chittagong. Duty was refunded on 81,345 maunds of salt required for commercial purposes as compared with 77,695 maunds in the previous year.

MARKETING BOARD.

At a conference of Salt Manufacturers of India and Aden held in Bombay on August 22 last, it was decided to establish a Marketing Board for the sale of salt in Calcutta, with a view to regulate the imports of salt and to raise the low competition prices in the Calcutta market for the benefit of the infant indigenous industry. A suggestion was put forward on the formation of the Marketing Board that the Board would exploit provincial patriotism by raising prices which would be a hardship on the poor, in whose meagre menu salt is a prominent item. The suggestion, however, is not sustained by the facts that the Board will have on its Committee representatives of Bengal Salt Manufacturers and that the Board will encourage manufacture in Bengal. Moreover, the Government of Bengal at the last session of its Council have renewed the assurance that every facility will be afforded to develop salt manufacture on a commercial scale in the Province.

MADRAS FACTORIES CLOSED.

By a recent Notification in the Gazette of India, the salt factories at Mukkudi, Romnad District and at Kandadu, South Arcot District, will be closed with effect from January 1, 1935.

INDUSTRIAL DISPUTES

STATISTICS FOR BRITISH INDIA

For the quarter ending June 30, 1934, Bombay heads the list of industrial disputes, with 31, in British India, involving 122, 706 workers, according to official statistics. The number of days lost in that province as a result of disputes was 2,910,280. Bengal, with six industrial disputes in her province involving 5,619 workers and 102,745 days lost, comes second. Bihar and Orissa had five disputes in her province involving 5,918 workers. The number of days lost was 42,542. Assam and Madras had three disputes each involving 1,960 and 308 workers, respeitively. Delhi had two disputes involving 5,450 workers, while Ajmer-Merwara, Burma, the Central Provinces and the Punjab had one dispute each involving 145, 283, 7,000 and 821 workers.

Of all the disputes in the Provinces, one out of five was successful in Bihar and Orissa, while nine out of 31 were successful in Bombay. All three disputes in Assam were unsuccessful, while four out of six in Bengal, two out of five in Bihar and Orissa, 21 out of 31 in Bombay, one out of one in Burma, the two in Delhi and two out of the three in Madras proved unsuccessful.

The total number of disputes in the whole of British India was 54, involving 150,210 workers. The number of days lost was 3,441,187.

WORLD OF INDIAN FINANCE

Friday, Decr. 6.

The money market has blown strangely hot and cold during the week. Though the whole of last week was a period of heavy glut of funds, Wednesday suddenly witnessed a very sharp squeeze, as a result of which funds were unobtainable even at the high rate of 3 per cent. But the stringency died down almost as fast as it developed ; and Thursday saw a sharp setback and money was on offer at 1½ per cent. at the end of the day. And as we write, Friday's rates have come down nearly to the level of last week and are quoted only 1 per cent. This meteoric flight of money rates can be attributed only to a very temporary maladjustment in the incomings and outgoings of financial institutions ; and when that maladjustment was set right, the market has again relapsed into a state of chronic excess of funds. Despite the stringency caused in the middle of the week, the more knowing sections of the market could see that the squeeze for money was a highly transient phase and that nothing had happened to interfere seriously with the condition of excess of funds over demand.

That easy conditions persisted up to Tuesday may be seen from the fact that the applications for the week's auctions on Treasuries amounted to over Rs. 2½ crores and the average rate of accepted tenders came down fractionally to Rs. 1-6-11 per cent against Rs. 1-7 per cent. in the previous week. Sales of intermediates between November 28 and December 3 dropped Rs. 65 lakhs against Rs. 179¼ lakhs in the previous week. The drop is attributable, in part to the reduction in the tap-rate from Rs. 1-6 per cent. to Rs. 1-5 per cent., and in part from the fact that the last two days, on which Treasury Bills were on tap, belonged to this week and that it is quite possible that the coming stringency had begun to be felt very early this week. Now that the tap-rate of Rs. 1-5 per cent. has been continued for this week also, the lower rate would not seem so novel to the market and funds may be more ready to be coaxed into Treasuries than they were last week. It is also noteworthy in this context that according to our calculation the Treasury must have paid out over Rs. ½ crore by way of excess of maturities over sales. There is an additional amount of Rs. 1½ crores due to mature on December 7, and if this offsets the payment which the market has to make to-day to the Treasury on account of Tuesday's auctions, the market would still be in a position to take more of Treasury Bills on the days for which Treasuries are still on tap.

The improvement in the ways and means position of the Government divulged in the last statement of the Imperial Bank of India deserves to be noted. It will be remembered that in the first week of November Government felt obliged to resort to the Imperial Bank for a ways and means advance of Rs. 3 crores ; and this has increased in the week ending November 16 to Rs. 4 crores on account of the interest payments and on account of the excess during that period of maturities of Treasury Bills over sales. And this amount was reduced in the two subsequent weeks, with the result that at the end of November the ways and means advances to the Government of India stand in the weekly statement of the Bank at Rs. 2 crores. It is doubtful if the Government can continue further their task of reducing the advances they have taken from the Bank. For on December 1 the Government would hae had to meet the usual early-month disbursements. It is also to be noted that during this week the Government have bought from the market the full amount of £1 million sterling for which they will have to pay nearly Rs. 1 1/3 crores to the banks. There is also the fact that during this week the sales of Treasury Bills leave a small margin of maturities to pay off. One might, therefore, expect that the Government would have to increase the ways and means advances and that the next statement will show the effects of this procedure. Unless the Government are prepared to allow a very large cut into their balances with the Bank which stand in the statement of November 30 at Rs. 7.49 crores, it is difficult to see how the necessity for an increase in ways and means advances could be avoided.

Government securities have had another week of big strides towards high levels. And as in last week so in this, Friday has proved to be another landmark in the march of giltedge. At the close of to-day's trading 3½ per cent. paper is quoted Rs. 97-6,

so that within a week paper has put on a full point and more. And it is significant that this rise has been achieved in the face of very stagnant conditions in the London giltedge market. While 3½ per cent. sterling is quoted only £95½ exclusive of the half-yearly interest payment, 3½ per cent. Rupee Paper has shot up to over Rs. 97. It will be seen, therefore, that even if allowance is made for the half-yearly interest payments on 3½ per cent. sterling, the corresponding Rupee security has got well over the sterling security. This is an almost revolutionary change, considering that the Indian giltedge market has for years followed the London market at a respectful distance. Or, to change the metaphor, it has been taking its cue every time from London; and even when the intrinsic position of the Government of India's credit and the giltedge market came to be better understood amongst operators and investors in India, the Rupee securities would not come abreast of the London market. The position was very much like that of an actor, well prepared for his part, but ever darting glances at the side curtain for promptings of which he did not stand in need. Only in the last fortnight was the gap between the prices of Rupee and Sterling securities closed by the vigorous advances made by the former. And now we have got to the stage at which 3½ per cent. Rupee Paper is quoted a full point above the corresponding sterling security.

The feature of the week is that not only have the prices of Government securities risen, but there has been a phenomenal volume of business put through. It is reported that Bombay has been buying from this City on a very large scale and Calcutta has been meeting freely the demand for scrips. This shows that Bombay has kept for a time a highly overbought position. And that this overbought position can be liquidated without causing a setback is another testimony, were it needed, to the strength of the Government securities market. As for the medium-dated securities, a goodly volume of business is reported to have been done by way of converting the 5 per cent. 1939-44 and 5 per cent. 1940-43 into 5½ per cent. 1938-40. There are also sellers of 1947-50 at Rs. 102-12 and 3 per cent. 1941 at Rs. 100-12. It will be seen that the current yield on 5½ per cent. 1938-40 at the ruling rate of Rs. 109-6 is as much as 5.028 per cent.; and it is natural that scrips like 3 per cent. 1941, which yield under 3 per cent., should be sold for purposes of conversion into securities with a higher yield.

The present tendencies in the giltedge market in India lend great point to the idea sponsored by *Indian Finance* that the Government of India should from now set the conversion of 3½ per cent. paper to a lower interest basis as the principal aim of their credit policy and to work towards that end. We are gratified to find that the idea has attracted attention and that, whatever may be the ultimate decision of the Government of India, this question will be in the forefront of the public. It has been suggested that the volume of 3½ per cent. paper outstanding is so large that the Government cannot lightly contemplate the contingency of having to find the money for repaying them. It is true that 3½ per cent. paper issued at various times represents a big part of the total debt of India. But no one, who has followed the history of the conversions effected during the last two years, would believe that in tasks of this kind the amount to be converted is a very serious factor. Much depends on the manner in which the authorities prepare for the final event. A Government, determined, as the British Government was in 1932, to secure substantial economies for the nation by the reduction of interest charges, should always know how to create the conditions in which the conversion of loans into lower interest basis would be so automatic as to be inevitable. To give place to vague fears in matters of this kind would indeed be fatal. In fact, as Eavesdropper pointed out in his last week's gossip, the need is to think big and act big. The control, which the Indian Treasury exercises over the Indian money and capital markets, is by no means less able or less effective than the control which the British Treasury exercises over the London market. The only difference lies in the fact that the Government of India often feel surprised by the height of their own credit.

There is, however, one factor to which attention has been drawn in the comments of a contemporary. Though money rates may be persistently downward, the credit of the Government of India cannot be assumed to keep pace with it in the future. Reference is made to the possibility that the advent of the new Reformed Government might be felt to be disturbing to investors in Government securities; and that this apprehension might arrest the rise of the prices of Government securities and even give them a rude setback. It is, indeed, strange that little or no value is attached to the safeguards devised by the White Paper and the Joint Parliamentary Committee for preserving the integrity of the financial administration in India. Apart from the question of whether the future administration of this country would require such safeguards, this devise has possessed in the eyes of foreign investors in the Government of India's securities a special value, which it would be flying in the face of facts to deny. Time was when every gesture of the British Government in respect of India's political aspirations caused a setback in the prices of Government of India's securities in London. This was, no doubt, to a large extent engineered; but there was also an amount of genuine apprehension that a purely Indian Government would jeopardise the finances of this country. But those fears have been lived down even in London. The Indian investor never shared such fears; and to the extent that the British investors believe in the adequacy of safeguards, it may be taken for granted that confidence in Government of India's securities will continue as strong

* Market closed.

Thursday evening.

The feature of the week in the sphere of the international exchanges is the decline in sterling. The British currency has lost both against the dollar and against the franc. The London-New York rate has declined from about 4.99 at the end of last week to about 4.94 at the end of Wednesday. The sterling-franc rate too has shown a similar decline from 75.53 to 75.19. The sterling price of gold has registered the changes in the international exchanges, having gone up from 139sh. 6d. to 140sh. 11d. during the period under review. Doubtless, a number of forces have been at work to bring the decline in sterling after its hectic rise about a month ago and the comparatively steadier conditions that prevailed for a fortnight. If one might judge from the reports appearing in the Air Mail papers, there is a distinct possibility of the last remnants of the commercial demand for dollars having exerted its influence on the external value of the sterling. But this is bound to be a very temporary and altogether weak force. The changes in the international exchanges have of late to be traced to other than purely commercial causes. We are now passing through a period of reaction from the extreme nervousness which was felt some time ago in regard to the prospect of the Continental gold currencies. It is the mark of recent international financial history that the crises, whenever they occur, are due to purely transient causes. In the recent instance, the nervousness in regard to gold standard currencies have been, singularly enough, the Cabinet crises in countries like France and Belgium. In the case of France, the ministerial crisis did not continue in that protracted manner which has always been characteristic of political troubles in that country. Though from the manner in which M. Doumergue was called to office, one would have thought that his sudden retirement would be the cause of great upsets in the internal political situation, his replacement by M. Flandin was achieved very quietly ; and this, added to the reiteration of M. Flandin's faith in the financial policies of M. Doumergue, brought about a revival of confidence in the position of the franc.

In the case of Belgium, the nervousness was distinctly of a more serious kind. Belgium has always been the weakest link in the chain of the gold standard currencies. Her internal position is not believed to be equal to the strain that must develop soon. But the knowledge or rather the report that America had lent assistance to Belgium to maintain her currency was responsible for arresting the rot. The Air Mail papers report that the transactions recently carried out between America and Belgium have been much misunderstood, and that what is believed to be a credit from America to Belgium was really of the nature of allowing the latter country to take payments against gold in transit from Belgium to New York. This report has not the same unsettling effect that would be expected when the market suffers some disillusionment about the nature and the strength of the support behind a threatened currency. For in the position as it obtains today, specific measures of this kind do not seem to make much of a difference. Whatever America may, or may not, have done by way of helping Belgium to continue on the gold standard, the fact remains that America is interested in maintaining the gold standard countries, at the present parities. And for this purpose she has been prepared to employ the resources of her Exchange Equalisation Fund. There is ample evidence to show that after the last few months the American authorities have been at various times lending support to the franc and the other gold standard currencies. The European gold currencies have persisted at the gold export points for a long time ; and shipments of gold from Europe to America have been heavy and frequent. But the support, which America has lent to the gold currencies, has also increased their value in terms of sterling. And it is significant that such support has continued even after the original causes of the crises in the gold standard currencies have disappeared. Both France and Belgium have lived through their ministerial crises and are in possession of Governments which have every semblance of stability. In such a position, it is only natural that sterling should suffer a setback and show signs of decline in relation to the franc and the dollar.

Neither the decline in sterling, which has occured this week, nor the stability of the international exchanges in the fortnight preceding, can alter the essentially unstable character of international finance and currencies during the period under review. It is not a little significant that discussions in regard to the intentions of President Roosevelt are reappearing in the columns of the London financial press. It will be remembered that since the first attempts of the American Government at refinancing in September, the question of a further devaluation of the dollar has receded into the background. It was taken for granted that for a number of reasons a further devaluation of the dollar was not part of American politics. Even President Roosevelt was thought to have become "banker-minded," that is, averse to new monetary experiments and inclined to give a trial to the orthodox policies. On that supposition, it was reasonable to expect that no major upsets would be caused in international finance for some time to come. But now the question seems to be broached again. And it is difficult to define the reason. Possibly, there is a growing feeling that, whatever America might, or might not do, the gold standard countries have their problems on their hands and cannot afford to defer indefinitely their solution. For the moment, France has left behind the fears of imminent devaluation. We are told that M. Reynaud's agitation for devaluation has missed fire, that the arguments in favour of that course have not carried conviction to a nation of rentiers, that the Government consisting of hardened supporters of the gold standard is firmly established and that France will not consider the question of devaluation except when she is forced to do so by the precipitate action of other countries.

So far as America is concerned, we have to reckon with the possibility of the new Congress trying to reclaim Mr. Roosevelt for go-ahead monetary policies. It is very important to note that when Congress meets next January, it will be meeting at a time when the general economic conditions will be distinctly worse than they are now and when faith in further devaluation will be stronger. While it may be a matter of doubt how Mr. Roosevelt will respond to the demands of the Congress, it is certain that there will be a swing of popular opinion again away from the orthodox monetary policies. As for Belgium, the news reports during the week show that Belgium has been canvassing opinion amongst the nations on the question of devaluation. In this context it may be noted that the Cabinet which was constructed after the recent

PUBLICATIONS OF THE LEAGUE OF NATIONS

JUST OUT ; "STATISTICAL YEAR-BOOK OF THE LEAGUE OF NATIONS" 1933-34

270 pages ... ... in wrappers Rs. 6 14 0
in cloth Rs. 8 8 0

This is the most complete and authoritative international compilation of official statistics regarding the economic, financial and social activities and the population of all the countries of the world.

These statistics including Vital Statistics, Labour Conditions, Production, International Trade and Balances of Payments, Transport, Public Finance, Monetary and Banking Statistics, Prices, Conversion coefficients for weights, measures and currencies, have been brought up to the end of 1933 or the beginning of 1934 and have been reduced, whenever desirable, to a common measure.

The present edition marks an improvement on its predecessor in the abundance of its information on various matters of great topical interest, such as public finance and the distribution of population by age, groups and occupations, etc. Another new feature consists of the tables on the production and use of nitrogen and of index-numbers of employment.

"REVIEW OF WORLD TRADE", 1933

A presentation and analysis of world trade in 1933 — about 60 pages ... ... Price Rs. 1 12 0

This volume compares the trade of the world of continental groups and of individual countries in 1933 and in recent years. It shows the contribution of each country to the total, the changes in the direction of trade and in the relative importance of the groups of commodities of which it is composed. The analysis demonstrates that, while the value of trade diminished again in 1933, the quantum increased, mainly owing to the larger exports of raw materials; exports of manufactured products were, however, also slightly higher than in 1932. Special attention is devoted to the trade in the most important crude materials and foodstuffs. An annex contains revised indices of the prices and quantum of the trade of individual countries.

MOTIVELESS MALIGNITY?

Comment on those portions of the Report of the Joint Parliamentary Committee, which refer to finance and trade, may, in a certain view, be regarded as a "special responsibility" of *Indian Finance*. And if we have not been prompt in our criticism of this section of the Committee's proposals, the delay may be attributed by the sympathetic to an anxiety for just comment. The Committee point out in the report, that the questions which come within the scope of what are commonly known as safeguards have been "a focus of misunderstanding." And they have endeavoured to dispel, as far as it may be consistent with the proposals they have put forward, such misunderstanding. But more than misunderstanding, the principal difficulty seems to be that passions have been given free reins; and the inevitable effect of raging passions is the denial on each side of the good intentions of the other, the exaggeration of suspicions even beyond the point at which they are, in fact, entertained—not to speak of their actual justification—and the multiplication of the obstacles in the path of genuine mutual understanding. In fact, "safeguards" have fouled the whole atmosphere of Indo-British relations. The hasty winding up of the second Round Table Conference, the breach with the Congress and its relapse into Civil Disobedience may all be traced directly to the advent of "safeguards" in the plans of British politicians. The Joint Parliamentary Committee observe with an impressive air of judicious impartiality that safeguards are misunderstood in Britain and India alike, that they are neither "an ineffective rear guard action masking a position already evacuated", nor a "selfish reservation of power, inconsistent with real responsible government," but a retention of power in the head of the constitution. The analogy of other free constitutions is, no doubt, potent in argument. But the differences between the power of the President of the United States and the powers which the safeguards will vest in the Governor-General ought to be even more significant. The Committee are correct in saying that safeguards are not "an ineffective rear guard action". But the truth is they are a strategic point from which the movements of the enemy can be controlled, prevented, or rendered innocuous.

* * *

The tragedy of the present situation is that the martial analogy would not seem to be out of place. If the chronological sequence of ideas is a clue to the motive behind them, there is much behind the safeguards that is bellicose in spirit. So far at least as what are known as commercial safeguards are concerned, the Simon Commission dismissed as impracticable the idea of statutory safeguards. When the Labour Government in Britain and Lord Irwin in India seemed disposed to discuss and treat with the Congress, the outcry for safeguards was mellowed. The Pact between Lord Irwin and Gandhi made reference to safeguards designed in the interests of India. Then came the significant addition: "and Britain". And now we have the supercession instead of mere addition. If, as the Joint Parliamentary Committee suggest, there is a true analogy between the powers of the American President and the Governor-General in the new constitution, then it follows that the safeguards will have to be solely in the interests of India; and the change in the phraseology would be hardly necessary. For the American constitution provides no manner of safeguards for foreign interests except the goodwill of the great American nation. And it is not unnatural that Indians should attribute the difference to the strength of the other party concerned.

* * *

For our present purpose, however, that is beside the point. What we seek to bring out is the difference between the reserve powers of the head of the State, which are common to all constitutions, and the safeguards which the British Government propose to devise against the authority which all popular legislatures exercise over the affairs of the nation. The Joint Parliamentary Committee must recognise that, after all the ingenious use they have made of the extraordinary powers of the President in America and the Crown in Britain, there is a large mass of special powers which they have recommended and which can be defended only by unconvincing allegations against the capacity and goodwill of the Indian politician.

* * *

Has there been much reason to doubt the capacity or the goodwill of the politicians in India? The Joint Parliamentary Committee themselves have some compliments to pay to the elected members of the Assembly during the Mintford regime; and it should not be forgotten that much of the criticism that is usually made against the actions or policies of Indian politicians springs from essential differences in viewpoint. Though we do not deny that some of the politicians in India have of late shown signs of active illwill towards Great Britain, Britain must admit that there is in the vast majority a fund of goodwill, which can be increased when an adequate measure of responsible government is granted to India and Indo-British relations regain their essential cordiality. Above all, there is the personality of Mahatma Gandhi, to whom truth and justice are ever dearer than the economic or political advancement of India; and it is a pity that there is no appreciation among the British politicians of the grace and spontaneity with which he recognised the iniquity of certain forms of discrimination. We doubt whether British politicians are as incredulous about the good intentions of India in this regard as they profess to be. We suggest that these suspicions have been magnified only on a perception of the necessity of placating a section of extremist opinion in Great Britain. Far from fulfilling its permises in full, British statesmanship had to go back on them to satisfy the insistent demands of this small but powerful minority.

* * *

The policy of the Joint Parliamentary Committee has been all along to grant the demands of

the reactionaries without conceding the grounds on which they are based. The whole language of the report is one of cloyingly sweet reasonableness. Nowhere do they urge that Indian politicians intend to harm the true interests of Great Britain; and so far as we are aware, there is not even a reference to the Haji Bill which was the occasion for the raging campaign for commercial safeguards. On every question they mark off a broad commonground between opinion in Britain and opinion in India. They concede with apparent generosity that Indian politicians do not lack goodwill or capacity. They are not haunted by the fear that Indians are panting for opportunity to injure Britain's commercial interests. They assure us that Britain has no desire to fetter the hands of the Indian Legislature in the matter of the economic development of the country. But all these have no place whatsoever in the final recommendations. Not even in inconsequential details have they deviated from the proposals of the die-hard advocates of commercial and other safeguards. In fact, the Committee have elaborated the whole theme, and added new forms of discrimination and new safeguards thereagainst.

* * *

Hitherto the chief object of the agitation for Commercial safeguards was to render it impossible for the future Indian Government to legislate on the basis of discrimination against British nationals trading in India. It was later extended to cover administrative discrimination also; and this is only natural for, if the possibility of unjust discrimination is conceded, and if it is possible for the party concerned to prevent such discrimination, then their efforts may well be directed as much to administrative as to legislative discrimination. The Joint Parliamentary Committee have added a third category, namely, discrimination against British trade with India. In its new form, discrimination may, therefore, be divided into discriminatiin against British trade in India and discrimination against British trade with India. The former is divisible further into administrative and legislative discrimination. According to the Joint Parliamentary Committee the need for safeguarding British trade with India arises from the fact that "with the passing of a new Constitution Act on the lines of the recommendations which are made in this report, the Convention (the fiscal autonomy convention) in its present form at all events will necessarily lapse; and unless the Constitution Act otherwise provides, the Federal legislature will enjoy complete fiscal freedom with little in the nature of settled tradition to guide its relationship in fiscal matters with this country. The difficulties which would be likely to arise from this uncertainty would, moreover, find a fruitful source to increase in that atmosphere of misunderstanding to which we have alluded." And they take the view that appropriate provisions in the Constitution Act may serve the double purpose of facilitating the transition from the old to the new conditions and of reassuring sensitive opinion in both countries." Their recommendation is that "to the special responsibilities of the Governor-General enumerated in the White Paper there should be added a further special responsibility defined in some such terms as follows: 'The prevention of measures, legislative or administrative, which would suject British goods, imported into India from the United Kingdom to discriminatory or penal treatment.'

* * *

As for legislative and administrative discrimination against British trade in India, they recall the resolution of the Second Round Table Conference "to the effect that there should be no discrimination between the rights of the British mercantile community, firms and companies, trading in India and the rights of the Indian-born subjects." They accept the proposal in the White Paper "that the Governor-General and Governors in their respective spheres should have imposed upon them a special responsibility for the prevention of discrimination thus enabling them, if action is proposed by their Ministers which would have a discriminatory effect, to intervene and, if necessary, either to decline to accept their advice or (as the case may require) to exercise the special powers which flow from the possession of a special responsibility." And it is added as an improvement on the proposals of the White Paper that "it should be made clear in the Constitution Act that this special responsibility extends to the prevention of administrative discrimination in any of the matters in respect of which provision against legislative discrimination is made under the Act."

* * *

It would be necessary at this stage to refer in detail to the points to which these provisions against discrimination are intended to apply. Suffice it here that the powers which the Constitution Act will vest in the Governor-General to prevent discrimination are far wider than the original sponsors of this agitation could have hoped for or even desired. And these elaborate safeguards are not inconsistent with the admissions and explanations made by the Joint Committee that one wonders what is really their purpose. In defining the scope of the provision against discrimination against British trade with India, the Committee observe that

> It should be made clear that the imposition of this special responsibility upon the Governor-General is not intended to affect the competence of his Government and of the Indian Legislature to develop their own fiscal and economic policy; that they will possess

> complete freedom to negotiate agreements with the United Kingdom or other countries for the securing of mutual tariff concesions and that it will be his duty to intervene in tariff policy or in the negotation or variation of tariff agreements only if in his opinion the intention of the policy contemplated is to subject trade between the United Kingdom and India to restrictions conceived, not in the economic interests of India but with object of injuring the interests of the United Kingdom.

It is, therefore, clear that the Committee do not intend that the Governor-General should have power to interfere with the authority of the Indian Legislature, when its proposals are calculated to advance the interests of India. If the Governor-General exercises his powers in strict accordance with the principles laid down in the Report, he cannot consider himself competent to interfere in any attempt of the Legislature which is calculated to help the development of this country. India would be free to levy duties, to adopt quotas, to negotiate trade treaties so long as it can be made clear that such action is not conceived solely with a view to injure Britain and not advance the interests of India. There is, however, one significant modification of this principle in the case of trade relations with foreign nations. The Committee conceive that the trade relations of India and Britain would rest on the basis of a reciprocity closer than is usually understood, by reason of the partnership in the Empire. They observe, therefore,

> The conception of reciprocity does not preclude either partner from entering into special agreements with third countries for the exchange of particular commodities, where such agreements offer it advantages which it cannot obtain from the other ; but the conception does imply that, when either partner is considering to what extent it can offer special advantages of this kind to a third country without injustice to the other partner, it will have regard to the general range of benefits secured to it by the partnership, and not merely to the usefulness of the partnership in relation to the particular commodity under consideration at the moment.

We call this observation a modification of the principle originally enunciated. It should not be difficult to see an element of inconsistency between the two. For it is not unlikely that in arriving at a trade agreement with a foreign country and making the best of it, India might find it necessary to transfer her custom in a particular line from Great Britain to, say, Japan or the United States. Such action might conceivably further the economic interests of India and thus be outside the scope of the special powers of interference conferred in the Governor-General. The last excerpt from the Report would suggest that even in such cases the Viceroy would be entitled to interfere and render such agreement nugatory. Though we do believe that the necessity for such transfer of India's custom from Britain to a foreign country would not arise often, we believe the power to distribute our import trade as we like is the very basis of negotiations for a trade agreement. With such provisions as part of our accepted laws, India, we are sure, would have very little of trade negotiations to conduct, for foreign countries cannot be blind to the futility of treating with a country which is not a free agent.

* * *

This modification of the original principle is, however, not very material ; and it would be straining at a gnat after swallowing a camel, if one were to acquiece in the safeguard and protest against the modification in regard to the principles of its application.

* * *

There are two different lines of criticism against the provisions regarding British trade with India. One is against the easy assumption that there is in India an anxiety to hit Britain even when she has little to profit by it. We cannot see how India comes to be suspected of such motiveless malignity. The ostensible origin of the demand for commercial safeguards is the Coastal Reservation Bill. But even its worst opponents cannot contend that it was inspired by a burning desire to harm Great Britain. It was due to the anxiety to stop the drain of wealth from this country and to strengthen Indian economy at one of its weakest points, national shipping. In fact, there has been no proposal yet in India which is calculated solely to injure British interests without a legitimate gain for India to compensate for it. And the suggestion that India is capable of embarking on such measures in the future is altogether understandable, unless its authors have a disquieting feeling that India has cause to be vindictive towards Britain, a most damaging confession to make, even if it is only inferential and implicit. Far from there being a motiveless malignity or justifiable vindictiveness, India has the best intentions towards Great Britain. There are many points at which the trade of the two countries is so complementary that neither can contemplate the disturbance of present relations with indifference. And during the last decade, India has developed an ethics, which admits of no differences between the nation and the individual, an ethics composed of Christian forbearance and forgiveness.

* * *

And if one is to escape the conclusion that the safeguards are designed to be a purposeless humiliation for India, one can only assume that they are meant to fetter the freedom of India to seek her economic development. For in the last resort every measure of the Indian Legislature will depend for its final passage to the Statute Book on whether the Governor-General thinks it is conceived in the interests of India.

And we submit that where the interests of Britain are also involved and adversely affected, it is too much to expect that the Governor-General would not be swayed by considerations for British interests. Nearly every measure that India might think of in the interests of her economic development will have unfavourable reactions on Britain. For where British and Indian industry tend to overlap, as they do now in some spheres, the Indian Legislature will have to initiate special measures and the safeguards will be an effective stumbling-block.

* * *

We believe we see in the Report of the Joint Parliamentary Committee a tinge of suspicion cast even on the Governor-General. For the Committee recommend that "the Instrument of Instructions to the Governor-General and the Governor should require him, if in any case he feels doubt whether a particular Bill does or does not offend against the intention of the Constitution Act in the matter of discrimination, to reserve the Bill for the signification of His Majesty's pleasure." Who can doubt that the Ministers who would signify His Majesty's pleasure would view the question from the standpoint of Britain and not India? The significance of the last recommendation lies in the fact that it completes the scrapping of fiscal autonomy.

* * *

We may now turn to the question of discrimination against British trade in India. On this question, it is necessary to keep separate the constitutional issue from the questions of policy, economic and otherwise. The Joint Parliamentary Committee have done well to emphasise the broad common ground. We ourselves believe that orderly development of economic resources require that all the agencies, which have till now co-operated in the task, ought to continue to do so. In this context it is significant that, as a matter of fact, there has been a strong tendency of late for British and Indian businessmen to come together in the conduct of commercial enterprises. No consideration has been given to this tendency in the recommendations of the Joint Parliamentary Committee. It may be asked why India should protest against the safeguards in this respect, if she has no intention of harming British Nationals. And such a question cannot be answered, except on the basis of a clear understanding between ordinarily discriminatory measures and those which are necessary for the conservation of national resources. The Joint Parliamentary Committee ought to have recognised in this sphere a distinction analogous to that which they have made in the matter of British trade with India, namely, measures which are intended only to harm Britain and those which will be of substantial benefit to India.

* * *

It is urged that all that the Britishers ask for is only a fair field and no favour. This sounds quite reasonable. But the question is whether a backward country can afford to give a fair field to more advanced nations. The essence of economic development in such cases consists in the elimination of the inequalities of competition. And all that the Britisher or, for the matter of that, any other national can claim is that he should not be penalised merely for being a foreigner. The formula which Mahatma Gandhi suggested at the Round Table Conference is an equitable *via media* between the two extremes.

* * *

A study of the whole question of commercial safeguards would lead any one with an open mind to the conclusion that they are not matters to be shut up within any statutory formula, however ably drafted. The correct solution requires a diligent search into the various forms of discrimination and sifting the just from the unjust. The cases in the borderland must, doubtless, be numerous ; and impartial judgment must, indeed, be very difficult to arrive at. The incorporation of safeguards in the Constitution Act and their administration solely through the discretion of the Governor-General are bound to aggravate the evil which they are meant to ward off. The real and abiding solution must be found in the evolution of principles and rules, which will command the support of responsible opinion in both countries and which will be accepted by the Legislature as binding on its legally unrestricted authority.

* * *

We are glad to find that, in spite of their going whole-hog in the matter of safeguards, the Joint Parliamentary Committee have envisaged the possibility of an Indo-British Convention on these matters. We are certain that practical statesmanship in both countries will be fully equal to the task of evolving such a set of principles which will be applied in all cases in which British trade, whether with or in India is likely to be adversely affected. And such a convention will solve more problems them mere commercial safeguards. Let us hope that the present recommendations are not the last word on this subject.

INDIAN PORTS: OLD AND NEW

India's long coast line as we were taught in our schools, does not make for a wealth of ports ; and the whole of India's sea-borne traffic is accomodated in the five major ports at Calcutta, Bombay, Karachi, Madras, and Rangoon. Vizagapatam and Cochin are new additions with their possibilities in the near future ; and Chittagong is first of the subsidiaries.

Geographically and commercially Bombay possesses advantages which have made it one of the world's great sea-ports. It is contiguous to the sea, has a local market of great importance and a big hinterland with excellent centres for the collection and distribution of merchandise, indigenous and imported. The Report of the Bombay Port Trust for 1933-34 reviews the reactions on the Port of local and world influences. Compared with 1930-31, 1931-32 and 1932-33, which registered the depths of the general trade depression and local political and communal unrest, 1933-34 showed signs of recovery. Taking the port as a whole, the financial results of the year was practically an equilibrium between revenue and expenditure. There was an increase of 583,000 tons over the previous year's figure in exports and imports, while the tonnage of vessels berthed was greater by over 400,000 net registered tons. A feature brought out in the report is the diversion of trade to Kathiawar Ports, which have been developing of late, causing considerable loss to the Bombay Port receipts. The revenue and expenditure for the six years ending March, 1934, indicate a big fall in revenue with the same level of expenditure. One of the main causes which have contributed to the shrinkage of revenue was the Town Duty, which has been abolished from 1st April, 1934. From 1920 the Town Duty was responsible for despatching large consignments of cotton by country craft to coastal ports for overside transhipment at the Docks, instead of railing them direct to Bombay, involving a substantial reduction in the Port's receipts. The Report quotes the assurance of the Government of India "to do all in their power to ensure to the Port of Bombay conditions of fair and equal competition with other ports."

* * *

The financial year 1933-34 marked a serious deterioration in the volume of overseas traffic passing through the Port of Calcutta. Two factors have contributed to the dterioration-firstly, the low railway rates for transport between Calcutta and Bombay and, secondly, Chittagong's increasing absorption of trade. The railway rates are in some cases less than a quarter of the rates charged on the same commodities carried over equal distances to the interior—an incongruity which the Commissioners for the Port of Calcutta Sligmatise as "dumping." And what was five years ago the monopoly of the Calcutta Port is steadily shifting to Chittagong. Vizagapatam is also cutting into preserved of Calcutta and Madras, so that the administration of Calcutta's Port, from the point of view of revenue, is up against adverse conditions.

* * * *

The Port of Madras acquires its commercial position from the valuable shipments of oil seeds, hides and skins from the whole of South India. With the easing of trade depression, these commodities are regaining their place in the export trade of India and the Port of Madras could have looked forward to prosperity but for the growing competition of minor ports like Tuticorin and Pondicherry and Vizagapatam's development as the natural geographical outlet for the trade of South India. Vizagapatam, opened for shipping in 1933, links up the Central Provinces and Central India with the sea by a route shorter by 150 miles than any other; and its remarkable development is due as much to the merchandise of South India as to the overseas movements of managanese ore and oil-seeds from the two other above-named areas. Vizagapatam is recognised as revolutionising the harbour history of India and the Davidson Committee recommended the Federation of the Port because, next to Bombay, it is the most important harbour on the east coast.

* *

The Governments of Madras, Cochin and Travancore have conjointly nursed Cochin into promising port. Ten years ago, ships dropped anchor three miles out at sea, loading and unloading into lighters—a precarious and perilous arrangement during the monsoon. The constitution of an Up-to-date harbour offers modern facilities for handling shipping at the port of Cochin. Protracted conferences on the allocation of the revenue of the Port between the governments of Madras, Cochin and Travancore have taken place; and the matter is approaching a settlement.

* * *

Karachi, with its 22 wharf berths and 18 moorings for ocean-going vessels, mostly idle now, is counting the days for the lifting of the clouds of depression. The course of trade flowing through Karachi is clearly on the exports side, with diminution of imports. The prospects of competition from Kundla creek, almost ready as a well-equipped port, for the trade of Northern India by the linking up of the State Railways with trunk lines are not reassuring to the position of Karachi. Prolonged negotiations regarding Kathiawar Ports are proceeding with the Government of India, the conclusion of which will stabilise the competition with Karachi of Kundla creek.

INDIAN COTTON AND THE AMERICAN EXPERIMENT

In paying his mead of tribute to the great President of a great country Sir Purshottamdas Thakurdas has voiced what is the general feeling amongst a very large number of Indians who are eagerly following the course of the stupendous

experiment that is being carried on in America. In the course of his address at the Annual General Meeting of the East India Cotton Association on December 4, Sir Purshotamdas expressed his admiration for Mr. Roosevelt in terms that, coming from any other man, would amount to a penchant for the American President. Sir Purshotamdas, of course, is more directly interested in the fortunes of the American experiment, which, amongst other things, seeks to lever up the price of cotton through methods which are almost staggering in their boldness and novelty. It is true that the experiment has not proved a 100 per cent. success to use an adjective out of the American vocabulary. But it has certainly achieved some success ; and the bright outlook for cotton to-day is largely due to the success it has achieved.

* * *

India, which has the second biggest cotton growing country in the world, is naturally vitally interested in the experiment. It is not possible for India, with her scanty resources and her lack of enterprise or encouragement, to emulate the ways of the United States of America. But it is possible for her to share the fruits of the good work and that is what she is doing. Whereas in December, 1933, the quotations for Bengal, Oomra and Broach had sunk to Rs. 128, 158 and 181, they were now quoting at Rs. 145, Rs. 201 and Rs. 226 respectively. All this was the result of the self-denial of the American cotton grower and the determination of the nation to lift the country from the slough of depression. And it was all the more creditable coming after the abortive World Economic Conference which proved that the world was bankrupt of good sense and sound policy.

"The U.S.A., after that, set the example, single handed, of some systematic method of relief from the threatening danger. It is a noble task which history records with honour to the State and to the great President and I hope no petty and self-seeking considerations will be allowed to prejudice it. America's entry in the world war is supposed to have brought its end nearer. Is history likely to repeat itself? Will President Roosevelt's experiment bring nearer the end of the economic depression? Let us hope and help in that direction."

* * *

Sir Purshotamdas does not lay the blame for the state of affairs in India completely at the door of the Government of India but in his opinion the Government of India should attempt to give relief to the cotton grower in India in humbler ways and in smaller measure. A reduction of railway freight on cotton, for instance, would go a long way towards relieving the strain on the cotton growers. Sir Purshotamdas's panegyric on the Roosevelt Experiment should, coming from such a man, open the eyes of the authorities to the need of a wise and planned policy for Indian cotton.

CALCUTTA MUNICIPAL GAZETTE

The Tenth Anniversary Number of the *Calcutta Municipal Gazette* fulfills the expectations which Mr. Amal Home alays raises in the minds of the public regarding the special issues of the *Gazette*. Few outside the ranks of professional journalism can realise the difficulties of making a success of a journal like the Gazette. And the atmosphere of the Municipal Corporation which, of late, has become a by-word for party wrangles is far from helpful to the preservation of the tone and spirit which are the essence of a journal ; nor are the themes which the Gazette has ordinarily to deal with such as to sustain the interest of the reader. But Mr. Amal home has risen above these obstacles and maintained a high quality. His special numbers have always been noted for their perfect get-up, careful planning and variety of interest ; and this year's aniversary number is more than true to type. The Gazette is not the least of the objects of Calcutta's civic pride.

DEWAR'S "White Label"

GROSVENOR HOUSE,
London, Nov. 24.

There is I find, a growing discontent among my readers in India which, my Editor warns me, I should heed and appease. Many have entertained the idea that the first sojourn in London and the protracted voyage anterior to it would impel me to fill my allotted space in *Indian Finance* with thoughts and impressions of a personal kind. Not that I encouraged it. For I had no such idea myself of strutting the stage set in these columns all by myself. Nor was I aware that people had such ideas. But I can have an idea of how fondly some of my readers, and my personal friends particularly, cherished the hope of learning of my doings here. I concede that in a less hectic time than I was privileged to see here in London, I might have alighted on matters personal from the ethereal heights of international finance. But the fact is that from the moment I landed here I have been caught up in the current of big movements. My kind friends here had normally been making flattering references to *Indian Finance* and to me. And these references became more frequent with the knowledge that I was due to arrive here. And in a few days, the events were such that, as I said on an earlier occasion, I appeared in the light of a proved prophet. It is exhilarating, this idea of your prognosis coming true, and in such an impressive fashion. Giltedge shoots up like a rocket; and unlike a rocket stays there, taking breath, as it were, for a further jump. The yields on securities drop; and habituated as I am, to view the state of giltedge prices in relation to the national finances, I conjure up visions of 3½ per cent. paper proving its popular appellation untrue. The gains that the state can make are quite considerable; and the Government of India is not so affluent that it need scorn the economies that are possible in this regard. I have thought over this question; and I personally see no difficulty in the way except that of overcoming the chronic inertia of our authorities.

This is no minor obstacle. I have some knowledge of the resistance which the Government can offer to new ideas. Not only are they not responsive, but there is in every official an instinctive opposition to aught that emerges from outside their ranks. Rarely do we get a Sir Basil Blackett, whose instinctive preference is for the new. And during the greater part of the years in which I have been conducting *Indian Finance*, it has been my lot to combat the ideas which have held sway in the ranks of the Treasury. I had urged from the beginning the evil of offering on a new loan a higher yield than is forthcoming on the existing securities at the ruling prices. The Government clung tenaciously to their belief in the attractions of a higher yield, with what results, the Government as well as the people know. I think that it was just an accident that procured for my idea a chance. The results, again, are well-known. And from then the credit of the Government of India, which was formerly set in an inclined plane, began to pull up. The great conversions of 1934 were effected. But even here the effort was half-hearted. Doubt, hesitancy, and lack of confidence interfered with the course of policy; and the results, which should have been magnificent, were whittled down.

There is, I believe, much in past experience to convince the Government that for great achievements, a certain amount of daring, belief in one's self, more than even, perhaps, reason would warrant, is necessary. As I said, "Think big; act big." In Sir James Grigg, the elements of the psychology which makes for outstanding success are present. The idea that irredeemable paper can be redeemed and 3½ per cent. converted to 3 per cent. or even under is, indeed, somewhat staggering to those who still live in the times when Government used to issue loans without limit of amount and without limit of time and, I may add, space too, for they scoured the whole country through the post offices for loans at 6 per cent. and came out with a paltry total. In London, on the other hand, no one in the Treasury seems to feel that a 2½ per cent. rate of new borrowing is too good to be true. Here they are, paying out 44 per cent. of the Treasury Bonds instead of a fourth of it on the ground that 3 per cent. is too expensive for a short term accommodation. We want a like mentality in India; and I am not without hope that we shall see its emergence soon.

But I forget I have gone along the same track against which I was warned. I did set out to satisfy the insistent demand for personal impressions, though I have not treasured them up in the way some people do with the preconceived purpose of setting them down someday in print. For to me this trip up here is not a joy-ride. I had set out with a purpose. And I never conceive a purpose without pursuing it in my mind to the point of being almost obsessed with it. All the days I was on the seas, I regarded as a time for reflection as an opportunity for turning my thoughts over and over in my mind. But I was not indifferent to the opportunities which this unexpected freedom from the usual bustle of my life offered me. And strange to say, I harked back to the forgotten days of physical exercise and a kind of morning drill. Fancy my walking round the deck three times, which a bold placard told me make a mile and feeling proud of the effort. But I stuck to the routine all the days I was on the

high seas and felt, and still feel, that it had a great deal to do with my keeping fit during the voyage. To confess the truth, I had no great idea of myself as a sailor and having had to do the first voyage after passing the middle age, I had my doubts whether the sea had not dangers of which mother Earth has no counter part. Now safely here at the other end, I do believe I have not done badly. I am not exactly made for the sea. But the sea has lost its terrors for me.

There is only one feature of life in the liner which is worth picturing. A strange crowd gets jostled there, thrown together for just a fortnight and bound to melt away at the end of the voyage into distant corners of the world. But it has a way of getting friendly, almost chummy during this brief stay. From the manner they move with one another one would think that they were life-long friends and would remain so forever. There is no awkward strangeness, no reserve in their relations. But at the end they leave without so much as waiting to say goodbye and I wonder if any one has thought of those who made the life in the watery wastes so enjoyable and pleasant. Indeed, this capacity to make temporary acquaintances so warm and hearty is perhaps one of the accomplishments necessary under modern conditions. One moves from one strange society into another. Our lives do not admit of those life-long ties which an earlier generation used to boast of. And taking life as it is, it is quite as necessary to be gay and free in new company as loyal and steadfast in more enduring friendships. For me I have in abundant measure the quality of making myself pleasant even to the strangest; and I am sure in my mind it is no pose or a thin veneer of social amiability.

abroad or at home in India. There is nothing to fear from the political developments, unless it be that India shows an unsuspected capacity for agitating against the new constitution. For our part we are convinced that for some to come nothing can stop the onward course of giltedge prices and the fact that the Joint Parliamentary Committee report caused no change in the prices of securities despite its highly reactionary features must reassure the Government and people alike that the Government of India's credit must continue to improve in the future. It only remains for Government themselves to recognise the fact and to proceed actively to secure the tangible advantages which a higher level of giltedge prices offers to national finances.

During this period of rise in giltedge the stock markets have been a good rival to Government securities for the affections of investors and operators. It was suggested sometime ago in *Indian Finance* that the conditions which now rule in the money and trade markets it is by no means impossible that the boom in giltedge can be concurrent with the rise in stocks and shares. Both India and Great Britain have experienced that phenomenon and in India investors are seeing new possibilities in jute shares. Not only the yields in jute shares are much higher than the yields forthcoming on giltedge at the present prices, but it is held that the position of the industry is quite sound and that jute shares are the best combination of safety with remunerative yield. The week has seen a further rise in the price of jute shares. In Bombay, too, the boom has again started in the shares of Tata Iron and Steel; the ordinaries have risen from Rs. 92 to Rs. 106 and the deferreds from Rs. 318 to as high as Rs. 467.

The exchange market has been dull and rates are unchanged. Business on account of the investment of foreign funds in Indian Treasury Bills has moved freely with the prospect of a reduction in the discounts in India and a rise in money rates in London. At present business is carried on in infinitesimally small margins; and if anything should occur, the plans might be upset. This, one might expect, will tend to reduce this kind of business.

In the sterling tenders for one million applications at 1s. 6 1/16d. totalled £1,730,000 and were allotted approximately 58 per cent. One million will be re-offered on December, 12.

The closing rates are: 1s. 6 1/32d. T. T. for December-April ; with 1s. 6 3/64d., available for interbank May-October.

Bills may be quoted: 1s. 6 1/8d., December-April and 1s. 6 3/32d., May-October.

Call money was quoted at 1 per cent. at the close of the week after having quoted 3 per cent. in the middle of the week. Onemonth deposits quoted 1 per cent. and twomonth and threemonth deposits 1¼ per cent.

OLYMPUS

(FROM OUR CORRESPONDENT)

New Delhi, December 4.

The Viceroy is here ; but the The Viceroy's House has been closed. Which means that Her Excellency has left for Calcutta. With his multifarious duties, His Excellency cannot be expected to look after the household affairs which are best left to Her Excellency who does them so brilliantly. That probably explains why Sir Harry Haig did not stay at The Viceroy's House and put up with Sir Frank Noyce for the three days he stayed here before he went to Lucknow to assume the Governorship of the United Provinces.

* * *

Very soon Calcutta will be hubbing with social life and the Viceroy will be hard put to it to fulfill the numerous social functions. If it were merely social functions, the strain might be bearable. But His Excellency is also in the midst of very heavy work caused by the large number of political and financial issues now under consideration of his Government. Added to that is the necessity for the Viceroy to make up his mind as to how much to say in Calcutta where his speeches to the Associated Chambers and at a dinner are always looked forward to with interest.

* * *

Another reason why the Viceroy's speeches at Calcutta may prove very interesting is that His Excellency might take this opportunity of expressing his thoughts on the present day politics without waiting for the meeting of the Assembly ; for there is just a chance of the Congress members taking the unwise decision of walking out when His Excellency rises to address the Assembly ; and The Viceroy might seriously consider whether in that case it is worth while addressing the House.

* * *

I hope, however, that it will be possible for Lord Willingdon to deliver an inaugural address to the Legislative Assembly. There is quite a lot that can be said on the occasion which may strike a right note and relieve the political tension created by fears of what the Congress Party may do in the Assembly and under the future constitution.

* * *

After all, the advent of the Congress in the Assembly is an accession of strength to the school of thought which believes in constitutional methods of agitation. True, Congressmen are not constitutionalists in the ordinary sense of the term, but so long as they do their best to work the constitution there is an advantage in having their voice heard in the Assembly. Nothing damages a government's reputation more than its beliefs based on opinion which is really not expressive of the feelings of the nation. I think if both sides make a real gesture, the first Assembly session may mark the beginnings of better relations between the Government and the Congress.

* * *

I hear Sir James Grigg will have a comfortable tale to tell the Assembly through his first financial statement. He has been quite lucky in a way. Government revenues have not been disappointing and, all told, it is apparent that Sir James will be able to present a balanced budget. There may be a small surplus, too ; but whether it will be devoted to the restoration of the salary cut remains to be seen. There are certain considerations which must be weighed before he makes up his mind on the subject.

* * *

For instance, the postal authorities may find that they have to go a step further in the move they took last year and that for the sake of better earnings they would reduce the postal fees still further especially in the case of post cards. If such a measure is administratively considered desirable it would affect the government surplus somewhat. The same thing may apply to other departments.

* * *

As regards the Railway Budget, it will show better results than last year and hope is expressed that the budget may balance this time. At any rate, nothing very spectacular may be expected on the railway side ; and certainly Sir James Grigg will not be able to get any contribution from the Railways for at least another two years.

* * *

The question remains as to whether the Statutory Railway Authority would be established at an early date. My enquiries show that the question has not been taken up seriously yet. It is not even decided whether legislation should be undertaken in India or in Britain. Probably, doubts on this will be resolved after the Indian Reforms Bill is introduced in the House of Commons. The authorities here do fear that a bill of this kind may not get through the new Assembly and they are anxious to avoid a crisis on the subject.

* * *

Another reason why there seems to be no hurry in the matter seems to be that, after all, Federation may not come into being till 1939 and there is ample time to think about a Statutory Railway Authority. For some time, at any rate, government would like to see how Congress behaves in the Assembly and on that experience will be based their decision with regard to railway legislation.

* * *

Moreover, the question of a portfolio for Communications is still under discussion. Sir George Schuster has almost pledged the Government to setting up such a portfolio ; but I doubt whether any scheme on the subject will be ready for discussion during Demands for Grants. The European Group in the Assembly has led the movement for a combined portfolio ; and Sir James will have to satisfy that friendly quarter as to why delay has occurred in coming to a final decision on the recommendations unanimously put forward by the last Assembly.

* * *

At present, the Commerce and Railway portfolios are really too large for one Member. Sir Joseph Bhore has been very hard worked ; and whereas he had the advantage of considerable departmental experience, his successor, Mr. Chaudhry Zafarulla will, in that respect, be handicapped and will find the task very strenuous. All considerations, therefore, point to the need for separating the two departments and having a separate department for communications leaving Mr. Chaudhry the charge of the very important subject of commerce and tariffs.

SOUTH INDIA

THE WRANGLE OF GOVERNMENTS

(FROM OUR CORRESPONDENT).

Madras, Dec. 4.

Thanks to the development of ports and the new projects of irrigation, South India has come to have a kind of international politics, with this difference that the Governments concerned are not altogether autonomous or paramount. Reference has been made in these columns frequently to the differences that arise between the Governments of Madras, Mysore, Hyderabad, and sometimes even the Government of Bombay over such questions as the division of the customs revenue at the port of Cochin or the waters of the Tungabhadra or the royalty to be paid for the use of the Cauvery waters at the Hydro Electric plant at Sivasamudram. Even the scheme of Rubber Restriction involves inter-Governmental despatches. In these honours, Northern India has little to share. This explains the fact that hardly a week passes without our having to refer to conferences amongst the various Governments and their vicissitudes, the opposing standpoints and the threat of a higher party intervening. The Government of India may even be likened to the League of Nations, a sort of super-national authority intervening when the smaller nationalities show themselves unable to compose their differences.

Strangely enough, the last two months have been a period of, if we may use the language of the higher spheres of inter-national European politics, high tension. There was hardly any such conference that may be said to have progressed towards an amicable settlement. The failure of the authorities interested in the development of the Cochin harbour to come to a settlement on outstanding issues is indeed the most notable instance of this tension. Likewise, the division of the waters of the Tungabadra has been the cause of some misunderstanding and even ill-will between the Governments of Madras, Hyderabad, and Mysore. Nor was the question of royalty to be paid by the Government of Mysore to the Government of Madras any easier of settlement. In all these matters, the gulf of difference between the various interests has been fast widening. And wherever it was possible to invoke the intervention of a third party, it would seem that it was the only hope of settlement.

But now, more benefic signs seem to have risen on the zodiac. Not that the parties have become more accommodative. The improvement is due partly to the change in circumstances, partly to the coercive character of the problems in question. But any way, we seem to be nearing the end of these futilities. The most notable instance of such improvements is, perhaps, the Cochin Harbour Conference. It was pointed out last week that the Government of India would appear to have been in a more reasonable frame of mind. The *communiques* that have been published after the Conference are distinctly more encouraging. It is a great thing that they are not mere reports of a breakdown. There is mention of definite schemes which have been formulated and which are given the best consideration by the contending parties and the details of which are kept highly confidential. The public have been warned not to be taken in by accounts purporting to be authentic ; and it is said that nothing can be known of the terms of the settlement till they are officially released for the public. All this augurs well. And the Cochin Government seem to have sensed the position well when they made the Budget provision for the last stage of the Harbour development.

While this is a case of the dawn of sweet reasonableness, in the case of the Tungabhadra waters relief comes from quite a different quarter. It will be remembered that the Conference, which formerly met to discuss the question, had to break up because the claims of the Mysore Government were pitched too high and left little for the Governments of Madras and Hyderabad to share between themselves. It is now reported that the original estimate of the available waters was unduly conservative, and that an estimate nearer to the actual supply will reduce the conflict between the claims of Mysore and Hyderabad. To give concrete figures, it was thought, that the annual dependable flow at Lakkavalli would amount to 2.75 lakhs millions of c.ft. Of this, Mysore wanted 90,000 millions of c.ft. for her project and did not care much how Madras and Hyderabad shared the remainder. It now turns out that the Madras estimate was unduly conservative. The Mysore Engineering Department calculates that the annual dependable flow of the Tungabhadra at Lakkavalli is 3.25 lakh million c.ft. If this is really "dependable," then neither Madras nor Hyderabad need grudge Mysore her claim of 90,000 million cubic feet. For Madras and Hyderabad would then have 2.35 lakh million c.ft. And this would suffice for every project they have on hand. The source of the new estimate may, perhaps, give rise to doubts whether it was not made with a view to persuade Hyderabad and Madras to grant the claims of Mysore. Till the other Governments concerned have checked the estimates and satisfied themselves that there is, indeed, so much water available, there is no reason to hope that the issues will be amicably settled. But on the supposition that the estimate of the Engineering Department proves to be correct, there would be no need for calling the Government of India to intervene ; and one of the problems of South Indian politics will be solved before long.

It is regrettable that the dispute over the royalty for the use of the Cauvery waters at Sivasamudram has not made similar progress. And it is only understandable that this should be different from the other questions we have referred to before. There can be no *Deus ex machina* here as in the case of the Tungabhadra waters. The facts of the case must be already familiar to the readers of these columns. The Mysore Government are now paying about Rs. 70,000 per year as royalty to the Government of Madras. They contend that their agreement with Madras was entered into when Mysore had not embarked on her great engineering achievement, the Kannambadi Dam ; that the generation of greater power and the more effective regulation of water are the results of the Kannambadi dam, for which no credit is due to the Government of Madras ; that the Kannambadi Dam had cost Mysore a great deal in initial capital and current maintenance ; and that it is, therefore, inequitable for the Madras Government to insist on Mysore adhering to the old rates. It will be remembered that the representatives of Mysore and Madras met in a Conference in Bangalore in October last and that they failed to bridge the differences. The only progress that has been made since is that each party is becoming more and more convinced that the dispute cannot be settled except by the arbitration of a higher authority like the Government of India. It is learned that at the October Conference Madras was inclined to fix the royalty at 30,000 rupees and Mysore was prepared to offer only half the amount. Here is a clear case for the abandonment of negotiations and the intervention of the higher authority.

While the Governments in South India are wrangling over their claims and counter-claims, some silent efforts are being made to improve the position of the masses. There is at present no single measure capable of giving relief to all classes except an improvement in the price of paddy. And it might also be said that, even if a higher price should not be feasible, the mere expansion of the markets would reduce the prevalent hardships of the agricultural and the land-owning classes. For, till very recently

(From Our Correspondent)

Thursday, Decr. 6.

Bombay has sunk once more to the humdrum existence that is the despair of jurnalists. The spate of conferences and important sessions is over. And the poor journalist has to fall back once more to the dreary meetings of Corporations and unauthorised gossip. Fortunately under the latter category there is an important item to report. The Associated Chambers of Commerce are reported to have submitted a memorandum to the Government of India on the important question of the trade relationship between Lancashire and India. The Chambers are supposed to have produced figures in their memorandum to show that Indian mills are making enormous profits owing to excessive protection, and that, therefore, an excise duty should be imposed on finished piecegoods. The Cotton interests of Lancashire are known to have protested against the inequity of a surcharge duty which handicaps the competitive power of Lancashire. The Chambers are supposed to have pointed out that an excise duty on Indian products will, to a certain extent, counterbalance the heavy protective duties on British fabrics. Nor should this procedure unduly irritate Japan for her quota has been fixed in a way. The memorandum, in short, fully supports the demand of the Lancashire delegation presented before Mr. Runciman that the United Kingdom producers of cotton and artificial silk goods should have full opportunity of reasonable competition with India's domestic producers.

The report is not officially corroborated and wish on the part of those who look after Lancashire's interest in India is said to be the father of the thought that such a representation should be made to the Government of India. I refrain from commenting on this item lest I should be considered as opinionated.

The end of the labour dispute at Ahmedabad is at last in sight. The Millowners' Association and the Labour Union are carrying on negotiations with a view to evolving a permanent scheme for amicable setlement of all labour disputes including the endless dispute about wages. It has been decided to invoke the help of Mr. Gandhi, the apostle of peace. Mr. Gulzarilal Nanda, the Secretary of the Labour Union, has proceeded to Wardha to discuss with Mr. Gandhi the details of a scheme of settlement. After his return the Millowners' Association and the Labour Union will meet to give effect to the scheme with the help, if necessary, of Mr. Gandhi himself. Despite all that is said to the contrary age hath not withered nor custom staled the magic of Gandhiji's magnetic personality.

The trouble at the Madhubhai Mill, however, continues unabated. The new operatives who were employed by the mill authorities in place of the old hands who went on strike, are reported to have expressed a resentment at being paid at a lower rate. They are said to have adopted such a truculent attitude that the mill authorities had to requisition police aid to prevent any untoward happenings. It is considered not unlikely that the new hands will also go on strike. This will greatly strengthen the position of the original strikers and may help in bringing the authorities into a more accommodating mood.

The Barsi Agricultural and Cattle Show should prove a landmark in the scheme of village uplift which has recently engaged the attention of the Bombay Presidency. Mr. R. D. Bell, the Home Member, in course of his speech declaring the show open observed

> 'In the last year or two a great deal has been heard about the desirability and necessity of organising schemes for village improvement, and a great deal has been achieved in establishing a village improvement movement on a wide basis. In 1931, a beginning was made in doing something for the improvement of the conditions of living in the villages of this district. You are therefore pioneers in his movement; I am glad to note that the lead which you took three years ago is still maintained, and I hope that you will long continue to show the way to others in this important work for the welfare of those who live in villages.

The authorities of the Barsi Municipality took advantage of this occasion to present an address to Mr. Bell:

> After referring to the progressive income of the municipality, which exceeded Rs. 2,22,000 in 1934 and the population 27,610 which showed an increase by 7,061 in last ten years, the address mentioned the town improvement works carried out during the last three years at a cost of Rs. 30,000, the new hospital building, estimated at Rs. 48,000, and a market costing Rs. 11,500. The questions of increased water supply by putting an additional main to the Pathri tank, and financial grants for water-supply and drainage, were also mentioned in the address.

While on this subject of municipalities I may mention the efforts that are being made by the City Fathers to improve the amenities of Ahemedabad chawls. A motion for the provision of better conservancy arrangements for the chawls was duly passed at a meeting of the Ahmedabad Municipality. It is a gratifying sign that sanitation is figuring more and more largely on the programme of Indian Municipalities.

The question of relieving unemployment in the Bombay City was raised at a meeting of the Bombay Corporation on December 3. One of the members put forward the rather pointed question as to how the Corporation could think of spending money on relief measures when there was a great leeway to be made up in their Budget. It is true that unemployment in Bombay City is a crying problem that needs immediate solution, but the ranks of the unemployed in Bombay are not wholly made up of regular Bombay citizens. It is a peculiar feature of Bombay that its population is made up of a class of "floating" individuals of the type that any important business centre in the world attracts. Citizens of Bombay proper are not easy to distinguish and it is not unjust to insist that the funds of the Corporation should be spent on the latter. If unemployment in Bombay is to be relieved let Government find other sources of raising funds for the purpose. But with an unbalanced budget in the offing, it is unfair to leave the task to the City Fathers. Under its present state of financial stringency the resources of the Corporation cannot bear any extra strain.

Most of the unemployment in Bombay exists among the skilled mill hands and the middle class for neither of whom are ordinary relief works providing only manual labour suitable. It would be pertinent to ask in this connection whether the mill authorities cannot, by forsaking the rather rigid attitude they have adopted so far towards labour in the mills, help to solve the problem of the vagrant labour. With a little sympathy and co-operation from the millowners, the problem will cease to assume such gigantic proportions. But the endless strikes and labour disputes notwithstanding, the mill authorities are still as inexorable as ever. Will Mr. Gandhi's mediation contemplated at Ahmedabad work the miracle?

There is another important point to be considered in this connection. The institution of relief measures at Bombay will probably mean a further influx of unemployed emigrants into the city and in that way might defeat the very object for which the relief measures are introduced. For in this matter it is not possible to do good by stealth.

GREAT BRITAIN

THE JOINT COMMITTEE'S REPORT

The pride of place in this week's report must be given to the momentous volume that contains the record of the deliberations of the Joint Parliamentary Committee set up to make recommendations on Indian constitutional reform. All that has happened in the interim since the publication of the Statutory Commission's Report had deepened the pessimism of those who seriously doubted the possibility of the Joint Committee proving more liberal than the Simon Commission. The Churchillian Group have continually pulled the other way and a strong body of British commercial interests has successfully queered the pitch for the constitution makers. Even if the Committee had applied an open mind to their task and not been swayed by pre-conceived notions about 'safeguards' and 'responsibilities', the Report could not but be coloured by such persistent, if perverse, opposition.

As it is, the Report is a queer hotch-potch of 'safeguards' and 'special responsibilities' and responsible Ministers and provincial autonomy. It is said that a Marwari firm seldom goes into liquidation because as soon as one is found to be in a bad way it is transformed, with a few changes in its name and its account books, into another which is virtually identical with the first. The Joint Committee's Report reminds one of such back-door methods. For with the most meticulous care, the authors have succeeded in withholding what they make such an elaborate show of conceding, namely, real responsibility. You may call the proposed reforms federation or a confederacy as the mood takes you, but you must not call it responsible Government.

From all portents, the India Bill will have a stormy passage through the House. Mr. Churchill, whom nothing short of a roasted India served up on a salver, will probably satisfy, is brushing up his choice invectives for the occasion and a few spokesmen will, no doubt, be found to press for further advance. But eventually India will, it is certain, be saddled with a constitution, Viceroy-ridden and Civilian-led, with the controls for the whole machinery within the safe precincts of India House.

Trade and Ottawa

Faith in Ottawa dies hard or else a pretence of faith is kept up in the official mind. From a review of the import and export figures for the first three quarters of the year, an attempt has been made to justify the Ottawa Agreement. Various other conclusions are also drawn, such as the influence of dollar depreciation, the value of the bilateral trade agreements, the menace of Japanese competition and a host of others. In short, the figures are made to uphold the entire viewpoint of British fiscal policy.

A table indicating the most important results are given below:—

FOREIGN TRADE: JANUARY-SEPTEMBER

(In millions of £)

	British imports			British exports		
	1932	1933	1934	1932	1933	1934
British Empire—	183.4	181.7	200.4	123.5	118.2	133.1
Of which:						
Australia—	34.7	34.3	36.2	14.2	15.4	19.2

India—	21.9	24.3	29.4	25.9	24.4	26.3
New Zealand—	31.5	31.4	34.5	7.6	7.0	8.3
South Africa—	10.7	10.1	8.5	12.8	16.6	21.3
Foreign Countries—	336.8	306.1	336.4	147.6	150.2	155.9
Of which:						
U.S.S.R.—	13.0	11.1	12.7	7.1	2.8	2.8
Scandinavia—	47.3	43.5	44.4	16.5	17.5	21.0
Baltic States*—	13.1	13.6	16.2	2.5	3.3	4.5
Gold Bloc†—	55.2	47.0	50.6	37.5	38.7	38.4
Germany—	22.2	21.0	22.7	10.5	10.9	10.7
U.S.A.—	58.8	52.2	57.4	11.1	13.9	13.2
Argentina—	39.8	32.5	35.3	8.0	9.8	10.8
Japan—	5.1	4.9	6.2	4.4	3.4	2.9
Total	520.2	487.8	536.8	271.1	268.4	289.0

*Estonia, Finland, Latvia, Lithuania.
†Belgium, France, Italy, Holland, Switzerland.

It is pointed out that while in 1932, Great Britain's exports to the Empire amounted to 45.5 per cent. of the total and imports to 35.2 per cent., this year the corresponding figures are 46.1 and 37.4. Hats off, therefore, to the Great Ottawa Agreement! It is not, perhaps, readily realised that the collapse of the currencies in some of the important countries of the world and the concentration of commerce in the sterling area was really a more potent factor. The apparent gain of India could be achieved only at the cost of losses in other directions.

It is interesting to see that Britain's imports from foreign countries are nearly exactly the same as in 1932, while exports are quite substantially greater. The effects of the trade agreements with Scandinavia, the Baltic States, and Argentina are evident enough. They are sufficient, in themselves, to account for the whole of the increase in exports. On the import side, most of the specified countries show a decrease. The balance is made up by large shipments from Brazil, the Dutch West Indies, and Central Europe.

Tobacco Prospects.

Is civilisation going up in smoke? So it would appear from a study of the progress of the tobacco industry. When an emasculated England was being 'manned' by trousered and bobbed-haired women during the war, the smoking habit spread rapidly amongst women and when the war-battered Tommies returned home they clung fondly to the habit that had helped to redeem the strenuous and gruesome life in the trenches. This gave a post-war fillip to the tobacco trade which has suffered but a brief diminution during the depression years. This year once more a boom is noticeable and it is almost certain that 1934 is going to beat all previous records in the industry.

There was a startling increase in the import figures for raw tobacco for the month of October, 1934. It has been explained as due to the apprehension that there will very soon be a steep rise in the price of American tobacco. But a comparison of the figures for the first ten months of the year with those of previous years will prove that the demand for tobacco has definitely increased considerably.

	Imports in pounds.
October, 1929 ...	41,892,645

,, 1931 ...	25,164,736
,, 1932 ...	22,121,640
,, 1933 ...	22,700,053
,, 1934 ...	49,709,686

Air Mail Week.

First ten months of		Imports in pounds.
1928	...	149,006,545
1929	...	171,439,661
1930	...	168,517,436
1931	...	141,585,447
1932	...	126,666,331
1933	...	151,446,713
1934	...	192,777,471

Although exports have increased considerably during recent years, yet the home market constitutes the most important market for England's tobacco industry and it is there that the signs of expansion of demand must be sought. The potentialities of the home market can hardly be said to be exhausted when carmine lips gripping a BBB pipe is still not a familiar sight in England to-day. It is no doubt a gratifying feature of England's internal economy that her public-spirited daughters rally to the succour of an industry that in other countries caters chiefly to the demands of the mere males. It is not very likely that the pub-loving Britisher will ever let the brewery trade of Great Britain suffer an eclipse: but, even in that remote contingency, the suffering brewers may look for relief from the football-playing, cigarette-smoking, cocktail-drinking fraternity of England's women.

U. S. A.

RE-MODELLING OF N. R. A.

Sometime ago, it was observed in these columns that the New Deal has arrived at a critical stage in which a thorough re-examination of results and a revision of the policies would be necessary. This opinion would now seem to be becoming more general. It may even be said that it has spread to the ranks of the Government and even some of the chief officers of the N.R.A. For there is the inescapable fact that the progress of business has during this Autumn slowed down; and the results of the working of the chief industrial corporations are not such as to encourage the belief that it would suffice to continue on the old lines. It has, therefore, been widely conceded that the time has come when the results of the policies pursued so far ought to be considered and a new policy formed in the light of the conclusion. It may be said that, when such a view comes to be held widely, it marks a definite improvement on the earlier state of things, when men were sharply divided into enthusiastic support and downright opposition to the policy of the New Deal. Even those, who were all along opposed to the N. R. A. are in a mood to concede that the New Deal has achieved much that would have been impossible by the traditional methods; that the New Deal has effected such fundamental changes in the constitution of the national economy that it would not be easy to scrap the whole thing and ensure a simple return to the conditions before its introduction. Nor do its supporters claim that the New Deal has been an unmixed good and does not leave room for improvement. That the whole of public opinion has been able to come round from the extremes to a certain broad common ground in regard to the future economic policy is a great gain which America should know how to use in the future.

While there is agreement that something new has to be done, the policies to be pursued have not, by any means, been clarified. In the first place, the results so far achieved are by no means conclusive. While the rate of production has no doubt slowed down and the rates of profits, too, have been less than in the earlier quarters of the year, there is the vast improvement to record in retail sales. Considering that much of our present troubles is due to the steadiness of consumptive demand at very low levels, the change that has been wrought in retail sales cannot be underrated. Retail trade has, indeed, been excellent and has given business a support which it had long despaired of. Departmental store sales in August were the best in over two years. And if in September they showed slightly less than the usual increase, they were 4 per cent. over a year ago; and in the first half of October they were 8 per cent. above 1933. Sales of chain stores and mail order houses in September were 11.5 per cent. above 1933, which is a greater advance than in August; and conditions in October were also good. But in contrast to improvements in retail trade, industrial production had been declining for five months. The Federal Reserve Board index for September was 71 per cent. of the 1923-25 average and was the lowest since April, 1933, while the slowing down of the rate of production may be regarded as a sign of a decrease in general business confidence.

It must also be remembered that the improvement in retail trade, taken together with the falling off in the rate of production, points to a fall in stocks of goods of all kinds which augurs well for business conditions in the coming months. It is believed that the preliminary data promise such an upturn in the future. The steel trade is often adduced as one instance of continued fall in production in proportion to capacity. But here it is noteworthy that the automobile industry is now in a dull condition, the dullness having been occasioned by the postponement of the issue of the new models to a later period than usual. But steel consuming industries generally have had a distinctly better offtake; and it is therefore possible that stocks have been substantially reduced. Building contracts were better in October.

In the improvement in retail trade the disbursements of money made by the Government on various account have, indeed, a large place. Unemployment in the services, and the industries producing capital goods, together with the general ravages of the depression have reduced the purchasing power to a fraction of its former size; and it is only recently that the Government have been making up the leeway by relief and emergency measures. On the authority of the National City Bank of New York, these expenditures during this Autumn have been running well over 300 million dollars monthly, whereas last year the monthly average at this period was well under 100 million dollars. The disbursements included in this category are those of the Federal Emergency Relief Administration, the Civilian Conservation Corps, drought relief, public highways, river and harbour work, loans to railroads for equipment and construction, loans and grants to States and Municipalities for public works. The total in the main roughly corresponds to the Federal deficit. It is calculated that the disbursements made by Government during the Autumn months are supplying purchasing power at the rate of one-sixth on last year's retail business, which, according to the last Census, amounted in 1932-33 to 750 million dollars. That this should make such a large difference between sales of the present and the earlier period is no matter for surprise.

Enough has been said to show that the present position of American Economy is such that business and Government alike can take up the task of the future in a spirit of hopeful reconstruction. If the position were worse, the forces of pessimism would gain ground. Equally, if the position had been better, there would be a proneness to rest on the oars. As it is, the improvement in retail trade supplies the reason for hope, while the slowing down of production raises the fear that a fall in unemployment might occur any time and complicate the recovery. It is only recently that the Government effected an administrative reorganisation of the N.R.A., and it is therefore, natural that they should now take up the reorganisation of the policies which are to be

administered by the N. R. A. The Government's range of thought seems to run along these lines. The chief men argue to themselves that now that consumptive demand has been rescued from the depths to which it had fallen during the years of the depression by means of the artificial measures adopted by the Government, it may be possible to sustain the same at this level and to help its automatic growth by policies more in consonance with the generally accepted economic principles. After the strenuous labours of these two years, the Administration might, conceivably, explore the means of leading industry again to natural and normal conditions.

The Administration seem to argue that in the present state much the better way of stimulating demand is to lower costs and prices and thus coax the consumer to buy more. This, it is obvious, goes against some of the basic principles of the national recovery policy as hitherto followed. It is not to be supposed, therefore, that all these cardinal principles of the New Deal are going to be abandoned all of a sudden. Those elements of cost, which determine the volume of mass purchasing power, it is believed, will have to continue unchanged. It is emphasised that a great deal of reduction of cost will be rendered possible by a mere expansion of output and a reduction of overhead charges per unit. Some of the industrial codes do prescribe limits of production and, to that extent, impede the progressive reduction of cost. The first step in the new policy may, therefore, be the removal of these restrictions. It must also be realised that some of the codes impose limits on the expansion of output and thus impede the lowering of costs. Here also there will be a relaxation and greater liberty of action will be afforded to the industrial organisations. In its present mood, American industry seems to be prepared to accept these changes as a sufficient concession to their viewpoint. And much hope is pinned to the declaration of Mr. Donald Richberg that "the ultimate assurance of a fair price must be found in the preservation of a fair price competition and in freedom to produce whatever quantity of goods a free market can absorb."

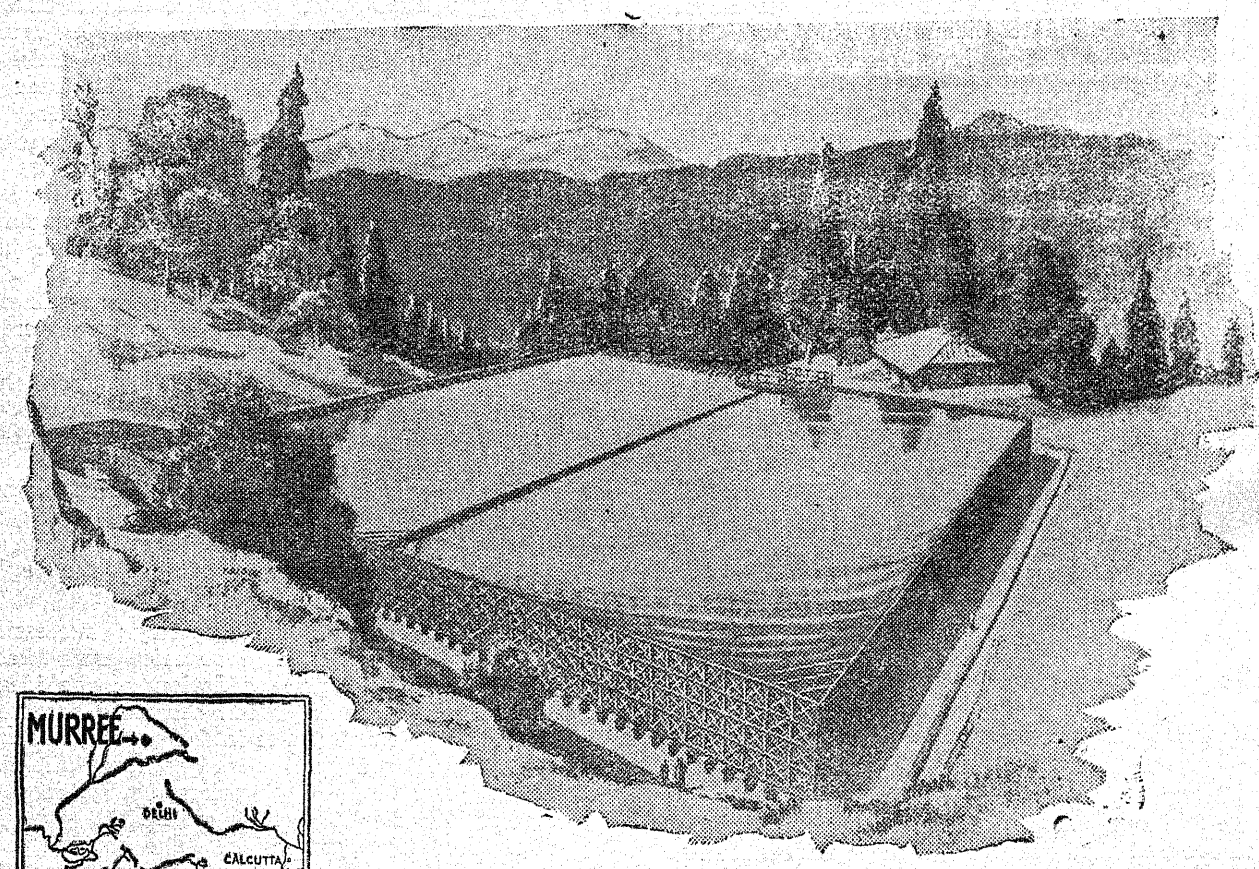
FRANCE.

When the Doumergue Government fell on the question of constitutional reforms, it was the firm conviction of M. Doumergue that the overhauling of the political machinery is necessary for the smooth functioning of government and for a return to prosperity. Unless a nation can govern its actions, it cannot follow any policy, external or internal, political or economical, with consistency. When France was found to be in such a state, it was his belief that the nation must be raised to that level where it can be made to govern its actions. That is how the ex-President argued. The new President, on the other hand, seems to think otherwise. According to him, the chief defect is with the economic system rather than with the political. If there are political problems, they have their origin in the economic problems. The various constraints which the State has put on the processes of exchange of commodities of daily need should be removed, if the nation is to recover from the effects of the depression quickly.

In the course of the Ministerial Declaration the Premier states that the economic regime of constraint has failed everywhere, and pleads for a gradual return to "liberty, organised and controlled." What this is meant to convey is still to be explained. People who have known M. Flandin intimately before he assumed his present office are of opinion that he will be inclined to consider the question of a devaluation of the franc sympathetically, at any rate not with so much opposition as did his predecessors. Unfortunately, public opinion in France is so decidedly in favour of the maintenance of the existing parities that M. Flandin will find it difficult to make a departure from the traditional policy. The fear of the dissolution of the Ministry is always there, in case the will of the Cabinet is forced upon the nation. It is to be remembered that within the course of three years France has enjoyed the luxury of no less than ten Cabinets with an average life of about three months for each. Flandin's Cabinet may share just the same fate as others; and there are some who would even think that the new government will not get beyond the Saar Plebiscite. The new Premier has, of course, the support of the moderate parties commanding a majority in the legislature; and this should be a source of strength. There is also the fact that the majority in both the Houses are anxious to behave themselves, lest there should be another crisis. The country is fortunate that the last Cabinet crisis has not been attended by any revolution or street rioting. M. Flandin is also a trained politician and has expressed his desire to work with the Legislature in a spirit of give and take.

To revert to the economic policy; successive governments faced by the economic crisis have followed the policy of price deflation as the ideal, but practised the same in a half-hearted manner in view of the discontent it causes in the nation. Tariffs have been raised and quotas established to prevent agricultural and industrial prices from falling. Subsidies of all kinds have been granted to save the exports from complete extinction. The improvement of the trade balance during the past twelve months has been the result of artificial trade restrictions of imports in the interests of the stability of the franc. If these restrictions are now removed and the adverse balance increased, the technical position of the franc is bound to weaken. The removal of quotas and the discontinuance of the artificial price-fixing will tend to lower the price of commodities in the country and bring it down to the international price levels; but this would affect adversely the agricultural interests. A fall in the price of wheat, for instance, would spell disaster to the rural producers. A general decline in price levels will produce losses in industrial concerns and for neither of these can the nation be expected to lend its support.

In addition to the import quotas, there is the question of exchange clearing agreements that France has concluded with other countries, notably Germany. Both these systems are defended apologetically; and certain departments of the Government would even advocate a broadening of the quotas and a substitution of higher tariffs in some cases. There has also been a distinct tendency in some circles for developing the clearing systems. But there are obvious limitations to this form of commercial relationship. The condition for the operation of the clearing is an excess of imports over exports to the country with which the agreement is proposed to be entered into. Clearing is essentially a medium for the settlement of the payments due from the foreign country. If there are arrears of credits due, an import surplus is indispensable. If there are no arrears a balance of trade is sufficient. An export surplus, on the other hand, is an effective barrier to exchange clearing with any country which will not or cannot use gold to settle the difference. This is what has now happened in the case of Germany. For several years past France has been importing much more from Germany than she exported to that country. In 1932 the total exports formed only 47 per cent. of the import value and in 1933 only 58 per cent. But the situation changed with the German default on the Dawes and the Young Loans and the subsequent trade position. The import surplus already reduced to 29 million francs in June, 1934, fell further to 10 million francs in August and has become an export surplus of 17



LARGEST PRESSED STEEL TANK IN THE WORLD

$3\frac{1}{2}$ MILLION GALLON RESERVOIR IN THE HIMALAYAS FOR MURREE

On a site so inaccessible that aerial-ropeway and bullocks provided the only possible forms of transport —where snow for a quarter of the year prevented all possible progress : under such conditions this immense steel tank was completed in under six months, a fitting commentary on the efficiency and resources of the Braithwaite organisation.

Air Mail Week

million francs in September and 29 millions in October. According to the figures furnished by the Franco-German office of Commercial Payments, the amounts of payment due to the French exporters from Germany for the three months ended Set. 31, stood at 545 million francs as against the imports amounting to 459 millions. The actual payments made by the imports into the Bank of France during this period amounted to only 271 million francs.

The problem of payments of commercial debts has now come to be acute, not to speak of the bond-holders receiveing payment of interest. The clearing agreement no longer commands the enthusiasm and support that it once did. Theoretically, the French sell cash to Germany, whereas imports are on the basis of credit ; but with the reversal of the balance of trade most of the sellers find that their sale is now on a credit basis. It is thought and argued in official circles that the delay in receiving payments will automatically act as a deterrent in reducing this export surplus ; but one will have to wait for subsequent events to prove how far this is correct.

Some would suggest the imposition of a surtax on imports from Germany, but this will have the natural effect of reducing the volume still further, with the result that the prospect of the exporters receiving payment will be remoter still. An alternative scheme is suggested that the exports to Germany should be subjected to a licensing system which would exclude certain raw materials and confine imports to such of the commodities that France finds it favourable to purchase from Germany. There is the fear that Germany would pay France back in her own coin.

JAPAN.

CLOSER TRADE RELATIONS WITH GREAT BRITAIN

The members of the F.B.I. Mission to Japan and Manchukuo led by Lord Barnby, after staying there for nearly a month, are now on their way back home and speculation is rife as to what would be the possible outcome of the Mission. Japan is only concerned with the British technical and financial assistance in the development of Manchukuo, particularly in the reconstruction of the Chinese Eastern Railway after it is purchased from the Soviet. Any kind of financial support whether by means of the prolongation of the maturing loans, by fresh financial transactions or by, at least, some kind of moral support for the yen, will be welcomed by Japan at the present moment. Next to the financial assistance, there is the ever-pressing question of trade. The recent movement for the boycott of Japanese goods that has sprung up in almost every country and the resultant trade barriers against the Japs., have made their effect felt in the Japanese export trade and many financiers and industrialists have begun to wonder if the period of boom has not already passed its climax. The failure of the trade negotiations with the Dutch East Indies has added to her anxieties and the willingness shown by the Japanese authorities in the many conferences to concede points which she would otherwise cling to, would also tend to strengthen this view.

But the Britisher, on the other hand, approaches the problem from a different angle. The prevalent view appears to be that co-operation should be limited, broadly speaking, to commercial matters only as against the Japanese hope of forming some political understanding as a basis of commercial agreement. Japan will not hesitate for a moment to accept a revival of the old alliance with Britain as soon as the Washington Treaty expires. She thinks that there is an inevitable connection between political, financial and commercial relations and that the closest co-operation should be established on all sides. Leaving questions of political issues aside for the moment, it is recognised that it should not be impossible to diminish at least the friction caused by the competition of exports from the two countries in many markets. There are those who can conceive agreements upon the direction of the export trade which would permit poor native populations to benefit from the cheapness of Japanese goods, and yet protect British industry from the evil effects of Japanese competition. Such agreements would not only profit both the countries, but also contribute considerably towards an expansion of the world trade as a whole. It is from this aspect that the British Mission acquires an added significance.

Though the nature of the arrangements arrived at as a result of the negotiations is not known, there was in evidence a good deal of sympathy for the two main interests of the visiting mission. The desire of the British industrialists to increase their exports to Japan and Manchukuo seems to have been met by negotiations for possible orders for British heavy and engineering materials. According to the Osaka Jiji, the Japanese Economic Federation is convinced that the most important need to-day is for Japanese industrialists to adjust Anglo-Japanese rivalry. It has, therefore, been decided to appoint Committees in Tokyo and London. The Committee in Tokyo is to be formed from several leading Japanese men with British business men in Japan as special members, while the London Committee is to consist of a number of British businessmen with the Japanese businessmen as special members. The Japanese Economic Federation will be the nucleus of the Tokyo Committee and the British Federation of Industries for the London Committee. It has also been agreed, says the Osaka journal, that an organ for the adjustment of trade relations between Japan, Manchukuo and Britain should be established through the assistance of the Foreign Office. It is expected that these decisions, will considerably influence British public opinion and the Far Eastern policy of the British Government.

Whatever changes may take place in the British policy, in the near future, the visit of the British Mission has caused considerable misgivings not only to the numerous Chinese, but also to the British industrialists in China. Such apprehensions are no doubt due to a misunderstanding of the purely commercial and private character of the Mission. The visit of the Mission has no doubt given opportunities to the Britishers to obtain a just picture of Japan and Japanese achievements in Manchukuo. It is therefore hoped in Tokyo that this newly gained knowledge will help to dispel the misunderstanding that exists abroad about Japan and create British sympathies for this small island fighting courageously against heavy odds.

Speaking of trade relations, it has been announced that the Japanese authorities in Turkey have this week concluded a commercial treaty with the Turkish Government. The chief feature of the new treaty is the adoption of the barter system. With the leading articles to be bartered previously arranged, the two countries are to trade on equal basis. The aggregate export and import total is fixed at about 10 million yen. Since the conclusion of a provisional agreement in July, the export trade has already been going on for some time on the understanding that Japan will buy tobacco, raw cotton and other products from Turkey.

JUTE AND JUTE GOODS

JUTE

Calcutta, December 6.

Due to renewed enquiry from Continent and good business consequently done by shippers, the raw jute market was very steady during the week under review. The highest and lowest quotations for December futures were Rs. 31 and Rs. 29-8 respectively. Fairly good business was done up to Rs. 29 in ready Firsts. Towards the close buyers were satisfied and sellers were more inclined for business, buyers having withdrawn. The undertone of the market has been fully steady, the easiness prevailing mainly due to profit taking and the approach of December Delivery.

The imports of jute for the five months, July to November, 1934, were 49,45 thousand bales as against 48,76 thousand during the same period in 1933 or an increase of 69 thousand bales. The export on the other hand show a decrease of 3,94 thousand bales. The number of bales exported during July to November, 1934, being 16,07 thousand bales as against 20,01 thousand bales during the same period in 1933.

JUTE MANUFACTURES

Calcutta, December 6.

Hessians market gained further strength during the current week. Business for nine porter ready was done up to Rs. 9-2. The rise was due mainly to speculative buying on the report of further reduction of local stocks, otherwise the market has ruled dull and featureless.

Business in ready Nine was done at Rs. 9 and at Rs. 8-14 for July/September. In sympathy with the hessians market heavy goods have also ruled steady though the volume of business put through was small. B. Twills have been done at Rs. 24-12 and striped Cees at Rs. 25-12. Small business was done in Cornsacks at Rs. 25-8 and Liverpools at Rs. 27-12. The undertone of the market is full steady. Mills have, however, sold very large quantities at these rates and the market is over-bull at the moment. Technically, it is good to sell for small profits.

Total reported sales for the week ending Saturday the 1st December, 1934.

	This and next month. Yds.	Forward. Yds.

COTTON AND COTTON GOODS

COTTON

Calcutta, December 6.

Steady conditions have prevailed in the cotton market throughout the week and prices for April-May Broach are well maintained in the neighbourhood of Rs. 225. There has been a fair volume of buying both by shippers and speculators and the paucity of contract has been responsible for the maintenance of higher pices, which in the earlier stage was caused due to the lateness of the Crops movement. This particular situation is now becoming more easy, specially the reports from Oomra Districts suggest that the Crop movement is slowly increasing in size. Latest weather reports from Ahmedabad suggest that the Crop in Gujrat and Kathiawar has been very much benefited by the mild winter. Crop in Cutch is excellent from the point of view of both quality and quantity. Taking all these factors into consideration taking profits at every rise seem advisable.

American markets have ruled steady on trade buying. Far east and south are reported to have sold. The paucity of contract is visible there too, sellers at the movement not being many.

The present feeling is definitely towards a rise. Technically, the market is bull and a sharp rise can only be safely expected when there is a big bear position. Thus unless fresh bear factors develop we do think that the market will remain narrow for the time being.

BULLION

GOLD

Calcutta, December 6.

Due to the decline in the London-New York Cross rate gold market has once again steadied up. London quotations have gone up to £7-0-11 from £6-19-6 per ounce a week ago. Likewise the local market has firmed up from Rs. 34-11 to Rs. 35-1. Stocks are accumulating in Bombay and export is once again brisk.

LONDON—Air Mail Week.

The Bank of England gold reserve against notes amounted to £192,050,330 on the 14th Nov., showing no change as compared with the previous Wednesday.

During the week the Bank of England announced the purchase of £62,753 i bar gold.

In the open market offerings amounted to about £1,100,000. A fair general demand was maintained and prices again included a premium over gold exchange parities; this premium, however, tended to ease slightly.

SILVER

Calcutta, December 6.

Dull conditions have prevailed in the silver market during the current week and the price fluctuation was very narrow. The highest and lowest prices of silver in London were 24¾d. and 24⅝d. per ounce for spot, whereas the local market hovered round about Rs. 67-4. New York silver has, however, come down to 54⅞ cents from 53¼ cents a week ago. Stocks are heavy and demand is poor.

London—Air Mail Week.

The easier tendency during the past week was due largely to the absence of buyers, who were reluctant to support the market after the recent sharp rise. Sales on China account and resales by speculators continued and offerings met with rather poor resistance, so that prices declined steadily, 24.⅛d. for cash and 24.⅜d. for two months delivery being quoted yesterday. At this level, however, more support was forthcoming, both the Indian bazaars and speculators showing more interest, and as a result, there was some recovery to-day, when 24.7/16d. and 24.9/16d. were fixed for the respective deliveries.

The following were the United Kingdom imports and exports of silver registered from mid-day on the 12th instant to mid-day on the 19th instant:—

Imports.

	£
Soviet Union (Russia) ...	28,320

SUGAR

Calcutta, December 6.

Dull and easy conditions have prevailed in the sugar market during the current week. Due to the recent reduction in c.i.f. Indian prices by Java the market has ruled very easy and prices on the whole are showing a sagging tendency. Due to pressure to sell the seasonal production and the slackened demand from the upcountry centres the tendency of the market is easy.

TEA

Calcutta, December 6.

Sale No. 25 was held on 3rd and 4th December when 21,500 packages of tea leaf with export rights and 7,100 packages of tea leaf and 8,300 packages of tea dust, both for internal consumption, were sold at an average of annas Rs. 0-8-10, Rs. 0-5-3 and Rs. 0-4-6 per lb. respectively. In case of tea for export the price was lower by three-quarters of an anna as compared with the previous year. Whereas the leaf for internal consumption was asked at pies four higher over the last years sales, Dusts were, however, easy by eight pies per lb.

The export market on the whole was steady, and the improved demand noticed at the last sale was sustained. Leaf goods specially Orange Pekoes were in good demand. The enquiry for internal consumption was also quite good and prices both for leaf and dust were fully maintained. Dusts, particularly those below 5 annas per lb., were in good demand.

The following are the full particulars of Sale No. 25.

Tea with Export Rights.

	1934	1933
Offered	24,574	19,669
Sold	21,590	19,185
Average	0-8-10	0-9-7

Tea for Internal Consumption.

LONDON

On Monday November 19, 29,490 packages of Indian grades offered came in for good all-round competition. Common sorts were in especial request and prices for these were very firm at last week's level. Mediums, however, in some cases were not so strong and were slightly below previous rates.

The balance of the week's supply on Wednesday comprised 22,588 packages. Bidding for these was generally keen, but prices were rather easier, the decline in some cases amounting to ¼d. per lb.

At the Ceylon auction on Tuesday offerings amounted to 17,550 packages or substantially less than last week. The market proved strong, notably for fannings, and in many instances an improvement of ¼d. per lb. was experienced. Some increase in demand for tea for export was also evident.

There was good demand at the Java sale for the increased supplies, with the exception of tippy sorts, which were inclined to be irregular. Dusts were easier to the extent of about ¼d. per lb.

The London Tea Brokers' Association's average figures for this week's sales, with the usual comparisons, are as follows:

	This week	Last week	Corresponding sales 1933
	s. d.	s. d.	s. d.
N. India	0 11.96	1 0.10	1 0.83
S. India	0 11.45	0 11.51	1 1.23
Ceylon	1 1.73	1 2.15	1 3.28
Java	0 10.30	0 10.29	0 11.05
Sumatra	0 9.21	0 9.57	0 10.08
Nyasaland	0 10.83	0 10.69	0 10.87

The Northern India district averages are: Assam, 1s. 0.24d. against 1s. 1.38d. at the corresponding sales last year; Darjeeling 1s. 1-27d. against 1s. 1.77d. Dooars, 11.48d. against 1s. 0.31d. Cachar and Sylhet 11.09d. 11.54d.

At the London auctions on London December 2, 7,500 packages of Java and other teas (including Sumatra) were submitted for sale.

There was a good general competition at firm rates.

The following were the lowest prices fetched during the day's auctions:—

Common Pekoe last auction 9d., to-day's auction 9d. lb.; Common Broken Pekoe last auction 8½d., to-day's auction 8½d. lb.; Common Orange Pekoe last auction 9½d., to-day's auction 9⅜d. lb.; Common Broken Orange Pekoe last auction 9d., to-day's auction 9d. lb.; Common Broken Pekoe Souchong last auction 9¼d., to-day's auction 9¼d. lb.

The following were the value prices:

Clean Common Pekoe last auction 9⅜d. to-day's auction 9⅜d. lb.; Clean Common Broken Pekoe last auction 9⅛d., to-day's auction 9⅛d. lb.; Clean Common Orange Pekoe last auction 11¼d., to-day's auction 11¼d. lb.; Clean Common Broken Orange Pekoe last auction 9⅛d., to-day's auction 9⅛d. lb.; Clean Common Broken Pekoe Souchong last auction 9⅜d., to-day's auction 9⅜d. lb.

At the London auctions on December 3, 31,000 packages of Indian tea were submitted for sale.

There was a strong demand at generally firm rates owing to increased restrictions.

The following were the lowest prices fetched during the day's auction:—

	Last auction.	To-day's auction.
	lb.	lb.
Common Pekoe	10⅜d.	10½d.
Common Broken Pekoe	10⅜d.	10⅜d.
Common Orange Pekoe	10½d.	10⅜d.
Common B. O. Pekoe	11d.	10d.
Common B. P. Souching	10¼d.	11d.

The following were the value prices:—

Clean Common Pekoe	10⅞d.	11d.
Clean C. B. Pekoe	11d.	11⅛d.
Clean C. O. Pekoe	10⅞d.	11⅛d.
Clean C. B. O. Pekoe	11d.	11⅛d.
Clean C. B. P. Souching	11d.	11d.

At the London auctions on December 4, 18,200 packages of Ceylon teas were submitted for sale.

There was keen competition, particularly for lower descriptions.

The following were the lowest prices fetched during the day's auction:—

	Last auction.	To-day's auction.
	lb.	lb.
Common Pekoe	10⅜d.	11d.
Common Broken Pekoe	11d.	11⅛d.
Common Orange Pekoe	10⅜d.	11d.
Common B. O. Pekoe	11⅛d.	11⅛d.

The following were the value prices:—

Clean Common Pekoe	11d. 11⅛d.
Clean C. B. Pekoe	11d. 11⅛d.
Clean C. O. Pekoe	11d. 11⅛d.
Clean C. B. O. Pekoe	11⅛d. 11d.

Average Prices

The following were the average prices of tea in the London market during the week:—

Indian Tea (Northern) last week 11.96, this week 11.66d. lb.; do. (Southern) last week 11.45d., this week 11.50d. lb.; Ceylon Tea last week 13.73d., this week 13.39d. lb.; Java Tea last week 10.30d., this week 10.69d. lb.; Sumatra Tea last week 9.21d. this week 9.31d. lb.

Soviet Tea

The Soviet tea crop this season is estimated at thirteen million pounds of green tea from 86,000 acres. Twenty-one tea factories were built and they produced 15,00,000 pounds of finished tea last year. It is claimed that they were doubled the production this year.

EXPORTS

Exports from Northern India from 1st April, 1934 to 4th December, 1934.

	Season 1934-35.	Season 1933-34.	Season 1932-33.

FINANCE ABROAD.

(*Continued from page 1451*).

crisis included M. Francqui as Minister without portfolio. This lent itself to two different interpretations. It might be interpreted, on the one hand, as showing the readiness of the Cabinet to give due consideration to devaluation. Equally, it might be interpreted as a demonstration of the weakness of the devaluationists. But now it would seem that M. Francqui himself has been consulting foreign countries on this question. It need hardly be said that both England and America have pronounced against such a course, for their interests lie in the gold standard countries continuing as long as possible with their over-valued currencies. But that Belgium has been giving consideration to the question is really significant. It is obviously impossible for a country so placed to defer its decision on this vital point, especially when America and Britain have been keeping their way to devaluation still open. While these two countries can wait and watch, the hands of Belgium might be forced at any time. And therein lies the extremely precarious nature of the present stability of the international exchanges.

SOUTH INDIA.

(*Continued from page 1477.*)

paddy was almost unsaleable even at dead low levels of price. It is, therefore, a matter for gratification that the newly created Marketing Board is concentrating its attention on the problem of rice in the South. More than a week ago, the Marketing Board met for the first time and formulated definite proposals for submission to Government. The Board decided to draw the attention of the Government to the need for prohibting the importation of foreign rice and the regulation of imports from Burma by the adoption of a definite quota or some similar expedient. The Board was also interested in the question of the facilities, which the Railway should afford for the free movement of rice from the heavy rice-growing areas in the South and in the Andhra districts to the other parts of the province. The suggestion which found favour with the Committee and the railways, and which should also be welcomed by the rice interests, is that the railway freights should be adjusted to the value of the produce transported. The M. & S.M. Railway had decided to offer specially low rates for the transport of paddy. Specially reduced rates have been already declared for the movement of traffic in the Krishna and the Godavari Delta areas, and it is hoped that the South Indian Railway will follow this example by reducing the general level of rates in Tanjore and other centres in the Southern districts.

Speaking of railways, one is led on to the methods by which the South Indian railway systems are trying to meet the competition of the 'bus. The M. & S.M. Railway have spotted the areas in which buses are in greater vogue, noted the requirements of the people in those areas and have introduced not only lower prices, but also more frequent runnings of trains and a generally more efficient service. The South Indian Railway, characteristically enough, have increased the facilities for the travelling public and have also thrown in the more telling bait of reduced fares.

THE WEEK IN THE EXCHANGES

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, Friday Morning,
November 30, 1934.

Trading in the Stock Exchange continued on a very brisk scale especially in Jute Counter where a large and comprehensive business was put through at further all round advancing rates. Government Securities also ruled remarkably firm and the volume of trade has increased considerably. Cottons, on the other hand, were dull and uninteresting. Some quiet buying is still going on in coal and certain popular stocks only were in favour.

Among miscellaneous Industrials Electric Power Supply Companies shares were very steady, while Engineering Section were definitely firm. Sugar remains fairly steady. The increased activity in Tea Section has been maintained.

Government Securities.—Giltedge section ruled firm and a fairly large business was put through since we reported last. 3½ Per cent Government paper advanced to Rs. 96-6 at one time during the week, but since then there has been a slight reaction and at the time of writing the quotation is Rs. 96-2. Other long-dated terminables were also in strong demand and 4 per cent. loan (1960-70) advanced sharply to Rs. 110-11 from a quotation of Rs. 109-6 during the week end owing to shortage of scrip. 5 Per cent. loan 1945/50 were also in fair demand and the rate improved to Rs. 118-7. 3½ Per cent. loan (1947-50) are now quoted at Rs. 102-10; 1955/60 at Rs. 115-4, 1940/43 at Rs. 109-6 and 1938/40 at Rs. 109-6. Provincial loans were also well-supported. 3 Per cent. new loan 1941 remained very firm at Rs. 100-14. India Government's sterling securities in London are now quoted at £96 ex. dividend. The Bank rate was 3½ per cent.

Fixed Interest bearing Securities.—All better class Industrial Preference shares were in strong demand, but restricted business was due to absence of sellers. Jute Mills Preference shares are now wanted on the basis of a yield of 5 per cent. and on that basis a fairly large trade was completed.

Due to paucity of sellers only a small business was put through in Debentures. 5 Per cent. (1957-87) Calcutta Port Trust was marked up to Rs. 118-8 and 5½ per cent. (1956-85) changed hands at Rs. 112-14.

Other Investment Stocks.—Imperial Bank's shares are now quoted at round about Rs. 1,600 for the fully paid up issues and at Rs. 402 for the partly paid up issues. Central Bank's shares remained steady at Rs. 35-4.

Among Light Railways, Government guaranteed shares remained very firm and there are now buyers on a basis of Rs. 90 but even at this enhanced figure very little scrip is available. Among District Board guaranteed issues Buktiarpur-Bihar may now be placed at Rs. 96. Enquiry was in evidence for Mymensingh-Bhairab Bazar (rebale) Hoshiarpur-Doab, Hardwar-Dehra and Dehri-Rohtas at last listed rates.

Among other Transport shares, Calcutta Tramways (ordy.) remained steady at Rs. 19-12, Indian National Airways again changed hands at Rs. 10. Bengal-Assam Steamship (ordy.) improved to Rs. 228, Calcutta Landing and Shipping changed hands at Rs. 12-12, and India General Navigation and Railway (ordy.) was marked up further to Rs. 111.

Among Insurance Concord of India kept steady at Rs. 1-4; Premium and Triton at Rs. 225.

Cottons.—Only a small interest was evinced in this section which remained definitely weaker presumably in view of the easier feelings obtaining in Bombay, and also owing to uncertain outlook of the industry. Bengal Nagpur (ordy.) was marked down to Rs. 18 from a quotation of Rs. 19 in a day's trading, while Dunbar (ordy.) recovered to Rs. 415 from quotation of Rs. 140 on 'bear' covering. New Victoria (ordy.) was marked at Rs. 1-12.

Coals.—This section disclosed no fresh feature. Only a small quiet buying is all that is going on daily and that is also confined among certain popular stocks. There is no news about the decision of the Government of India regarding the Restriction Scheme.

Bengal improved to Rs. 243, Burrakur (ordy.) to Rs. 13-8, Equitable (ordy.) to Rs. 25-8, New Beerbhum (ordy.) to Rs. 13-4 and Union to Rs. 15. Raneegunge remained sticky at Rs. 30-12, New Manbhum, on the other hand, advanced to Rs. 55-10.

Among low priced stocks Burradhemo changed hands at Rs. 4-8, South Karanpura at Rs. 4-14 and Talcher at Rs. 2.

Jutes.—The boom conditions reported in our last report continued unabated and shares have attained another new high level.

Howrahs and Kamarhattys, the two barometer stocks have attained new marks such as Rs. 61 and Rs. 645 respectively, after a long interval. Other stocks also followed suit. For the sake of comparison we give below to-day's rates of some of the stocks as compared with last week.

Auckland from a quotation of Rs. 244 advanced to Rs. 259; Anglo-India from Rs. 460 improved to Rs. 475; Bally from a quotation of Rs. 225 was marked up to Rs. 230; Belvedere from Rs. 423 advanced to Rs. 430; Champdany Rs. 197 advance to Rs. 210; Dalhousie from Rs. 400 advanced to Rs. 410; Budge-Budge from Rs. 355 was marked up to Rs. 375; Fort Gloster from a quotation of Rs. 630 changed hands up to Rs. 640; Fort William from Rs. 327 improved to Rs. 332; Gourepore from Rs. 675 advanced to Rs. 692; Lansdowne from Rs. 188 advanced to Rs. 195; Lothian from Rs. 314 advanced to Rs. 325; Naihati from Rs. 458 advanced to Rs. 465; Standard from Rs. 365 advanced to Rs. 375 and Union from Rs. 505 improved to Rs. 530. Among rupee 10 stocks Hukumchand was very popular and was marked up over a rupee and a half during

THE TITAGHUR PAPER MILLS COMPANY, LIMITED.

NOTICE is hereby given that the One Hundred and Fourth Ordinary General Meeting of Shareholders will be held at the Registered Office of the Company, Chartered Bank Buildings, Calcutta, on Friday, 14th December, 1934, at 12 noon, for the purpose of receiving the Directors' Report, passing the Audited Accounts for the six months ended 30th September, 1934, and transacting the ordinary business of the Company.

The Share Registers of the Company will be closed from the 4th to 14th December, 1934, both days inclusive.

By Order of the Board,
F. W. HEILGERS & CO.,
Managing Agents.

CALCUTTA, 28th November, 1934.

the course of the week and are now quoted at Rs. 17-12. National was also very firm at Rs. 26-4. Birla kept remarkably steady at Rs. 16-4 and Clive at Rs. 35, Megna from a quotation of Rs. 45-12 jumped up to Rs. 48-4 in a day's trading. Nuddea kept steady round about Rs. 58 and Reliance at Rs. 80-8.

Although the goods markets are very steady the manufacturing profits of the Mills have diminished considerably than that of the last year in view of the higher prices of raw material. Under the circumstances and taking a long view of the situation it is doubtful whether the Mills will be able to maintain their present rate of dividend for a long time. *Hence the present levels of prices for shares appears to be dangerously high.*

Electricals.—More attention was paid to the shares of Public Utility companies and a fair business was put through. Agras are now quoted at Rs. 128, Bareillys at Rs. 138, Benares at Rs. 14-8, Cuttack advanced to Rs. 7-10, Muttra met with a fair demand round about Rs. 10-12 and Upper Jumna recovered to Rs. 11-8.

Engineerings.—A definitely better tone has set in this section.—Burn & Co. (ordy.) sharply advanced to Rs. 320 from a quotation of Rs. 280 during the week-end. Arthur Butler kept steady at Rs. 14-10. Bengal Iron at Rs. 4-4, while Indian Iron and Steel was an excited market and a large business resulted round about Rs. 8-2. Indian Standard Wagon (ordy.) was marked up further to Rs. 59-8 Tata Iron & Steel (ordy.) recorded a deal at Rs. 104 and Deferreds were marked at Rs. 453-12.

Sugars.—Sugar shares kept fairly steady. Balarampurs are now quoted at Rs. 19, Carew & Co. at Rs. 21-4, Cawnpore (ordy.) at Rs. 35-8, Champaran at Rs. 25, New Savan at Rs. 13-8, Ryam at Rs. 38-4 and Samastipur Central at Rs. 11-6. A fair business was put through in Raza Sugar up to Rs. 137. Murree Brewery kept steady at Rs. 197.

Miscellaneous.—A fair turnover resulted. Paper shares were asked for and India Paper Pulp advanced to Rs. 149. B. I. Corporation (ordy.) recorded a few deals round about Rs. 2-6, Britannia Biscuit was quoted at Rs. 7-12, Ganges Rope was marked at Rs. 265, Great Eastern Hotel at Rs. 80 and Indian Wood Products at Rs. 36. Midnapore Zemindary (ordy.) kept steady at Rs. 75 and Howrah Oil at Rs. 13. Burma Corporation was lower at Rs. 8-6 on London advices, while Bengal Aerating Gas was marked up to Rs. 82.

Rubbers.—A moderate number of dealings was put through in Straits Dollars Rubber shares at hardening rates.

Teas.—The improvement manifested in this section during the last two weeks has been maintained and a fairly large business was put through at advancing rates. Towards the close a slight profit-taking was noticeable. Bishnauth, Central Cachar, Ethelbarrie, Gangaram, Hasimara, Hattikhira, Huldibari, Naga Hills, New Terai, Pathemara, Rutema, Serujaon and Tezpur were popular features.

BOMBAY STOCK EXCHANGE

(*By Wire*)

(From Our Correspondent)

Bombay, Thursday,
December 6, 1934.

Money Market.—Money was better at the beginning of the week with Call Money quoting 1½ per cent.

Exchange.—The exchange market was steady with Banks selling T.T. at 1s. 6 3/64d. till February; 1s. 6 1/32d. for March-April and 1s. 6d. for May-December. Banks are buying 3 months bills at 1s. 6 1/8d. for December-January-February.

Securities Market.—In spite of quiet and easier London advices, reduction in yield on Post Office Cash Certificates as announced last week, had a bullish effect on the market and many of the scrips have closed much higher than last week's closing quotations. 3½ per cent. paper which was around Rs. 95 firmed up to Rs. 96-15 and closed at Rs. 96-1 to Rs. 96½ on good speculative buying in spite of weakness in India sterling loans. 1945-55 Tax free on investment demand improved from Rs. 117-15 to Rs. 118-8. At current levels we find 1945-55 gives attractive redemption yield of 3 per cent. tax free, whereas redemption yield on most of the other securities in our market works out only about 2½ per cent. *Since we look for higher levels in securities in general, we believe 1945-55 ought to be quoted at much higher level in the coming weeks.* As mentioned in our previous reports we believe 3½ per cent. paper would reach par gradually. There seems to be very good investment enquiry for 1960-70 with sellers scarce and this scrip has now firmed up from Rs. 109-1 to Rs. 110-10. 1947-50 has improved by five annas to Rs. 102-12 and 3 per cent. 1941 on enquiry around Rs. 100-1. 1955-60 is higher at Rs. 115-2, 1934 at Rs. 105-12, 1935 at Rs. 101-11, 1939-44 at Rs. 108-8, 1940-43 at Rs. 109-8, 1938-40 at Rs. 109-6, 6½ percent Bombay development at Rs. 103-9.

Shares.—The strength in the securities market gave a bullish turn to the share market in general and most of the leading scrips showed good improvement with closing quotations practically the highest of the week.

Textiles.—Textiles were active especially Bombay Dyeings, Central Indias and Swadeshis and these three scrips have shown substantial improvement. Others were quoted better than last week's levels. The strength in cotton on account of President Roosevelt's announcement of continuance of Bankhead Act also imparted bullish sentiment in this section. It is also reported that the Wadia Group of Mills have resolved to work double shift from January. Therefore we still feel leading scrips like Bombay Dyeings, Central Indias, Centuries and Gokaks have further scope for appreciation. Bombay Dyeings improved from Rs. 908-12 to Rs. 935 and Central Indias were done as high as Rs. 340 and closed at Rs. 337-8 showing a rise of nearly 20 points during the week. Centuries were higher at Rs. 320-10, Kohinoors were better at Rs. 221-4 and Gokaks firmed up from Rs. 175 to Rs. 190. Swadeshis were higher by more than 10 points at Rs. 238-2 ; Colaba at Rs. 113-12, Indian Bleaching at Rs. 156-4, Indore Malwa at Rs. 113-2, Lakshmi at Rs. 822-8, Morarji at Rs. 1,470, New Great at Rs. 217-8, Sholapur at Rs. 2,900 and Vishnu at Rs. 1,580.

Hydro Electrics.—This group has also improved with Andra Valleys at Rs. 1,665 and Hydros at Rs. 166-14. Tata Powers on encouraging earning figures closed at Rs. 1,417-8 compared to levels around Rs. 1,350 last week.

Iron and Steel.—This week witnessed a good deal of activity in steel shares on account of speculative buying and bear covering and Ordinaries which were around Rs. 98 were done at the close as high as Rs. 107, though they closed at Rs. 106-4. Deferreds improved to Rs. 470 and are now Rs. 462-8, showing a rise of nearly 40 points. In spite of production figures for November being much less than for the previous month, the market showed an improved at the close. Second Preferences were in keen enquiry and firmed up from Rs. 158 to Rs. 163-8. *The general market sentiment regarding steel shares seems entirely bullish and shares are expecttd to go up further.*

Cements.—Cements were slightly better than last week. Gwaliors showed an improvement of about 7 points and closed at Rs. 112. Indians were higher at Rs. 347-8 and Shahabads at Rs. 342-8, Bundis at Rs. 32-12, Katni Deferreds at Rs. 1,142-8, Ordinaries at Rs. 329-6, Okhas at Rs. 183-12, Punjab Ordinaries at Rs. 23-8 and Uniteds at Rs. 67.

Miscellaneous.—Belapurs have been forging ahead gradually and were done as high as Rs. 267-8, though they closed slightly lower at Rs. 260 on profit-taking. *Belapurs still look attractive and are talked of as reaching Rs. 300.* Bombay Burmas were up by 20 points and closed at Rs. 426-4 and we prefer profit-taking around this level. New shares were quoted at Rs. 142-8. Telephones find good buyers and improved from Rs. 110 to Rs. 118. Bombay Steams were better at Rs. 301-4 and Trams were steady at Rs. 160-10. There is steady buying of Indian Radio Ordinaries and Deferreds around Rs. 500 and Rs. 530 respectively. Constructions were neglected around Rs. 81.

Banks and Insurance.—There is good enquiry for Imperial Bank shares and fully-paid up shares are now higher at Rs. 1,607-8 and partly paid-up shares at Rs. 413-12. Since dividend time is fast approaching, we hope to see Imperial Bank shares showing substantial improvement in prices. Union Banks are higher at Rs. 5-14, Bank of Indias are steady at Rs. 120, Central Banks at Rs. 85 and Bank of Baroda at Rs. 102. New Indias improved to Rs. 40 and Oriental Life is higher by 40 points at Rs. 4,055 ; Vulcans are steady at Rs. 8-8.

MADRAS STOCK EXCHANGE

(*By Wire*)

(From Our Correspondent)

Madras, December 6.

Government Securities.—The securities market was more active during this week. Paper touched Rs. 96-4, fell back to Rs. 95-13, but recovered again. Most of the business was speculative and was confined to Bombay operators. Some enquiry was noticeable for 4 per cent.

SITALPORE SUGAR WORKS LTD.

NOTICE is hereby given that the Second General Meeting of the Shareholders will be held at the Office of the Company, Indian Press Building, Allahabad, on Sunday, the 16th December, 1934 at 1 p.m. for the purpose of receiving the Director's Report and Accounts for the period from 27th March, 1933 to 30th June, 1934 and to declare a dividend; also to transact the ordinary business of the Company.

The share Transfer Books of the Company will remain closed from 7th December to 24th December 1934 both days inclusive.

By Order of the Board,
H. K. GHOSH,
T. N. DUTT,
Managing Directors.

Calcutta, 1st December, 1934.

1960-70 loan and 5 per cent. 1945-55 loan both of which hardened to Rs. 110-8 and Rs. 118-8 respectively. Business in short and medium-dated loans excepting Treasury Bonds at Rs. 102-11 was negligible. Mysore Loans continued steady with good buyers for practically all the loans but enquiry for Port Trust, Municipal and Joint Stock Company Debentures has been better during the week than before but unfortunately, lack of scrip has hampered business excepting a transaction in Nilgiri Neerugundi debentures at Rs. 101.

In Preference shares Spencer & Company "A' preference was done at Rs. 10-12 and "B" preference at Rs. 13, Tata Iron and Steel second preferences at Rs. 161-8, East India Distilleries preferences were also a popular market.

Banks.—These shares were steadier Imperials fully paids quoted Rs. 1,603 and the Contributories Rs. 406 but there were no transactions of note in this section excepting in Indo-commercial Banks at Rs. 85.

In Public Utilities, attention was centred on Bombay shares, Tata Powers being a popular feature. These, however, rose to Rs. 1,405 closing slightly lower. Rangoon Telephones were in request at Rs. 13-8.

Mills.—Textiles were easier with Buckingham and Carnatics done down to Rs. 207, Madura Mills were marked down to Rs. 32 buyers excepting Gokaks which improved to Rs. 185 on Bombay support.

Cement.—This section was active with prices marked up all along the line. Business was restricted as attention was centred on steel shares.

Sugars.—An easier tendency was noticeable in this section with sellers in all the scrips. Deccan old shares were offered at Rs. 290 without attracting buyers. Belapurs were firm and rose to Rs. 260.

Rubber.—The rubber market was lifeless.

Tea.—Some interest was shown in these shares on the announcement of the Restriction Scheme for the next year. Peermades have moved up to Rs. 25, Peria Karamalais to Rs. 40 whilst Devasholas had buyers at Rs. 8-4.

Miscellaneous.—In this section Tata Steel ordinary shares and deferreds monopolised the attention of the operators. There was a steep rise in these the ordinaries quoting Rs. 107 and the deferreds Rs. 468.

LONDON STOCK EXCHANGE

On the Stock Exchange during the week under review most of the markets have been quiet and featureless. There was not much activity in the gilt-edged market and it attracted less interest. Indian Loans were steady throughout. Home Funds were easier at first but firmed up later on. Among other sections Minings were the most attractive feature of the Stock Exchange and attention was chiefly centred around them. Teas also showed some improvement and were steady at higher levels. Rubbers were unchanged. Oils and Home Rails were irregular. Other industries were featureless and serveral issues declined in the absence of support.

NEW YORK STOCK EXCHANGE

Earnings for the third quarter of many corporations were less than like 1933 period. But the nine months figures were better than last year's. There are already certain signs of revival. The Chairman of the U. S. Steel Corporation said that he could see indications of gradual continued betterment. Washington also is optimistic regarding the near term business outlook. Govt. Banker Corporation is also expected to hasten business recovery.

For the last one week the market was steady with total turnover on some days at 2 millions ; but it closed slightly lower. U. S. Steel Corporation was working at 25½ per cent. of its capacity. Brokers Loans went up to 63 million dollars. Retail sales are increasing. Farm income shows an increase of 30 per cent. over last year's. Automobile industry is expecting expansion of sales by introduction of new models. We recommend Western Telegraph for capital appreciation. National distilleries are attractive for their year's earnings are estimated at 8 dollars per share. Dividend of 1 to 1½ dollars are likely in the New Year. Other attractive shares are the Preferred shares of Electric Bonds and Shares, American Radiator, Common Montgomery, Ward Common and General Motors.

BOROAH TIMBER CO., LTD.

Report for the year ended 30th June, 1934.

Trading for the year ended 30th June, 1934, resulted in a profit of Rs. 5,852-0-2 after full provision for all charges and depreciation. To this have been added the sums of Rs. 13,045 and 13,000 in respect of Commission foregone by the Managing Agents for the years ended 30th June, 1933 and 1934, thus increasing the profit to Rs. 31,897-0-2 for the year under review. This sum has been applied in reduction of the previous year's debit balance of Rs. 57,381-13-0 to Rs. 25,484-12-10.

Reserve Fund.—The Directors recommended that the sum of Rs. 70,000 as per balance sheet be applied as follows:

	Rs.	A.	P.
Writing of the debit balance of Profit and Loss account as above	25,489	12	10
Redemption of forest concession ...	44,515	3	2
Total ...	70,000	0	0

Mayurbhanj Forests.—Forest working were increased during the period under review mainly owing to larger orders for special size crossing sleepers. Prices for special sleepers have recently much improved. Railway freight on the Mayurbhanj Light Railway has been reduced considerably which will enable the company to produce again a large quantity of sleepers from N. S. Range.

R. N. Mukerjee, T. C. Barooah, A. T. Tailor, T. Leslie Martin.—Directors.

Martin & Co.—Managing Agents.

SITALPORE SUGAR WORKS LIMITED.

Report for the period from 27th March 1933 to 30th June, 1934.

Accounts.—The revenue account shows a profit of Rs. 1,08,444-1-8 as the result of three months crushing. After deducting Debenture interest Rs. 16,410-6-11, Depreciation Rs. 26,168-8-0 and Reserve for sugar Excise duty Rs. 32,342-9-3 and adding Rs. 3,871-12-3 being miscellaneous receipts, there is an available balance of Rs. 37,364-5-9 for disposal which the Directors recommend to be distributed as follows:—Reserve Fund Rs. 5,000-0-0. Dividend at 6% free of Income-Tax, payable on all shares, proportionally on the amount paid on each share from the date as they were allotted and called up Rs. 24,000-0-0. Reserve for Income-Tax Rs. 6,000-0-0, carry forward to next year Rs. 2,364-5-9.

Stock of sugar has been entered at centraded and market rates. All the sugar has been sold out at this date. The erection of the Mill was completed by the end of January and the crushing continued upto the beginning of May. The Mill was fortunate to have escaped the disasters of Earthquake and Flood. The machinery worked efficiently and the quantity of sugar fetched fair process.

Additional machinery has been installed to increase the output.

WORLD OF INDIAN FINANCE

Calcutta, December 14.

Money conditions have regained in the latter part of the week something of the stringency of last week. The ease, which set in towards the end of last week persisted in the first two days of this week also ; but Wednesday saw an access of tightness which has not quite died down upto the time of writing. There has thus been an undertone of firmness in money rates. It is not clear how much of this tightness can be attributed to the improvement in trade. A scrutiny of the figures contained in the weekly statement of the Imperial Bank of India encourages the belief that at long last trade requirements are making their claims on the surplus funds in the market. The drop in the cash percentage of the Imperial Bank from 33.29 to 28.66 in the week ending December 7, is too sharp to escape notice. The cash percentage of the Bank has kept during the last two months about the level of 30 per cent. ; and the only instance in which it marked a serious fall from that level was the week ending November 9, when the cash percentage fell from 30.81 to 27.83. But in that week the conditions may be regarded as somewhat exceptional, in as much as both Public Deposits and Other Deposits marked a sharp fall and the Imperial Bank had, at the same time, to make an advance of Rs. 3 crores to the Government. The items on the assets side of the Bank's statement in that week showed very little deviation from the figures of the pervious week. In this week, too, the same might be said. Instead of a fresh advance of Rs. 3 crores as in the week ending November 9, there has been an increase of Rs. 3 crores in the Ways and Means Advances to the Government. It will be remembered, that commenting on the decrease in the Ways and Means Advances in the two weeks previous, we observed last week that this process could not continue, and that the Government would find it necessary in the first week of December to increase their accommodation from the Bank. This increase, which is now published in the weekly statement of the Bank, together with the fact that there is no significant increase in loans or cash credits or bills, shows that the fall in the cash percentage of the Bank does not reflect any considerable increase in the volume of trade demand. It is possible that the banks have already set to on the operations necessary for the window-dressing of the year-end. We shall have more to say on this at a later stage ; but it may be mentioned here that this, together with the temporary maladjustments in the market, have helped to continue the period of stringent money. That the stringency is felt all round is testified by the very large applications for sterling which were made on the last tender day, when the market applied for £6,515,000 at 1s. 6 1/16d., and the allotment had necessarily to come as low as 15½ per cent.

The results of the weekly auctions of Treasury Bills also bear the impress of comparatively tight money conditions. The amounts applied for by the Bank show a falling off from Rs. 254 lakhs to Rs. 225 lakhs, the average rate of accepted tenders too has risen to the former level of Rs. 1-7 per cent. Sales of intermediates have dropped to Rs. 36¾ lakhs from Rs. 65 lakhs in the previous week. The two successive weeks of low sales of intermediates would seem to suggest that intermediate Treasury Bills are being over-powered by rival attractions for the investors. The enormous activity in the giltedge and share markets tends to strengthen such an apprehension. It is worth the while considering whether in the event of the present tendency of low sales of Treasuries continuing, the ways and means position of the Government would not be appreciably upset. For, the total amount of maturities still remaining to be paid off by the Government in December comes to about Rs. 7½ crores. As against this, there can be at best, only two tender days in what remains of December. The Christmas holidays would not admit of a third tender day. On the supposition that the Government get only Rs. 3 crores by the auctions, there would be a large gap to be made up by sales of intermediates. The rate at which intermediate bills are being taken up by the market, does not promise any large influx of funds into the Treasury. It should also be remembered that December is not one of the good months of the year from the standpoint of the Government's revenue. The outgoings would be larger than the incomings ; and when the Government have already a ways and means advance outstanding of Rs. 5 crores, there cannot possibly be sufficient surplus for the purpose of paying off the maturities of Treasury Bills. It is to be wondered whether the Government would carry a largely unbalanced ways and means position into the New Year. Considering this position, and considering also the ineffectiveness of the offer of

Treasuries on tap, it is a question whether the Government might not increase the amounts on offer on the tender day from Rs. 1½ crores to Rs. 2 crores.

The giltedge market has gone through another week of extremely active conditions. The London market, it must be noted, is not acting any longer as a kind of wet blanket on the Rupee securities. Latest reports from London show that the giltedge market has been active again. It is believed, in certain quarters, though we for our part would hardly give credence to it, that the London market was, for a time, feeling somewhat lukewarm to Indian securities waiting to see how Parliament would receive the report of the Joint Parliamentary Committee. It is said that Indian securities in London were somewhat dull between the publication of the Joint Parliamentary Committee and the acceptance of the Government's policy by a record majority in the House of Commons. The inference is, therefore, drawn that the market had its own doubt in this matter and that it was not till the Government demonstrated its large support in the House that the confidence of investors was revived thus helping a rise in India sterling paper. 3½ per cent. sterling paper quoted £98 at the end of Thursday's trading. We hold the view that the quietness in Government of India's sterling securities was not peculiar to Indian securities but was common to the whole of the giltedge market in London.

The Indian giltedge market has, however, left behind the stage in which it played, so to say, second fiddle to the London market. Despite the calm in London, India Rupee securities have again shown a big rise and 3½ per cent. Government paper touched as high as Rs.98-4 during the week. There has since been a setback in the price to as low as Rs. 96-12. At the close of Friday 3½ per cent. paper is quoted at Rs. 97-2. The setback which occured after the peak of Rs. 98-4 may be attributed to sales on account of profit taking. One feature of the profit taking of the week deserves special mention. It is reported that certain banking institutions have tried to realise the very large appreciation in the value of their giltedge securities in order to show the balance sheet and profits to the fullest advantage. With this view the banks have unloaded large blocks of securities on the market. It is estimated that nearly a crore and a half of securities have their changes in this manner. The implications of this movement are, indeed, very notable. It shows, in the first place, that the banks which started to realise the profits on giltedge had the confidence that they would not be causing a landslide in giltedge. For without such confidence no bank would take such a course, for banks would have to consider the effects of any sharp fall in prices of Government securities. Secondly, that such a volume of scrips could have been sold in the market without bringing about a serious setback, shows that the present position of the market is such that it can well stand up to such sales. It is even more significant that the recovery from the low prices caused by such sales have been so sharp.

So far the future prospects are concerned, it is quite likely that the profit taking movement will continue. Towards the end of the year there is bound to be quietness in the markets. The stock exchange will be closed for a number of days and the usual activity will be considerably reduced. The stringent money conditions might be prolonged owing to the activity of banks in regard to their balance sheet requirements and this might conceivably knock off another as. 8 or so from the present level of giltedge prices. But these are admittedly transient factors. None of them have got any permanent significance. It is not to be forgotten that the rise in giltedge durig the last fortnight has been kept up in the face of extremely stringent money conditions. While thus recognising that stringent money does not necessarily pull down the level of giltedge prices, it is well to recognise that the money outlook also is better than most people would think at the present moment. The stringent money conditions will be appreciably relieved when the last quarter of the current financial year is ushered in. It is well known that the last quarter is a period in which the Government have substantial surplus of revenue over current outgoings. It might then become possible for them to reduce their offtake of Treasury Bills. Though the maturities in January and February are as heavy as in December, the revenue surplus would enable the Government to make less demands upon the market than they are doing at present. The banks which have now been selling their securities of giltedge would have to replenish their portfolios, while on the one side easier money conditions are being provided, there will be a large buying movement which will do more than maintain the current level of giltedge prices.

The exchange market was again unrelieved b any developments of importance. There were, indeed, a few bills showing and a reappearance of remittance enquiry. But the remittance enquiry was not equal either to the demand for money on the part of banks, or for bills. There is not any abundance of either ; and the Rupee-rate has remained steady owing to the strong undertone of money rates and the widely felt need for cash.

The closing rates are : 1s. 6 1/32d., T.T. for December-April T.T. with 1s. 6 3/64d., available for interbank May-October.

Bills may be quoted: 1s. 6 1/8d., December-April and 1s. 6 3/32d., May-October.

Call money was quoted from 1 per cent. to 2 per cent. Onemonth 1¼ twomonth 1½ and threemonth deposits 1¾ to 2.

POSITION OF THE LIRA.

Thursday evening.

The centre of interest in international finance has shifted during the week from the triangular contest of the dollar, franc and sterling to the lira. Drastic laws have been announced calling on all holders of foreign credits to hand over the same to the Government on pain of very heavy sentences. The meaning of such laws in a country like Italy is unmistakable. Even if the Duce expressed a mere wish, it is tantamount to a command. But when laws are promulgated and heavy penalties are imposed, it may be taken for certain that the Government do not intend to allow any leakage of foreign credits. There is, indeed, the greatest need for the utmost conservation of Italy's gold and gold reserves. For a long time the position of the lira has been subject to grave strain from all quarters. From the beginning of the year it has been subject to bear raids; and the intrinsic position of the Italian currency is not calculated to command unwavering confidence in its stability. For the usual sources of strength for the lira had begun to dry up. There is in the first place, the handicap which all gold standard countries are subject to in the matter of their export trade. But in the case of Italy not only has the export trade been subject to such severe handicaps, but the invisible exports, which figure so largely in Italy's balance of payments, had begun to dwindle owing to the over-valuation of the lira. The two important items of invisible exports are tourist traffic and the remittance from Italians settled in foreign countries. The tourist traffic must necessarily suffer, owing to the very small amounts of lira which foreigners would get in Italy in exchange for their national currencies. It is learned that the number of tourists going to Italy has not shown any large decline. People still take their holidays in that romantic country. The lure of Italy for the leisured rich has not weakened. But the amounts that foreign tourists spend in Italy has undergone a serious shrinkage; and this has its effects on the balance of payments. As for Italian emigrants abroad, they have always retained, even in their foreign domicile, love for their mother country. Their usual frugality helps them to save a great deal; and they have been in the habit of remitting at every short interval their savings to their relations at home. And what is more, they seize every opportunity of returning to Italy for a short stay and spend their savings within the country. But now the over-valuation of the lira has put a severe obstacle in the way of this tendency. When Italian emigrants know that, despite all their frugality and self-denial, the amount of lira which their relatives can get at home is very little, they can hardly be expected to show the same zest for the remittances. The same applies also to their habit of taking short holidays in Italy. These holidays have become so expensive that Italians will not return home as often as they used to.

The Government were keenly conscious of the adverse changes that were coming over the national balance sheet and the position of the national currency. Very early in the year they have been making attempts to set right the position. Official support to the lira has been extended on many occasions during the year. And this is natural; for so long as the Government are wedded to the policy of maintaining the stability of the lira and continuing on the gold standard, every sign of weakness ought to call for official support. But the responsibility of the Government in regard to the national currency is not discharged merely by lending occasional support to the exchanges. Far deeper questions of economic policy are involved. It is well known that one of the features of the austere creed, which inspires the Fascist Government in Italy, is the almost fanatical devotion to the stability of the national currency. At a time when it would have suited Italy, as well as it suited France, to devalue the national currency, Signor Mussolini set his face strongly against it; and the lira has been almost the only European currency which has resisted the temptations of artificial depreciation.

More than this decision is the determination to stand by its implications. The Duce has had little compunction in calling upon the various interests to make the sacrifice necessary for the equilibrium of both costs and prices and external and internal prices. Considering the rate at which the general level of world prices has been dropping during these years, one can easily imagine the extent to which the Italian people should have had to sacrifice their interests in order that the lira could be saved the necessity of devaluation. In any other country in the world, the process of deflation, which the stability of the lira entailed in these years of depression, would have created the most widespread and prolonged civil disorders. But the stern Fascist Government has been able to keep the whole situation in hand. Wages were cut down with as much ease as any act of administration routine. At the same time, wherever labour could establish a case for increase, the Government had shown themselves equal to securing such increase from employers, however recalcitrant. They have also extended generous support to business institutions at home, on which the deflation has descended with undue heaviness and to that extent the Government are less fitted now to take upon themselves the problems of private business.

Thus the present strain on the lira comes after a period of prolonged privations for the Italian Government and the Italian people; and the question is what is the extent to which Italy can go further on this path of reckless devotion to the gold standard? In other words, Italy to-day has all the problems which result from the failure to make a timely devaluation of the currency. She has to-day, as Britain in 1931, an adverse balance of trade, heavily handicapped exports, a deficit budget, prices in disequilibrium, a continous bear raid on the currency and a dwindling gold reserve. Of these, the budgetary difficulties are perhaps the least. For unlike France a year ago, Italy's difficulties of the budget have not extended to the ways and means position. The Government are still able to raise their requisite monies. Only in Air Mail week the Italian Government had raised a 4 per cent. loan of 2,000 million lire, an issue which was a tremendous success. Though the lists were

kept open only for two days, the loan was oversubscribed; and it is believed that according to Italian practice allotments would be made for very near the full amount of application, that is, well in excess of the original stipulated amount. This shows that the Government can still command the confidence of investors within the country and that the Government would not be obliged to tackle the problem of the budget along with other problems of currency at the same time. In other words, the Italian Government can take their own time and concentrate their attention on the more immediate and pressing problems of exchange. It is believed that the purpose of the New Loan is to reduce the Government's outstandings with the Bank of Italy and thus bring about a reduction in the note circulation. If the Government utilised the greater part of this loan for this purpose, it would bring about no inconsiderable reduction in the volume of currency.

That they are still on the deflationary path is also seen in the increase in the rate of the Bank of Italy from 3 to 4 per cent. a fortnight back. An increase in the bank rate has been effected with a view to afford strength in the exchanges. In the case of Italy, it is far from likely that foreign funds would be attracted by the higher interest rates prevailing. It might tend to discourage the flight of funds. In any case, the direct strength to the lira will not be considerable. It is reported that the rise in the bank rate has affected the spot rates and that the discount on forward rates shows clearly that it has not succeeded in resuscitating the confidence in the lira. In such circumstances, the rise in the bank rate is to be interpreted only as an action in accordance with orthodox principles. It may also be that through the higher bank rate the Italian Government are trying to effect a contraction of currency and a fall in prices, which would ultimately restore equilibrium and reduce the strain on the lira. But it is obvious that this is a highly circuitous path.

The present predicament of the lira brings out in sharp relief the weak points in all the gold currencies. By sticking blindly to the gold standard, they have made the drastic process of inflation necessary. None of the gold standard countries have altogether neglected to effect deflation; and to Italy must go the credit for the most sincere pursuit of this policy. She has not shied either at a contraction of currency and the fall in prices or the more formidable step of a cut in wages. And all these have not sufficed to remove the strain on the lira. In the case of Italy, the utter worthlessness of the mutual support which the Gold Bloc countries pledged themselves to in their last conference is also well brought out. It is calculated that Italy will have little or no advantage to derive from the closer trade relations among the Gold Standard countries, for her exports to them form only 19 per cent. of her total exports; and the contemplated increase of trade within the Gold Bloc by 10 per cent. would increase Italian exports by less than 2 per cent. And against this is to be set the loss in trade with non-gold countries as a result of possible retaliatory measures. Nor are there much chances of Italy being able to procure a loan from France for the sake of maintaining the lira. For Italy is not likely to acquiesce in the political conditions which always accompany such loans. The gravity of the present position may be realised when it is said that the reserve ratio of the Bank of Italy has already reached the legal minimum of 40 per cent. There is thus a clear-cut question between devaluation and the most drastic piece of deflation that could ever be thought of. But there is a rigorous limit to deflation. Will Italy exceed it? Is the stability of the lira worth the prices of all the sufferings of deflation?

TREASURY BILLS.

The Controller of the Currency notifies that tenders for Rs. 1½ crores of three months Treasury Bills were opened on Tuesday, December 11. The total amount offered was Rs. 2,25,50,000. Tenders at Rs. 99-10-6 were accepted in full and those at Rs. 99-10-3 were allotted approximately 66 per cent. The total amount accepted was Rs. 1½ crores, the average rate of accepted tenders being Re. 1-7-0 per annum.

Tenders for Rs. 1½ crores of three months' Treasury Bills will be received on Tuesday, December 18. Successful tenderers should make payment on Friday, December 21. Other conditions are as usual.

Three months' intermediates will be sold from December 12 to 17 at Rs. 99-10-9 per cent. subject to the conditions previously announced.

Three months' intermediates sold from December 5 to 10 amounted Rs. 36,75,000.

STERLING TENDERS.

The Controller of the Currency notifies that on Wednesday, December 12, tenders to the amount of £6,515,000 at 1s. 6 1/16d. were received and allotted approximately 15 1/3 per cent.

£1 million will be offered for tender on Wednesday, December 19, on the same conditions as previously announced.

PUBLICATIONS OF THE LEAGUE OF NATIONS

JUST OUT; "STATISTICAL YEAR-BOOK OF THE LEAGUE OF NATIONS" 1933-34

270 pages ... ... in wrappers Rs. 6 14 0
in cloth Rs. 8 8 0

This is the most complete and authoritative international compilation of official statistics regarding the economic, financial and social activities and the population of all the countries of the world.

These statistics including Vital Statistics, Labour Conditions, Production, International Trade and Balances of Payments, Transport, Public Finance, Monetary and Banking Statistics, Prices, Conversion coefficients for weights, measures and currencies, have been brought up to the end of 1933 or the beginning of 1934 and have been reduced, whenever desirable, to a common measure.

The present edition marks an improvement on its predecessor in the abundance of its information on various matters of great topical interest, such as public finance and the distribution of population by age, groups and occupations, etc. Another new feature consists of the tables on the production and use of nitrogen and of index-numbers of employment.

"REVIEW OF WORLD TRADE", 1933

A presentation and analysis of world trade in 1933 — about 60 pages ... ... Price Rs. 1 12 0

This volume compares the trade of the world of continental groups and of individual countries in 1933 and in recent years. It shows the contribution of each country to the total, the changes in the direction of trade and in the relative importance of the groups of commodities of which it is composed. The analysis demonstrates that, while the value of trade diminished again in 1933, the quantum increased, mainly owing to the larger exports of raw materials; exports of manufactured products were, however, also slightly higher than in 1932. Special attention is devoted to the trade in the most important crude materials and foodstuffs. An annex contains revised indices of the prices and quantum of the rade of individual countries.

RECOVERY OF AGRICULTURAL PRICES

The improvement which has occurred in recent times in the prices of agricultural produce is a welcome change from the dull and dreary position of world economy in the period of the depression. The frequent talks of restriction of output, from which no commodity market has ever been altogether free, would induce people to think that the better price and the greater balance which they indicate are due to artificial forces and conscious policy. The mitigation of the disequilibrium is due only in part to Man; and the greatest part of the credit must go to Nature. Owing to the vagaries of the weather, the crops of wheat, cotton, maize, rye, barley and oats have all been below normal; and though, in many cases, the resulting short crops have involved hardships for the farming classes, there can be no doubt that the shortage of this year will ultimately be to the advantage of the agricultural population. No Government—and much less the Governments of the nations taken together—has been able to raise prices in the face of large swollen stocks which were accumulated in the years of depressed economy and plentiful harvest. Where Man has failed Nature has again lent a helping hand.

* * *

The two foremost instances of agricultural commodities, which have improved in prices in recent years, are wheat and cotton. Fortunately they are also the most important of agricultural commodities; and the incidence of a rise in their prices is most widespread. Minor argicultural products like rye, barley, oats and maize have also pulled up a great deal, though, in some cases, the prices in 1934 compare favourably only with the prices of 1933 and not 1932. According to the International Review of Agriculture published by the International Institute of Agriculture, Rome, the total production of wheat in the Northern Hemisphere in 1934 is estimated at 3,266 million bushels compared with 3,628 million bushels in 1933 and an average of 3,715 million bushels in the quinquennial period, 1928-32. In Europe and North America the 1934 production is at a lower level; and only in Asia and North America has there been an increase. The European harvests, excluding the Russian, are reported to have yielded 1,477 million bushels. Though this marks a substantial fall from the 1933 crop of 1,749 million bushels, the current output is still above the 1928-32 average of 1,438 million. The North American production shows the course of the decline from 810 million bushels in 1933 to 786 million in 1934. But it must be remembered that even in 1933 the harvest was very poor, compared to the average of 1,283 million bushels in the five years 1928-32. In the Southern Hemisphere the estimated area shows a fall of 6 per cent. in Argentina and 13½ per cent. in Australia. The harvest of rye, barley and oats are all distinctly below those of last year and the five year averages, as the following table shows:

Average

(million bushels)

	1928-33	1933	1934
Rye ...	958	1,039	877
Barley ...	1,459	1,291	1,228
Oats ...	3,500	3,028	2,540

Cotton, however, experienced a fairly good harvest this year, but the 1934-35 production threatens, or rather promises, to be appreciably smaller. The total of 1933-34 crop is estimated at 25,563,000 bales against 23,780,000 bales in 1932-33, in spite of the fact that the United States experienced a fall. In America the report of the Department of Agriculture shows that both acreage and yield may be expected to be lower this year. The former has dropped to 165.9 lbs. per acre from 208.5 lbs. in 1933-34 to 169.9 lbs., which was the average for 1928-32. The acreage sown has fallen steeply from the annual average of 40,514,000 acres in the five years 1928-3 to 27,241,000 acres in 1934-35. In India and Egypt the acreage sown is smaller than last year. The total stocks of cotton fell from 12,547,000 bales to 9,969,000 bales in the year ended July 31, last. The carry over is equal to about two-thirds of the average annual consumption of all kinds of cotton. To that extent, there is still the dead-weight of stocks to pull down prices from their present height. The position is better only in comparison with wheat, which is still suffering from the bumper harvest of 1928, the reduced consumption in subsequent years and the fairly large harvests of 1930-32. If the estimates of the crops of the Southern Hemisphere prove to be correct, then it is possible that the accumulated stocks of wheat may be reduced to near the normal levels by next summer. As for other agricultural commodities like Rubber, Wool, Bacon, Tea and Hides and Skins, the prices of these have risen during 1934 without the irregularities of 1933, when the rise in prices was due to changes in currency.

* * *

From the standpoint of the economic equilibrim what is significant is not so much the rise in prices, as that the rise in the case of agricultural commodities has been more than the rise in the case of industrial products. The International Review of Agriculture shows that in England and Wales, whilst the general wholesale price index rose by 2.7 per cent. between August 1933 and August 1934, the index of the prices of agricultural products rose by 13.9 percent. A still larger rise—one of 21.2 per cent.—in the agricultural price index was seen between the same dates in the United States, where wholesale prices in general advanced by 7.2 per cent. In Canada, general prices rose by 4.2 per cent. and agricultural products by 8.1 per cent, whilst in Germany the figures were 6.3 per cent. increase and 13.6 per cent. increase, respectively.

* * *

While it is obvious that the improvement in the position and prospects of the chief agricultural products is one of more heartening features of the present position in world economy, it is not an easy task to appraise its exact significance to the restoration of economic equilibrium. It will be remembered that one of the chief causes of the depression was the maladjustment between the price of agriculture and the price of industrial products. The disproportionate fall in the price of agricultural products meant that the farming classes all over the world are a shrunken market for the products of industry. In this respect, it is important to remember that, while each country has its division between agricultural and industrial classes, the chief trading nations of the world also lend themselves to a similar

grouping. So that, not only are certain classes in each country unable to present an effective demand for goods and services of the same volume as before, but even amongst the nations some countries have far less of purchasing power than others. Owing to their advantages of organisation and, it might be added, political power, the industrial nations are always able to gain at the expense of the agricultural countries, in the same way as in countries like America industry has been able to secure its advantages at the expense of agriculture. It is by no means an accident that the depression started in the agricultural countries and was more severe in them up to a late stage of the depression than in the industrial nations. That the depressed conditions should spread to industry and the industrial nations is no matter for surprise ; for, when industry is deprived of its markets among the agricultural classes and among countries which are predominantly agricultural, the fall in demand brings about a reduction of prices, profits and employment. The whole vicious circle of unemployment and reduced purchasing power is set up and the way out of the depression becomes, indeed, hard to find.

* * *

Whatever the extent of the improvement in agricultural prices, and the manner in which it has come about, it is significant world economy to-day is not unfortunately the same as it was in the pre-depression years, as international trade relations have changed a great deal under the stress of the depression. In the first place, the proportion of agricultural products to the total goods and services offered in modern economic life is very much lower to-day. In the more advanced nations, the improvement of agricultural technique has meant that a much smaller portion of the population is needed to raise the requisite crop. This means that the direct benificiaries of a rise in agricultural prices are fewer and, to that extent, the contribution which improvement in the prices of wheat and cotton can make to the recovery must be less. Nevertheless, the importance of the recovery of agricultural prices cannot be under-rated. Agriculture is still by far the biggest industry in most countries of the world. Its importance is high both in countries like the United States and in countries like India and Australia. In the United States, agriculture occupies the key position. So long as agriculture is unremunerative, industries cannot be expected to maintain output or to make profits. Though the proportion of agricultural classes to the total population may have decreased over a period owing to the improvement in technique, the rise of agricultural prices to remunerative levels is a condition necessarily precedent to the smooth working of the economic organisation. While within the industrialised countries the comparative importance of agriculture may have declined, the broad division of the world into industrial and agricultural nations still suggests that, without the improvement in agricultural prices, there can be no equilibrium in the foreign trade of most countries. It should be possible with such a rise for agricultural countries to increase their imports of industrial products and for industrial nations to increase their exports and, on the strength of such an increase, to relax the control they have instituted in the import of foodstuffs and agricultural raw material from abroad.

* * *

Much optimism is not, however, possible in this regard. For even before the years of depression the world had shown a tendency to move away from the international division of labour which the Nineteenth Century Free Trade seemed to impose on it. Most of the backward nations, which were predominantly agricultural, were also fitted for the pursuit of industry. And in those cases in which countries like India consumed the very finished products for which they exported the raw material, the development of such industries at home was so obvious as to be inevitable. The tendency of such nations to develop industries at home is of much longer standing than the depression. But the same cannot be said of the attempts of the industrial countries to develop their own agricultural resources. While the agricultural countries were trying to develop industry, industrial nations were content to preach the benefits of free trade and geographical divisions of labour. If there had been a fair exchange or, in other words, if the division of labour contemplated by Nineteenth Century Free Trade, had succeeded in establishing an equality of standards of living amongst the various nations, the agricultural countries would not have taken to the development of new industries at home. But the disparity of standards impelled the agricultural nations to enrich the national economy by the pursuit of industrial activity. That industrial nations, too, should try to reduce their dependence on foreign countries for their requirements of foodstuffs is only natural. That they were slow to pursue this course is due to the failure to understand the position and to the hold which industrial nations as a rule had over the agricultural. When as a natural result of the depression exports began to dwindle, and it was becoming increasingly clear that the backward nations would not easily abandon their protectionist policy, the industrial countries resolved to develop their agricultural resources. They have, indeed, gone a long way on that path during the years of the depression; and one of the worst complications of modern world economy rises from the attempts of the industrial countries to develop their agricultural resources and to retain as a permanent feature of their national economy the maintenance of the price of internal agricultural produce at artificially inflated price levels. It is this circumstance, more than the fall in the proportion of the agricultural population to the total, or the fall in the proportion of the agricultural to the total products, that detracts from the importance of the improvement in agricultural prices to the question of world recovery.

* * *

While it would be unwise to exaggerate this one factor, it should not be overlooked that, as the *Westminister Bank Review* observes, economic recovery even like economic depression has the characteristics of the snowball. Recovery cannot begin until the production of the primary commodities becomes more profitable. It is true that the recovery which began in the Autumn of 1932, and which was continued without a complete break at any time, first appeared in industry rather than agriculture. But it may be ventured with confidence that this expansion in industry cannot continue, unless agriculture shows a similar improvement and becomes remunerative again. The fundamental difference between the position of agriculture and that of industry is that, while for the latter the reduction of cost becomes possible with an increased output, agriculture can become remunerative only by an increase in prices. Such increase in prices cannot come about unless there is a greater balance between supply and demand. Thus the advantage in the recovery of agricultural prices is that it will sustain the revival of industry that is already well on the way and that it would restore to economic activity a remunerativeness which it has sadly lacked all these years of the depression.

BANKING IN CEYLON

Judging from the report of the Ceylon Banking Commission, Sir Sorabji Pochkhanawala and his colleagues had been called upon to tackle an arduous task. The terms of reference to the Commission called for a report upon the existing conditions of banking and credit in Ceylon and the developments considered desirable in banking and credit facilities for agriculture, industry and trade. It was also added that the desirability of establishing a State Aided Bank was to be examined. One would have thought that banking in Ceylon is in a stage not far behind Indian Banking, and that to the extent that Ceylon is a much smaller country the task of surveying present conditions and suggesting ways of improving them would be lighter. A perusal of the report, even in the form of a summary, suggests that conditions in Ceylon are infinitely more backward than those in India when the Mitra Committee began its task and that the lack of statistical data is even more deplorable in the South. Banking and economic developments generally go together; and it may therefore be presumed that in a country where banking is far from advanced, general economic conditions also leave much scope for improvement. In fact, an enquiry into the banking system of a country has always to be related to a study of the general economic conditions; for banking is but a handmaid to industry and trade; and it has to be suited to the peculiar requirements of economic conditions.

* * *

The Pochkhanawala Commission has, therefore, had to survey the entire economic position of Ceylon as a preliminary to an examination of the conditions of banking and the formulation of the measures of reform suggested by present conditions. In addition to these the Commission has also had to examine questions relating to Ceylonese currency. It is well that a Banking Commission has had to give its enquiry the widest scope; for problems of banking are not easily marked off from problems of currency and credit or from the conditions of national economy; and conclusions in regard to banking which are made in the light of such wide enquiry can better stand the test of criticism.

* * *

In the present case, however, the Commission has not felt called upon to recommend any significant changes in the currency system. The main question before it, was whether it would not be advisable for Ceylon to have a different unit of currency from what obtains in India. The principal objection to the existing conditions seems to be that the Indian Government retain the profits of silver coinage and that with a different system such profits might be appropriated by the Ceylonese Government. This objection loses much of its force, when it is remembered that silver coins are not much in use in Ceylon, and that they are required only for purposes of paying Indian emigrants when they leave for home. The Commission also points out that in view of the conditions of 1918, when the Government of India was actually losing on the coinage of silver, the possible profits on silver coinage would not sufficiently outweigh the disabilities following a change. The greatest advantage accruing from the adoption of the Indian currency is that Indo-Ceylonese trade relations are given the greatest stability and that foreign capital, the need for which Ceylon will not outgrow for a long time, will have the greatest security so long as the Ceylonese and the Indian currency units are identical. It is also urged that with the establishment of the Reserve Bank in India there will be more assurance of scientific management and a more expert adjustment to the requirements of a changing world situation.

* * *

As for the general economic conditions, it would appear that Ceylon has even greater need for the developments of various forms of banking than India. But the Commission is inclined to the view that a series of distinct experiments in each sphere of banking would not be the best course to adopt and that the conditions in which banking would be a more healthy and automatic growth ought to be assured by appropriate changes in the existing situation, and that a State Aided Bank should be instituted which will watch the development of banking.

* * *

In this view it naturally gives attention to the development of the habit of saving in the indigenous population. It is, indeed, strange, as we learn from the report of the Commission, that the Ceylonese Government have not contributed to this problem at all and that their habit of placing their loans in foreign countries has deprived the Ceylonese of what in his eyes must naturally be the most secure form of investment, *viz.* Government securities. The Commission draws attention to this fact and states that Government themselves ought to do their bit. Among the measures suggested are the offer of Post Office Cash Certificates and more extended Savings Bank facilities. Apart from the backwardness in respect of saving, there are also other hindrances to the development of banking which the Government can remove by making the law more up to date. The Pochkhanawala Commission finds that the Civil Procedure Code and the Joint Stock Companies Ordinances are out of date; that Commercial Law does not meet the requirements and that the enormous

CHARTERED BANK BUILDINGS, CALCUTTA.

dilatoriness of legal procedure operates as a serious handicap on the development of credit operations. The provisions in regard to equitable mortgage, hypothecation of movable property, the assignment of policies, advance on shares and the rights of a pawnee to sell the mortgaged goods under certain conditions, are not helpful to the free expansion of credit. The condition of rapid development of banking is the ease with which security can be offered by borrowers to lenders; and the Commission rightly insists that the appropriate changes and conditions in the existing law should be made. In a country, in which there is still a stamp duty on cheques, it is natural that the abolition of such stamp duty should be one of the recommendations of the banking Committee.

* * *

As for the strictly banking problems, the Committee recommends the modernisation of the banking law, the co-ordination of credit institutions and the formulation of definite rules to which banking institutions all over the island are to be called upon to conform. No bank is to be allowed to operate save with a license from the Government which is subject to conditions devised in order to ensure sound organisation. There are to be statutory rules for the allocation of reserves, liability to audit, and periodical issue of proper balance sheet. And at the head of the new banking system there is to be a State Aided Bank which will be far from a mere State institution. Political influence is sought to be excluded from the Bank by the condition that the Directors ought not to be members of the Council. The Government have no direct representatives on the Board, while certain precautions are taken to ensure that the interests of the State are protected. A perusal of the Report makes it clear that the recommendations are inspired by the rich practical experience of Sir Sorabji rather than the purely theoretical knowledge which often inspires reports of this kind.

HELPFUL HOSTILITY.

The Commons debate on the J. P. C. Report has no surprises for India, either of a pleasant or an unpleasant kind. Indeed, India had little reason to expect any surprise. For the policy conceived by the National Government at the time of its advent in 1931 has now been worked out in its details ; and the process of propitiating the Churchill Group has gone far enough. Only those who overlook the fundamental kinship of Conservatism would suppose that there were serious difficulties in disarming the criticism of the diehards. We have always taken the view that the Government would have felt seriously embarassed if it had not crossed Mr. Churchill's mind to carry on a fierce campaign against the Indian "Reforms." The Labour Government had, indeed, made a little imprudent advance towards the satisfaction of India's political self-respect ; and the attacks of the Churchill faction have afforded invaluable help for the retreat. The debate is an advanced stage in composing this helpful hostility.

* * *

It is, of course, too much to expect that Mr. Churchill would stand up from his seat in the House and declare that the J. P. C. Report is the last word in political reaction and from now there would be none but a few sentimental Labourites to oppose the Government proposals. It would be bad tactics, if nothing else. And it would destroy the chances of wringing further concessions at the eleventh hour during the passage of the Constitution Bill. But it is significant that there was one member of the Churchillian faction who changed over to the Government side on the ground that Mr. Churchill and his friends "had fallen into an irretrievable trap when asked what alternative they proposed." Lieut.-Commander P. G. Agnew perhaps felt surprised at Mr. Churchill's inability to propose an alernative. But it is nothing surprising that, given the policy of denying India self-government, there is no alternative to the proposals of the Government.

* * *

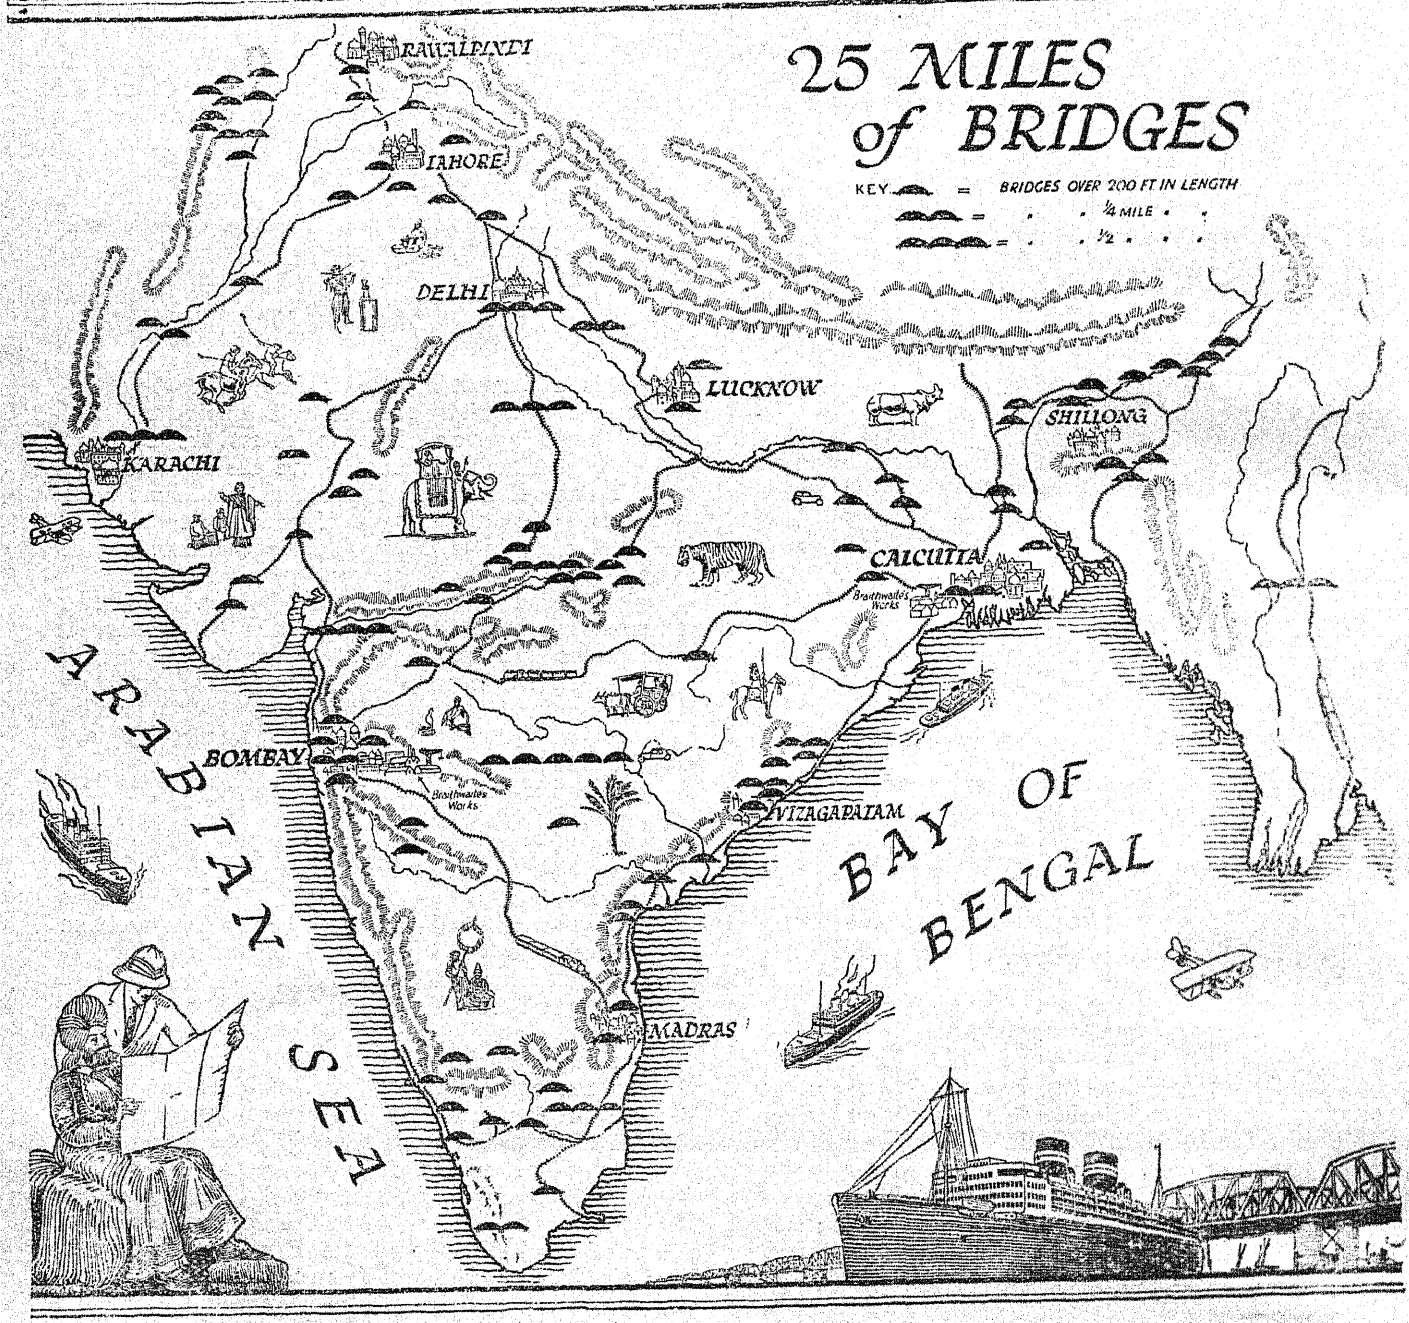
The fortunes of the only alternative to the present policy are in the hands of a weak and thin opposition on the side of Labour. Mr. Lansbury could hardly be expected, in the present state of his health and with his knowledge of the forces against him, to waste his efforts in futile opposition. He must be quite conscious that the days of Labour are yet in the future, that public opinion is veering round to his side and that it will not be long before he would have the opportunity to give his policies a fair trial.

* * *

It is understandable, therefore, that the debate never rose to a high level, though official and semi-official news agencies love to assert the contrary. The only speakers who rose above the common level are Sir Samuel Hoare and Sir Austen Chamberlain. The former has the benefit of constant thought on the fundamentals of the problem and mastery of its details. He spoke with an easy assurance of superior knowledge and a higher sense of duty. Whatever comments we may have to offer on the ultimate outcome of his labours, there can be no doubt that Sir Samuel Hoare is a model Minister of State, protecting policy from getting out of tune with current ideas and at the same time ensuring a realistic consideration of the problems on hand. We believe that if it were Sir Samuel's task to draw up a liberal scheme of reforms, he would have done it with the same scrupulous efficiency which he has shown in this instance. To Sir Austen goes the credit of bringing India into the picture. While Mr. Baldwin and Mr. Churchill reduced the great Indian problem to the level of a domestic quarrel among the Conservatives, Sir Austen brought in the question of India's claims, though only to deny them in the end. It has become the fashion among British politicians to concede the premises and the reasoning and then to deny the conclusion. The J. P. C. Report itself is a notable instance. While it lays down that the purpose of its proposals in regard to safeguards is to allay "sensitive opinion in *both* countries" it has little or no concern for sensitiveness in this country. The same smug indifference to the Indian standpoint characterises the debate in the House of Commons. There is little or no doubt felt in England that, despite the recent decision of the Congress, all parties will join together to "work" the constitution. We do wish that all parties will join to work the constitution ; for then its defects would be patent and the resuls inescapable.

INDIAN NATIONAL AIRWAYS LTD.

An interesting review of a year's spade work was presented by Mr. R. E. Grant Govan, G.B.E. at the first annual meeting on December 10 of Indian National Airways Ld. Following the decision of the Government of India to abandon their plans for an Indian State Air Service as a measure of retrenchment in 1931, Indian National Airways was formed early in 1933 to participate by agreement with the Government of India and Imperial Airways Ld., in operating the Empire service between Karachi and Singapore. The training of staff to deal efficiently with the traffic at the aerodromes in charge of Indian National Airays met with unqualified success, which encouraged the Company to expand its utility by the development of feeder services, the first of these having been inaugurated in Bengal in December 1933 between Calcutta and Rangoon (weekly) supplementary to the Empire service and a daily return service between Calcutta and Dacca. In spite of monsoon conditions, out of 699 services scheduled in



On the map are shown the 116 most important bridges out of the 196 which Braithwaites have built in INDIA between 1923 aud 1932.

MULUND WORKS,
BOMBAY

the first ten months, every service between Calcutta and Rangoon and all but three services between Calcutta and Dacca were completed, while from October 1 regularity was maintained at 100 per cent.

* * * *

The year's traffic revenue amounted to 52 per cent. of total operating costs, a percentage which, the Chairman said, compares favourably with the experience of air transport companies in any other part of the world, although the Chairman felt that commercial interests are not taking advantage of the facilities offered for carrying mails and passengers. The Rangoon service, with an upward trend, has been duplicated ; and the Chairman expressed the hope that it might be practicable to extend the feeder service to Assam. The Karachi-Lahore weekly mail service connecting with the Empire service at Karachi was inaugurated on December 4. This service will be duplicated next month to connect with the duplicated Empire service.

* * *

The Hon'ble Sir Homi Mehta in secondingg the adoption of the report drew attention to the national character of the service. In the future Indian National Airways Ld. will take its place not only as the foremost company in developing aerial transport, but also in times of national emergency in supplying Indian pilots and Indian engineers. From the point of view of making India air-minded, the Company is rendering invaluable service, which the Government of India have recognised by ear-marking Rs. 90 lakhs for civl aviation.

INDIAN TEA AND THE AMERICAN MARKET

The Commissioner for India, Indian Tea Cess Committee, writes to us under date Dec. 11, 1934 :

"My Executive Committee have read, with much interest, the article entitled "Propaganda and Profit," which appeared in the editorial columns of your paper dated the 10th November, and we take this opportunity of thanking you for the wholehearted support you have given to the demand for increasing the rate of cess.

* * *

"While we are in agreement with everything you say in regard to the need for increased resources in the hands of the Indian Tea Cess Committee with a view to intensifying tea propaganda in India, we would like to point out that your reference to the campaign in the United States of America shows some misunderstanding about the object the Committee has in view in pursuing that campaign. The real object is to maintain and strengthen, as far as possible, the hold on the American market which the Committee have secured for the Indian Tea Industry as a result of persistent propaganda. Both the Indian and American markets are invaluable to the Industry for the simple reason that they are both potential purchasers of Indian tea.

* * *

"In recent years, the general trend in America has been towards black teas of good quality ; and, therefore, any relaxation of efforts in America would result in the decrease in consumption of Indian tea in that country. During the period of 11 months ending 31st May 1934, the total consumption of black tea in America was 52,330,467 lbs., of which India's share amounts to 15,792,892 lbs. It would be almost suicidal for the Indian Tea Industry to surrender its position of admitted advantage in a foreign market of such potentialities as America. If India withdraws, other black-tea-producing countries would come in and take her place. America is a profitable market, and it is worth India's while, not only to make her position there secure, but also enlarge it as far as possible.

"The expenditure of £50,000 per annum in America is justified, since it is helping to maintain, against the strong coffee competition, a larger consumption of tea than in India itself. This amount is not more than what is practically being spent in India at the present time. India is thus using a portion of her resources for tea propaganda in consolidating the market already won for tea as a beverage against its rivals, chiefly coffee. Moreover, America is paying a higher price for every pound of Indian tea she consumes than what India is able to pay for the tea consumed by her.

* * *

"You have rightly hinted that it is futile to find out the relationship between the price of tea and the cost of propaganda, and we think it is equally futile to seek comparisons between the American and Indian compaigns on that basis. The expenditure on propaganda is just as much an investment in India as in America, since both offer fields that are yet to be explored. The Committee needs more money to develop the Indian field to a much fuller extent than it has hitherto been possible for them to do, and that is precisely why they are trying to get the rate of the cess increased. So far as the American field is concerned, much more can yet be accomplished with lasting benefit to the producers of Indian tea. Anybody who has a fair knowledge of America will testify to the quickness and alacrity with which the average American responds to publicity, and there is undoubtedly a big opportunity there for India, as the world's chief producer of black tea, to double or even treble the consumption of her tea in America."

* * *

The difference between our viewpoint and that of the Indian Tea Cess Committee is so little that it need not be laboured further. Our objection to the continuance of the American propaganda rests on the supposition that it left very little resources for the Committee to carry on the more fruitful campaign in India. We still hold to the view that if it is a question of choosing between the Indian and the American markets, the long view should favour the former. We also believe that at one stage the American propaganda was carried on to some extent at the expense of the Indian. If no such conflict exists, there is everything to be said for the Indian tea industry putting forth its best efforts to develop the vast potentialities in both countries.

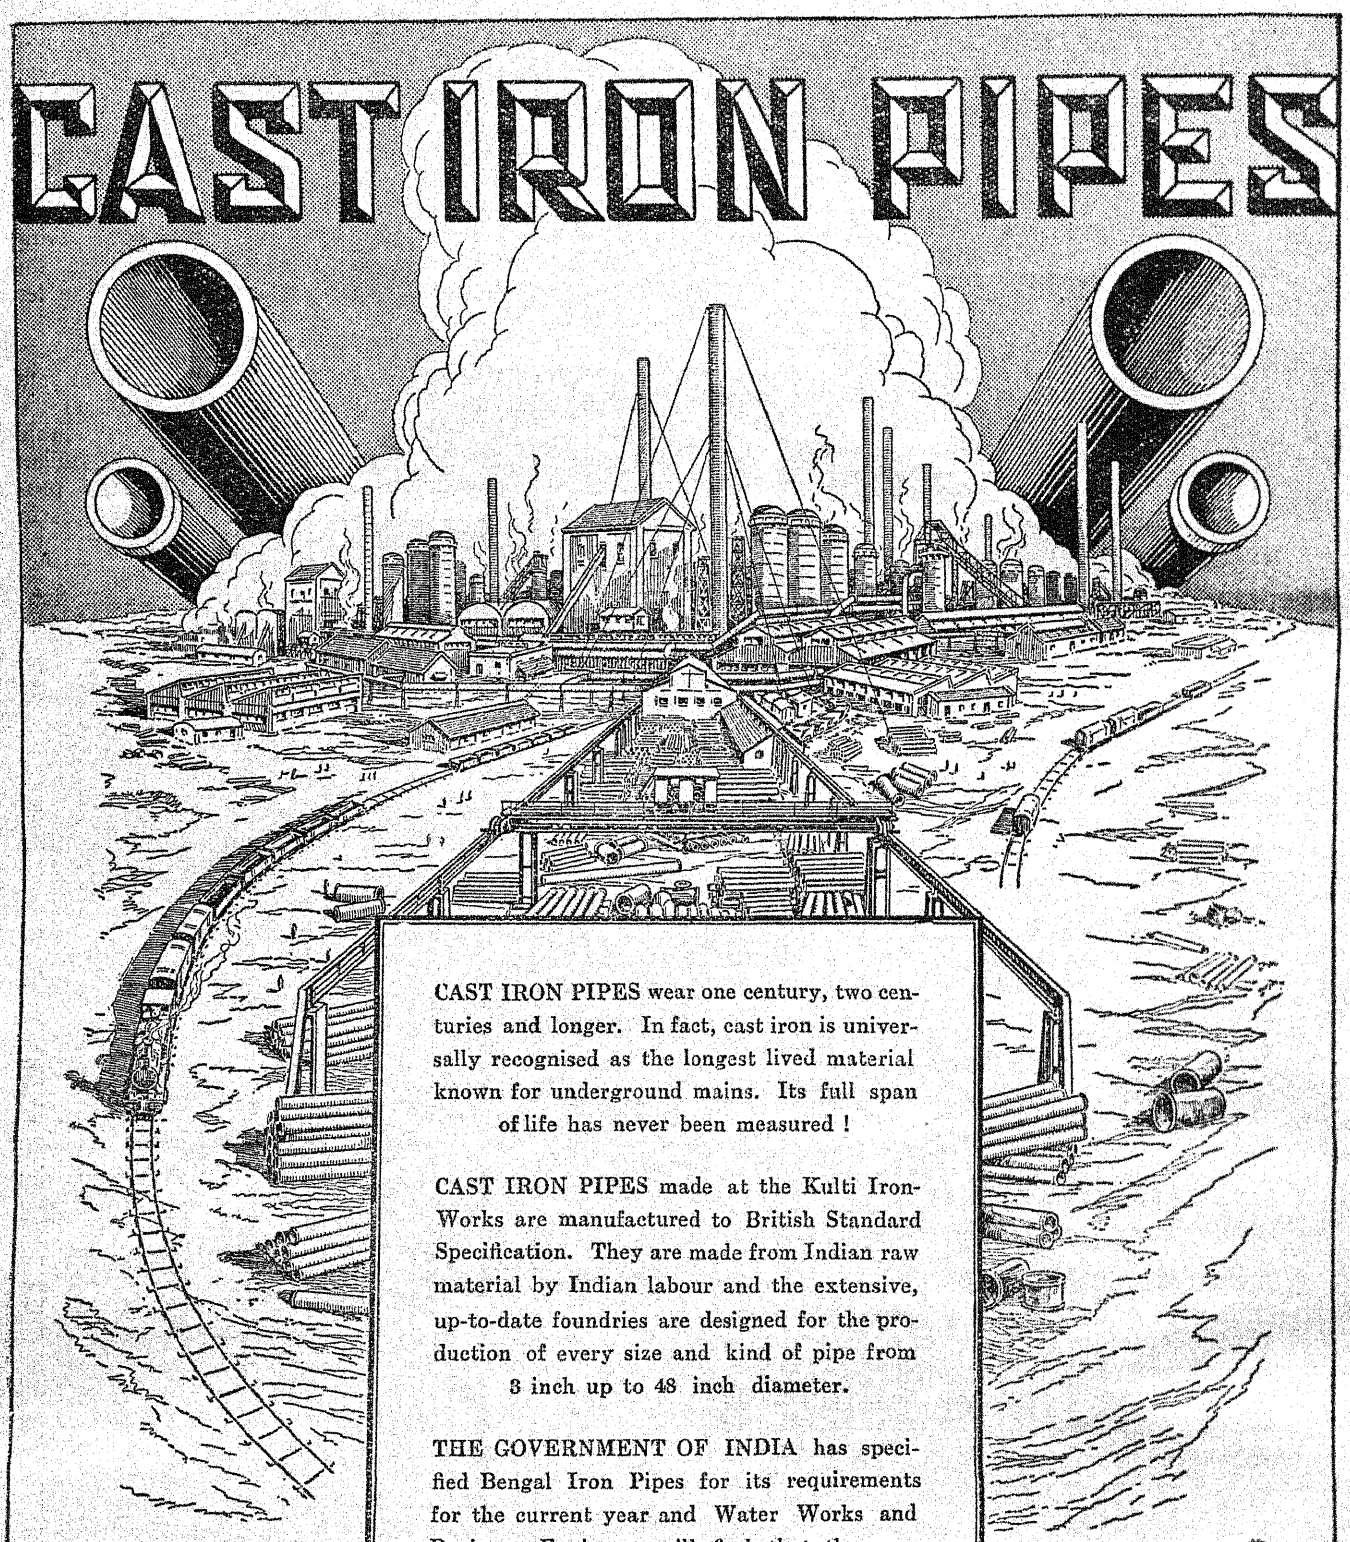
CAST IRON PIPES



CAST IRON PIPES wear one century, two centuries and longer. In fact, cast iron is universally recognised as the longest lived material known for underground mains. Its full span of life has never been measured !

CAST IRON PIPES made at the Kulti Iron-Works are manufactured to British Standard Specification. They are made from Indian raw material by Indian labour and the extensive, up-to-date foundries are designed for the production of every size and kind of pipe from 3 inch up to 48 inch diameter.

THE GOVERNMENT OF INDIA has specified Bengal Iron Pipes for its requirements for the current year and Water Works and Drainage Engineers will find that they can obtain all their needs from the same source.

GROSVENOR HOUSE,
London, Dec. 1.

The purpose of my last week's gossip was, perhaps, pursued in a desultory manner. I set out to satisfy the demand for something personal, compared to the high finance which I was formerly indulging in, something light compared to the dry-as dust affairs of the money and the giltedge markets. I am aware that, in spite of a sincere desire, I left my task largely undone. The parenthesis regarding the boom in London was longer than even the main theme. The fact is I have no zest for passing the trivialities of a foreign journey on to the reader. Nor am I in the mood, were I even otherwise fitted, for those flights of fancy which travellers often indulge in, to make good "copy" for the press.

The idea of a foreign tour had no long period of incubation in my mind. I never had that wistful longing which I know many of us have in India, to be out on the high seas, to watch other peoples in their homes and to come back with a lot of impressions and ideas for their people's consumption. I know many who on their return from a foreign tour have a face which is an open invitation to ask them to recount their experiences. They simply itch to refer to the tour abroad. See one of them at a party; and you haven't to wait long to hear him break out with "when I was in London. . . . ." This is, perhaps, the grosser type. There are others who develop certain interests, non-material perhaps, but nevertheless, sufficiently absorbing to restrict the scope of their observation and activity. Many set out for England with the pre-conceived purpose of shaking off the enchantment which distance lends to view. They have lived all their lives in such awe-some admiration of the European that they are eager to note his weakness: that is, when he is off guard in the freer atmosphere of his home. The other extreme, too, is by no means rare. School boy essays on the benefits of travel have their hold on many adult minds. And travel is not unoften done in a spirit of reverent study. In this category come some of our retired Indian officers who, after a long service, in which work and salary and income and saving have been in disgusting disproportion, vote themselves a foreign tour in a fit of reckless abandon. I am not sure if the rules provide for higher allowances for leave spent in a foreign country. Knowing some of these emigres as I do, I should not be surprised if the tour is the means of further additions to their swollen savings. But that is a digression. The point is that these people are still in the grip of the platitude about travel broadening one's education and enriching one's mind. I do not question the truth in this old belief. But how many can claim to have broadened their mind after a tour abroad? Some time ago *The Statesman* made fun of this notion and presented a number of tests to make sure that a man has emerged with greater culture out of a travel abroad than when he went into it. In ninety cases out of a hundred, travel makes for hauteur and an air of self-opinionated priggishness.

The truth is that one has to be truly educated to derive the educative value of travel. Obviously, the purpose of travel is to familiarise yourself with the unfamiliar, with a view to break the bias in favour of the known and the prejudice against the unknown. In other words, a genuine catholicity of ideas and, I would add, habits, is the cultural end which travel may be expected to subserve. But, again, how many of us can lay claim to such catholicity before or after a foreign tour? To chuck the *pagree* and don the hat while abroad is a triviality, which the truly catholic would, perhaps, disdain to observe. Real openness of mind, sympathy with things that are foreign, a receptiveness to new ideas, readiness to recognise superiority where you see it and ability to assimilate it in the fibre of your being, these are the gains of going out of your parochial surroundings.

I think it is Mark Twain who caricatured to such effect the American who in every foreign city he visits takes care to surround himself with its American residents. He reproduces, in short, his domestic environment and feels the wiser for doing so. The futility of such travel is obvious. Many of us in India do no differently. Pandit Malavaiya, it was said, took so many gallons of Ganges water to last him throughout his journey abroad. I do not mean to deride his intense religious devotion. But others, with less excuse, do the same. They take elaborate care to write to all the Indians, in the various places, get in touch with them with *n*th hand introductions and worry their lives out before they embark again for the next stage of their tour. They take, so to say, a bit of Indian territory in their portmanteau, a sort of magic carpet which they can take to the ends of the earth and spread out with equal ease in China and Peru and feel as cosily at home as in their domestic *guddy*.

You may wonder why I have dwelt at such length on the foibles of travellers in general. But

a moment's thought will suggest the answer. It is to insist that in respect of my foreign tour, I have neither been impelled by the ordinary motives, nor been enslaved by the ordinary habits. As I said, I never had a wisful longing for a foreign tour. Time was when I could afford a foreign tour as easily as I could afford a rup up from Calcutta to my native home in the South. Perhaps it was this easy reach that made me scorn the idea. But even in far less affluent days, a foreign tour had no glamour for me. I could see no purpose in undertaking it; and I was sure that the idea would never cross my mind unless it had a definite place in my scheme of life. From the letters that I receive from home, I learn there is a lot of speculation among friends and strangers alike about the real motive of my present exodus. And my reference to a purpose, must inevitably whet this curiosity. I can also guess that many people, fancying that they are only putting two and two together connect my run up to London with a run for some biggish job in the Reserve Bank. It is, indeed, strange how people can cling to ideas which are contradictory to well-known facts. Here I am writing for months, why years, on the persons suitable for this and that post in the Reserve Bank, showering compliments on one and all and sometimes advocating the claims of particular candidates in what others might consider unmeasured language. It is plain commonsense that, if I were on the run for the Deputy-Governorship, I should, at least, have refrained from boosting others for it.

Let me make it clear that my visit to foreign countries has no purpose other than the furtherance of Indian Finance in status and prestige. And this preoccupation has circumscribed the sphere of my interest and activity.

FUTURE OF THE PRICE OF GOLD.

Eavesdropper cables from London:—

December, 14.

The question of the future price of gold has been intriguing the attention of the London Market and its journalist advisers, namely, the City Editors. Mr. Paul Einzig, with his unerring instinct for the topical, has in his latest work examined all the factors which are likely to influence the price of gold and, therefore, the future of gold shares. At the end of an exhaustive examination, he epitomises it in three principal points. Firstly, he concludes from the present position and the prospects of the world's principal currencies, especially those of the gold bloc, that 1935 should prove a critical year for the gold currencies. He is of the opinion that these nations have well nigh arrived at what may be called the arithmetical limit of deflation, and that the human costs of deflation must deter the Governments from persisting further on this path. Once further deflation is ruled out, devaluation remains the only method by which the equilibrium of prices and foreign trade can be restored. Mr. Einzig thinks that in one respect the policy of the present gold standard countries in regard to devaluation might be different from their foreruunners in this line. He thinks that France, Italy, and other countries might suddenly decide on a lower parity instead of abandoning the gold standard for a time and experimenting with the exchanges in order to find out the natural level. In other words, the gold bloc might prefer devaluaation to a tentative abandonment of the gold standard. But so far as the question of the price of gold is concerned—and this Mr. Einzig's second point—there is bound to be an appreciation whether the gold bloc abandons gold or stabilises the currencies at lower parities. The third point that Mr. Einzig urges is that, once the currencies of the world are reduced in value in terms of gold, the way would be made clear for the re-linking of national currencies through a stable value in terms of gold. Mr. Einzig believes that such re-linking will be on a basis which would give gold a value of about 170 sh which contrasts with the present quotations of about 141 sh.

Mr. Einzig's view is opposed by Major Angus who predicts a catastrophic, though possibly temporary, fall. The *Financial News* totally disagrees from Major Angus; and for its part, it has no doubt that the underlying trend of the price of gold must be upward. It poses the question whether it is not possible that in the event of all countries suspending the gold standard, a flight from gold would not materialise. But the answere of the *Financial News* to the question posed by it is "The is a risk which we find it difficult to take seriously." Gold is bound to rise. But the rise will be "controlled."

Giltedge is going again headed for a rise after the temporary, but really useful, reaction of the past fortnight. The reaction might have created the belief in some quarters that the more rosy prospects which I held out for giltedge are being belied. But the unmistakable strength behind the recent recovery must bring the conversion of the 3½ per cent. rupee stock and 3½ per cent. sterling stock into a 3 per cent. loan nearer the realm of practical politics.

SOUTH INDIA

GOVERNMENT AND RURAL INDEBTEDNESS

(FROM OUR CORRESPONDENT).

Madras.

The Madras Government have at last been forced into the open in regard to the question of rural indebtedness. The Government till now have been content to express profound sympathy with the agriculturist in his state of indebtedness. And their supporters in Britain too, have seized on the existence of moneylenders in India as one of the most potent reasons for denying any measure of self-government to this country. They contend that the relaxation of British control over the administration in India will inevitably mean the handing over of the agricultural classes to the tender mercies of usurers in urban and rural areas. Beyond this, however, they have not been prepared to do anything. They have been offering their sympathy in profusion. But when it comes to action, they have been prepared for nothing more than sterile criticism of suggestion that come from the various quarters. In Madras, however, the introduction of a Debt Conciliation Bill by Mr. Ramalingam Chettiar has made it necessary for the Government to express some manner of official views upon this question and to indicate the lines on which they would be prepared to take action. Mr. Chettiar's Bill aims at the establishment of a Debt Conciliation Board to effect a settlement between the creditor and the debtor and to provide for the recovery of arrears of land revenue of the amount settled by the Board as due to the creditor in default of the payment of the amount.

It need hardly be said that Mr. Chettiar's proposals rest on the authoritative findings of the Central Banking Enquiry Committee that "the most effective remedy for the present state of rural indebtedness will be found in the pursuit of a vigorous policy of debt conciliation on a voluntary basis by the Local Governments." And Mr. Chattiar has also taken points from the legislation that is attempted in provinces like the C.P., and Punjab to solve this problem. One would normally think that this is about the only way of solving the difficult problem of agricultural indebtedness. According to the Madras Provincial Banking Enquiry Committee, the total indebtedness in this Presidency amounted in 1930 to 150 crores of rupees, the bulk of it being agricultural. The Committee thought, and the Central Committee concurred in the view, that there is no cut and dried solution to this problem, and yet it is of the greatest importance to the economic development of the country. When one of the most important agents of production within the country is under a perpetual load of indebtedness and lacks, therefore, the incentive to making the best of his faculties and facilities, it is hardly any wonder that this country stands to-day as it did decades ago and that little or no progress is made. If the biggest industry of the country, namely, agriculture, is to gain in efficiency, then, it is necessary that the agriculturist should gain the utmost zest in his role as producer. But how could he, when he knows that every margin he might get over his barest subsistence is bound to be appropriated by a lender none of the lendings of whom came to his own benefit? Besides, when most of the debts are generations old and the debtors themselves have personally little or no responsibility for incurring them, there is left a sense of injustice which will eat into the very vitals of society.

The problem of rural indebtedness, therefore, is not a question of equitable relation between lenders and borrowers. It has the utmost scope imaginable in social life. It is in the first place a question of equity. Secondly, it has a place in economic efficiency. Thirdly, it raises the question of immediate relief to a class on which all kinds and manner of trouble, have of late descended. It is, indeed, difficult to understand how any Government worth the name can preserve an unperturbed mind about so crying a social evil. No one, who is acquainted with the facts relating to agricultural indebtedness, could have any doubt that the only way of undoing this Gordian knot is to cut it. The Central Banking Enquiry Committee suggested this drastic process but in a manner that should command the acceptance even of a conservative Government like ours. Instead of recommending, as indeed they should have done, the wiping out of the agricultural indebtedness by a single stroke of the legislative pen, they have put forward the proposal that arrangements should be made for some kind of composition and progressive liquidation of the amount thus agreed on.

All this makes no difference to the Madras Government. They state that the Government "very carefully examined the Bill but they are unable to agree without more definite data than are at present available to them, that legislation aiming at debt conciliation is the proper or the only remedy". According to them, an important objection to such legislation is that "it would affect the sanctity of contract and might tend to discourage legitimate transactions and so dry up sources of credit, thus proving a hardship to the very classes whom the proposed legislation is intended to benefit." "It may also be urged," the order continues, "that creditors require protection no less than debtors and that giving relief in the matter of debts to the agricultural classes alone and not the other classes would not be just."

The paragraph quoted above shows a most lamentable misunderstanding of the nature and significance of the problem of rural indebtedness. Firstly, we may consider the question of justice to lenders. It is, indeed, strange how any question of fairness to lenders can arise in this context. If Debt Conciliation Boards are instituted and if it is found necessary to make awards which are substantially less than the claims of creditors, no one can contend that the creditors would be getting less than they would be otherwise able to realise in the ordinary course. Much of the huge volume of agricultural indebtedness in India is really bad debts. And the objection to agricultural indebtedness in its present form is that without enriching the lender it makes the debtor poor, indeed. There can thus be no injustice to the lender. On the other hand, the lender ought to be grateful that means will be found for realising as much as it is within the capacity of his debtor to pay. Even if some injustice to the lender were involved, it would be nowhere in the scales against the tremendous gain in the efficiency of the foremost national industry. As for sanctity of contract, the cry of pious horror set up by the Madras Government sounds strangely in the ears of people who have to write day in and day out about some form or other of repudiation of debts on the part of individuals, institutions, communities, and Governments in all parts and corners of the world. If Germany can continue to enjoy credit, if the nations of the world could vie with each other for the privilege of trading with Soviet Russia, if the defaulters of war debts can count amongst the most respectable nations of the world, well, the poor peasant, too, can risk the odium of a frank confession of inability to pay. And the public, too, may be sure that trade and commerce will not come to a standstill by reason of this candour.

The Government have not stopped merely with expressing their disagreement with Mr. Chettiar. They have appointed a Special Officer who will enquire and report on the following points and on any others which he may consider necessary in the course of his investigations.

(1) To what extent indebtedness prevails among agriculturists;

(2) How the present depression in value of land and the fall in prices have affected the position of the agriculturists;

(3) How far compulsory recovery of debts through courts has affected the position of agriculturists who have incurred debts;

AS MUCH AFRAID OF A FALL AS A FEATHER

A Godrej Safe with all its ponderous weight is as much afraid of a fall as a feather. Read below what the Quilon Bank says. This has been proved time and again. The other day a Godrej Safe was caught in a terrible fire and fell four floors to the ground on the hard stone pavement without any harm coming to it.

THIS PATENT 16-BEND
JOINTLESS
GODREJ SAFE

has no joints in it that could be broken by a fall or by burglars. The entire body of Safe is made out of a single continuous plate by bending at 16 different places. Also, double-bending of front flanges to form jointless door-frame makes both the body and the door-frame immensely strong against breaking by fall or wedging by burglars.

THE QUILON BANK, LIMITED.

Madras, 14th July, 1934.

Messrs. GODREJ & BOYCE MFG. CO., LTD., MADRAS.

DEAR SIRS,

Our Mysore Agent informs us that the big fireproof **Godrej Safe, weighing nearly 20 railway maunds,** which we recently purchased from you for that Branch, was being hauled up by means of pulleys and ropes at our Mysore premises when the chains broke accidentally and the Safe **fell down from the second floor, from a height of nearly 30 ft.** But, we are very happy to inform you that but for two small dents and a few scratches to the paint, there was **not the slightest trace of damage to your Safe.** This is evidently due to the jointless body construction and the immense strength, which you justly claim for your safes.

Wishing you every success.

Very truly yours,
Sd. THOMAS JACOB,
Agent.

OLYMPUS

(FROM OUR CORRESPONDENT)

New Delhi, December 11.

With the departure of His Excellency the Viceroy to-day by air, the Court has moved down to Calcutta; and one by one the Olympians, too, will be going to pay their annual homage to the former seat of Government. Calcutta's pride will thus be once again satisfied and the Clive Street magnate will feel happy that once, at any rate, he makes the powers that be look small.

* * *

But I have a warning to give to the Clive Street. "They have overdone this business" So Bombay and Madras allege, and I am told that agitation is about to be organized against this annual exodus to Calcutta and particularly against Calcutta being favoured, almost year after year, for annual meeting of the Associated Chambers of Commerce. Already the feeling is growing in India that what the Bengal Chamber of Commerce says to-day the Associated Chambers of Commerce says to-morrow. Bombay claims to be better representative of Anglo-Indian commercial opinion which, after all, is to be of far greater value in the India of to-morrow.

* * *

Any way this year there can be no change; and Calcutta will hear a first-rate speech from the Viceroy. His Excellency will deal extensively, if not exhaustively, with every problem that calls for notice to-day including the J.P.C. Report. That speech is aimed at giving ample notice to the new Assembly of what would be the policy of Government of India in the immediate future in political and economic spheres, and the reactions to that speech, will be judged before the Viceroy draws up his address to the Assembly.

* * *

It is doubtful whether His Excellency will inaugurate the session with a speech. It is more likely that he will defer it to a later date when he can speak to both Houses of the Central Legislature which will be sometime early in February. Moreover the Viceroy would like to address the Assembly after it has elected its President, so that Lord Willingdon could pay a personal compliment to the new President and express the confidence of Government that in his hands the traditions of the House will be safe.

* * *

There is one point on which the Viceroy has to make an early statement; and it is not certain whether he will do it to the Associated Chambers of Commerce or to the Legislative Assembly. The question of the creation of a separate Department for communications is on the anvil; and the Associated Chambers of Commerce are, no doubt, to express themselves strongly in favour of the proposal. Government is, more or less, committed to the proposition and cannot escape giving a definite and final answer. I take it that as at present constituted, Government will approve of the scheme.

* * *

The Road Congress which opened here yesterday is a reminder that the problem of communications is one of considerable complexity and urgency. Sir Frank Noyce delivered a comprehensive address emphasising the need for a central organization which will conduct research and enable all experience to be pooled. No doubt, the Congress will be given a permanent constitution; and provincial authorities do not apprehend that it will trench on their transferred sphere of activity. But the real question remains, "Where is the money to come?"

* * *

Some money is of course, there; and funds have been provided for road development. But it is too little compared to the needs; and one high official told me that he could not see how the programme could be pushed forward much beyond the present stage without greater resources at their disposal. In the end, therefore, the real usefulness of the movement, inaugurated this week, will be, to give technical advice and assistance to road makers rather than to strike a fountain of money for the roads.

* * *

Lord Willingdon has stated that Lady Willingdon will issue an appeal for Silver Jubilee Fund to commemorate the historic event in the King Emperor's reign. Already the various official authorities have been notified by the Silver Jubilee Fund office that their employees be asked to make voluntary contributions to the Fund. There will be response because every one would like to express his sense of loyalty to the person of the King-Emperor.

* * *

Talking of Silver Jubilee I would like to say what people have been discussing here regarding the official representatives who will be sent from India to participate in the ceremony. "Official Representative" does not mean servants of the crown. What it means is, people deputed by the Government of India to act on its behalf, just as delegates are appointed to the Imperial Conference or the League of Nations.

* * *

Which means that some leading non-officials may be included in the representation. Names mentioned in this connection are those of Sir Joseph Bhore, Sir Shanmukham Chetty and His Highness the Aga Khan. The last named is already in London and would be readily available for this honour. Sir Joseph will have by then retired from the Viceroy's Council and should be able to combine holiday with business. Sir Shanmukham Chetty, too, would be available for public service, now that he has lost the Assembly Chair and is free to undertake a foreign trip in Summer.

* * *

The details of the House of Commons Debate have begun to come in. There is only one comment I wish to convey. Referring to the Secretary of State's remark that the Viceroy and Governors have stated that the scheme is workable an official said "Sir Samual uses our views only when it suits him. He never tells any one what we say in contradiction. If we had our way, the constitutional proposals would have been more progressive."

"HILL-BIRD".

(Continued from page 1551)

(4) What facilities are now afforded by Land Mortgage Banks and Co-operative Societies to agriculturists;

(5) Whether conciliation in the matter of discharge of debts is now being resorted to and, if so, to what extent ;

(6) To what extent property has been mortgaged by agriculturists as security for debts and how much land has changed hands during the last four years; and how much thereof went to non-cultivating classes;

(7) Whether legislation on the lines of the Debt Conciliation Bill for the establishment of Conciliation Boards is really necessary for the relief of agriculturists and whether there is any demand for such legislation by them; and, if so, whether the scope of legislation should be limited only to debts on land or should include all debts of agriculturists ;

(8) Whether such legislation is likely to curtail the facilities that now exist for borrowing; and

(9) Whether in case legislation is considered unnecessary, there is any other possibility of affording relief to agriculturist debtors.

The criticisms which we have made against the observations of the Government Order apply with equal force to the points enumerated above. But the public may hold its soul in patience, till the Solonian wisdom of the Special Officer breaks out in measures which the great Greek law-giver could not think of.

JUTE RESTRICTION

IMPORTANCE OF EXACT PERCENTAGE

DENGERS OF ILLIBERAL CUT

By H. P. Bagaria.

Immediately before the Government of Bengal announced their decision regarding the 1935 Crop, the jute market was in a most depressed state. The price of pucca bales had come down to below Rs. 24 per bale, which was the lowest touched during the present economic depression. Imports of jute into Calcutta from the Moffussil were in excess of the previous season. Large stocks had accumulated in the hands of dealers, which they were eager to dispose off. Mills were finding it extremely difficult to make any forward sale of their manufactured goods. In short, it was a prefect "Bear" market.

Sometime after the announcement of the Government of Bengal's decision in September last, things began to take a turn for the better. The various pronouncements of Government officials began to inspire confidence amongst those connected with the jute trade. The feeling of despondency gave way to a feeling of optimism and confidence. People in the trade began to recognise that the Government of Bengal really meant business and that the Government scheme of restriction was going to be a success.

There has been a complete change of outlook in the jute trade. Not only has the apprehension of decline in the price of jute been belied, but there has been an improvement of Rs. 5 per bale or a rupee per maund. Hessian, which had dropped down to Rs. 8-4 per 100 yards, has improved to Rs. 9. There is a feeling of great buoyancy in the jute shares section of the Calcutta Stock Exchange. Practically all scrips have registered substantial advances.

Why his change in outlook? There has been no decrease in the supply of raw jute. There has been no sudden increase in demand. The jute industry has not struck any unsuspected gold mine. The one and the only reason for the altered state of affairs is the general belief in the efficacy and success of the Government of Bengal's scheme of restriction for the next jute crop.

I am frequently asked whether the changed outlook in the jute trade will be maintained or whether it will prove ephemereal as it did in the preceeding two years. I shall begin with a frank confession of the difficulty of answering this question.

When the Government of Bengal first announced their decision, practically the whole trade doubted the efficacy of voluntary restriction. Propaganda had failed in the past; and there was nothing to induce people to believe that it will not fail in 1935. But the subsequent pronouncements of responsible Government officials made it perfectly plain that propaganda in 1935 would be of quite a different nature from what was carried on in the previous seasons.

Public confidence in the sincerity of the Government's intention has thus been greatly increased during the last one month and more. But the crucial question is yet to be tackled. What is the amount of restriction that the Government of Bengal will advise the cultivators to carry out? Will it be sufficient to take prices on to higher levels? Or will prices be barely maintained? Or—Heaven forbid—will there be a set back and prices tumble down into the depths from which they are now slowly emerging?

For some time past there have been rumours in the market that the Indian Jute Mill interests will be advising the Government not to have any drastic reduction in supplies. In their opinion the Government of Bengal should not ask the cultivators to restrict their sowings by more than 15 per cent. of the previous crop.

I can say without any fear of reasoned contradiction that, if the Government of Bengal decides to have only a 15 per cent. reduction for the 1935 crop, the cultivators of jute will have to wait for at least a year for any improvement in the price realised by them. The very large stocks that are now being held by dealers will be thrown on the market, with the result that the whole of the improvement that has taken place in the price of jute will be lost.

The scheme of restriction that the Government of Bengal have adopted is a scheme of voluntary restriction. Nobody can say with any degree of certainty that the cultivators will be scrupulously carrying out the advice given to them by the Government of Bengal. In spite of the best efforts of the special officers appointed to carry out the scheme, there is bound to be a certain amount of evasion. Fifteen per cent. restriction means a crop shorter than the previous one by about 12 lacs of bales. If there is some evasion, as, indeed, there is bound to be, it is futile to expect any improvement in the price of jute in view of the large stocks that are held by merchants and consumers.

Besides if such a small reduction is aimed at, there is the danger of nature countering the efforts of the Government of Bengal. Ideal weather conditions might more than make up in yield the rtduction in area; and we have not advanced as yet to the stage of air-conditioning over a vast province. It might be urged that what is said of a 15 per cent. reduction might apply as well to a 25 or 35 per cent. reduction. But it should be obvious that in the case of a higher per centage there is a large margin of safety. The danger we are trying to gaurd ourselves from is not the paucity but a plentifulness of jute. If the outturn proves to be more than we budget for, the result would be disastrous depression in all sections of the jute trade, why, in the province as a whole.

Another Point.

Public opinion, it is well-known, is very strongly organised in Bengal bcause jute has the greatest importance for everybody in this province. But this commodity has not the same overwhelming importance for the sister provinces of Behar and Assam. In spite of all the instructions that the Government of those two provinces may be issuing to their cultivators, there is little hope of any reduction in the area sown under jute in Behar and Assam. The Government of Bengal would be well advised to keep this fact in view whilst deciding the exact percentage of reduction.

It is not necessary for me to set forth here the statistical position of jute. It is well known to everybody in the jute trade. In the beginning of the present season, the world had a carry-over which is estimated by experienced traders to be between 85 and 90 lacs of bales. The present season's crop has been estimated by the Director of Agriculture to be about 79 lacs of bales. But the imports up to the end of last month were about two lacs of bales more than the imports up to November 1933. The whole of the present crop may not find its way to Calcutta. A considerable part of it will be held back in expectation of a better market. But the 1934 crop is certainly not less than 90 lacs of bales. This means that the carry over at the end of the present season will not at all be reduced. On the contrary it may be slightly increased.

Under such circumstances and after carefully appreciating the facts set forth above, I deem it necessary to warn the Government of Bengal against advising the cultivators to restrict their sowings by anything less than 25 per cent. I have no doubt that the Government of Bengal are sincerely desirous of raising the prince of jute to a level which leaves a decent margin of profit to the cultivators. They would fail to achieve their object, if they advise the cultivators to restrict sowings by only 15 per cent.

OVERSEAS' NEWS: By Air Mail

GREAT BRITAIN

P. & O. ACCOUNT

The Peninsular and Oriental Steam Navigation Co. have published their accounts for the year ending September 30. While the position generally is sound, they have again failed to meet the 5 per cent. charges for depreciation without a draft of £550,000 on the reserves or to pay a dividend on the Deferred stock. After providing for depreciation of the fleet there is a balance of £151,269 which, £154,617 brought forward from last year, leaves a nett earning of £305,886 for disposal. The dividend on the preferred stock absorbs £152,000 leaving a balance of £143,886 to be carried forward.

The policy of the Company in writing off depreciation on a liberal scale should meet with the appreciation of the shareholders. Already £55,667,073 has been written off the fleet which cost £83,629,961. Besides the £1,387,918 allowed for normal depreciation two of their ships have been written off from the profit on the sale of investment in William Cory & Son Ld. In fact, the sale of the William Cory holding provides the most important feature of the year's accounts and explains the immense improvement in the liquid assets of the Company. The excess of liquid assets over current liabilities shows a startling increase from £4,884,000 to £12,012,000. The earning capacity of the group, however, has not been increasing. The receipts from voyages at £1,202,079 are £19,170 higher than last year, but the other interests, such as coal, wharfind, engineering, produced much lower returns than in 1932-33, and the total net income, excluding extraneous receipts such as profits on the sale of investments, shows a decline of £47,019. A comparative table of the principal profit and loss account items is given below.

Year to Sept. 30,	1934	1933	1932
	£	£	£
Receipts from voyages ...	1,202,079	1,182,909	881,770

The Tilling Claim

The Arbitration Tribunal set up to consider the claim made by the Thomas Tilling Ld., in respect of the transfer to the London Passenger Transfer Board of the Metropolitan section of its omnibus undertaking, have made an interim award of £1,750,000. The award relates only to the main claim of the company, the Tribunal reserving its decision on the Company's claim in respect of severence, apportionment and costs. The stock awarded is divided into £143,871, 4½ per cent, A stock, £143,870 B stock and £1,462,259 C. Stock.

The main claim was for £3,162,912, a sufficient amount of Transport Board stock to produce a perpetual income equal to the average profits accruing to the claimants in the three years 1928-30. The severance claim was for £116,531, and the apportionments claim was for £20,113.

The Board's offer was five years' purchase of the average profits, plus agreed value of property, stores and omnibuses, a total of £1,032,231.

The hearing of the case took 31 days.

The Subsidy for Tramp Shipping

The subsidy of £2,000,000 promised by Mr. Runciman to tramp shipping last summer was not availed of immediately owing to certain differences of opinion that arose between the Government and the owners as to the manner of applying the subsidy. It is now understood, however, that a scheme for the effective use of the £2,000,000 subsidy has been approved and the subsidy will probably come as a Christmas present to the depressed tramp shipping. It is reported that the scheme involves a grant of 8s. to 10s. per gross ton and that the subsidy will apply to 90 per cent. of the tonnage owned by each firm.

To come to the rescue of an industry that is depressed almost to the verge of extinction is, no doubt, a part of Governmental duty. But there is a feeling within other industries that the Government have not been able to distribute its patronage impartially. Liners are not faring much better than tramps, and the outlook is as black as ever in the coal industry and various other industries could easily do with a couple of million per year from the coffers of the Government. Have Government the resources to satisfy the chorus of demand for subsidies that will naturally follow this act of benevolence towards tramps? Or is it merely a plea to consolidate the chances of "national" candidates in such remote constituencies as South Wales at the next election?

Depressed Areas Bill

The proposals of the four Commissioners appointed to look into the depressed areas in Durham and Northumberland, Cumberland, South Wales and Sctotland have already been embodied into a Depressed Areas (Development and Improvement) Bill and is now before the House. A Depressed Areas Fund will be established to be started with £2 million granted by Parliament. Two Commissioners will be appointed, one for England and Wales and the other for Scotland "with wide powers to initiate, organise, prosecute and assist measures designed for the economic development and social improvement of the depressed areas."

The Commissioners will act under the general control of the Minister of Labour and the Secretary of State for Scotland, and in close association with the Unemployment Assistance Board in matters relating to persons to whom the Unemployment Assistance Act applies.

Artificial Silk Industry

The only industry that stands out pre-eminently out of the still largely depressed industries field is the comparatively new artificial silk industry. There was a time, earlier in the year, when fears of a trade war between France and Great Britain had clouded the propsects of the rayon industry. But to-day the clouds have lifted and the industry is in as flourishing a state as it has ever been before.

In January this year Courtaulds announced a drastic reduction in rayon prices. There were loud protests at the time from various producers and distributors. But it eventually proved a very wise step. It was a blow for competitive interests and it established rayon fabrics in a strong position in the textile market. Production of yarn and waste has gone up by leaps and bounds following the Courtauld price cut and the further price reductions following the halving of the excise duty on rayon yarn and waste under the terms of the Anglo-French Trade Agreement. Production for October at 9,000,000 lbs. is a record for all time and brings the total output of rayon waste and yarn for the ten months of the current year up to 76,500,000 lbs, only 7,580,000 lbs. short of the 1933 record of 84,080,000 lbs. Given a maintenance of the normally good end-of-season production, the full year's output should exceed 90,000,000 lb. Unemployment in the yarn industry is down to 8.3 per cent. while the average of the ten months is 10.7 per cent, as compared with 13.9 per cent. in 1933. In the far older Cotton industry unemployment now is 23.4 per cent.

Air Mail Week.

The Last Lap.

As the last quarter of the financial year approaches all eyes are turned towards the returns that the Treasury issues week by week in connection with the financial position of the Exchequer. Speculation is rife as to whether the anticipations made at the end of the last financial year by the Chancellor of the Exchequer will be fulfilled. As I mentioned a few weeks ago the anticipated surplus is by no means a moral certainty. But it it well-known that the last quarter of the year yields the largest revenue. The large returns expected from Income Tax have yet to come in and they usually come in during the last quarter. The Exchequer return for the week ended November 24 should put some heart into the Treasury Benches. The total revenue for the week amounted to £8,437,637 compared with £8,207,139 for the corresponding week last year. The total ordinary expenditure absorbed £7,228,106 as against £7,137,151. Already a skeleton surplus of £1,209,531 has made its appearance. Whether the skeleton will put on flesh according to the dreams of the Chancellor remains to be seen. Nearly the whole of the revenue total so far comes from Customs and Excise receipts. These two items have contributed no less than £6,742,000. The expenditure is mostly accounted for by the requirements of the Supply Services. The Treasury Bills outstanding have been increased by more than £5,000,000, but advances by Public Departments have been reduced, resulting in a slight reduction of the Floating Debt.

U. S. A.

CO-OPERATION BETWEEN GOVERNMENT AND BUSINESS

The boom in Wall Street has lent unexpected animation to American economy. In the whole of the Fall, there has been a mood of hesitancy bordering on pessimism. The downward trend of production seemed to many to presage a complete collapse of the New Deal and renewed chaos. It was believed that a healthy recovery, as distinct from the feverish activity under artificial stimuli, would prove to be more difficult than many were disposed to feel in the first flush of enthusiasm for the Roosevelt experiment. And among all the pessimists, Wall Street was, perhaps, the worst; for the premier stock market of the States combined its pessimism with a sullenness born of a sense of grievance. The attempts of Mr. Roosevelt to regulate dealings in the stock exchanges have been of the nature of cramping regulations and irritating interference with the working of a body which has a fair claim to autonomy. It is true there were abuses, and serious abuses at that, in the working of the stock exchanges in America. But nobody can insist that the only way of eliminating such abuses was to impose upon the stock markets the system of rigorous control that was devised by the President. It will be remembered that the New York Stock Exchange went to the length of transferring its scene of activity from New York to a place near by, in order that it might escape the rigours of the threatened control. Whether or not the action of the New York Exchange was defensible, the proposal to transfer the exchange to a rival seat is an unmistakable index of the depth of feeling amongst the members of the stock exchange.

That Wall Street, of all sections of American business, should show the first signs of increased business activity is, indeed, a very significant change. It may be useful to note the extent of the change that has come over Wall Street. The Dow Jones index of industrial prices has risen during the week from 99.47 to 102.38, the Rail index from 34.94 to 37.19 and the Utilities from 17.85 to 18.86. There is no doubt that there are many amongst the listed securities of the exchange which have a higher intrinsic value than is represented by the market quotations of sometime ago. In other words, there is, indeed, much to go for. But that this particular moment should have been chosen by the investors and operators for realising the potentialities of these shares points to a change in the prevalent business psychology.

The principal features of America's national economy which warrant the changes that have occurred during the week in Wall Street have been the subject of enquiry in these columns last week. The period under review has lent confirmation and further emphasis to our reading of the situation. The retail sales throughout the country have shown during November an increase of about 10 per cent. over the corresponding period of last year. Apparently business circles attach a great deal of importance to the improvement in retail sales. Industrial Corporations have all along thought that the idea of stimulating purchasing power within the country by means of an increase in wages was a peculiar fad of the President and that the resultant increase in cost would not be balanced by the improvement in trade. In fact, business was frankly sceptical even about the possibility of increased sales. Now that the figures of retail business throughout the country have shown an appreciable increase over the levels of last year, business is inclined to reconsider its attitude and at least hold in abeyance its former prejuduces against the New Deal.

The rise in retail sales is not, however, the only heartening feature of the present position. There are other signs of improvement in the basic conditions of American business. Not only has the dollar value of retail trade in the first half of November been 10 per cent. higher than the corresponding period last year, but, according to the Department of Labour, factory employment increased by 280,000 in October. Bank clearings in the week dated November 1 totalled 4,584 million dollars against 3,860 million dollars during the week and 4,728 million dollars in the corresponding week last year. Power output in the past week was 6.1 per cent. higher than the corresponding week a year ago and is the largest total since January 24, 1931. All these indicate that, what time production figures seemed to show a falling off owing to the inability of business to persist in its optimistic view, the basic conditions are showing an improvement. As for particular industries, steel mill activity has shown a small rise during the week at 29 per cent. It is true that, except for the tin plate industry, other buyers show little signs of putting through their orders. But it should be remembered that the motor car industry has not yet completed its programmes for the new season ; and as soon as it does, the offtake of steel on this account would enable production to rise to the necessary levels.

The really most hopeful feature of the situation is the idea which is widespread that the era of co-operation between business and the Administration has at last dawned. From the time Mr. Roosevelt began his economic experiments there have been at all stages varying degrees and kinds of antipathy between industry and the Government. There never was that degree of hearty co-operation which makes for a common and sustained effort to pull the nation out of the depression. It would be really a futile task to apportion blame between the two factors concerned for the absence of co-operation. The Administration would, doubtless, contend that industrialists had shown a singular incapacity to appreciate the need for bold experiments of the kind the Administration had in view and that business lacked imagination to see the difference between present conditions and the conditions in which the traditional business principles were an unquestionable success. Business, on the other hand, would accuse the Administration of having given in precipitately to the demand for

Air Mail Week

sensational and heroic measures of reform and that it should have been wise and worth while for the Administration to take businessmen along with them in the various measures of reform. The verdict of the impartial student would, perhaps, lie on the side of the Administration. Businessmen are too prone to run in the grooves of traditional ideas to sympathise with the revolutionary measures which form the New Deal. But one thing might be said in favour of business; businessmen can hardly be blamed for not working to their full capacity so long as the danger of further inflation threatens them in the face. It would have been well, indeed, if Mr. Roosevelt could have taken the advice of economists like Mr. Keynes, who declared months ago that the changes that were necessary in the structure of industry and the relations between the various factors of production has been accomplished, and that the time had come when further steady progress could be attained only by the Administration making it clear that they would not indulge in any more measures of financial sensationalism. The American Government have, doubtless, their defence in this regard. No one can underrate the dangers in the present conditions of a Government committing themselves once and for all, to the policy of maintaining the value of the national currency at a prescribed level, and depriving themselves of the freedom of changing it according to needs. Nevertheless, when the larger sections of business within the country have come to feel a certain amount of insecurity, it would have been advantageous to the nation as a whole, if the Government had afforded some reassurance of financial stability. Such reassurance was not forthcoming till the first attempts at re-financing of the Treasury showed it to be necessary in the interests of the Government themselves. Now it is widely recognised that the Administration's desire to keep their hands free in the sphere of monetary policy is no more than a measure of wise caution and that, so far as the practical programmes of business are concerned, it might be taken for granted that the Government would not willingly upset the existing level of values.

With the fear of inflation thus dispelled in so far as present conditions would admit, the path towards co-operation between business and the Government has been smoothened. There is, however the fear that the new Congress might entirely change the phase of the situation. It is composed of people of all sorts and shades of opinion in economic and financial questions; and it is just possible that the pressure that it could exert on the President would prove to be irresistible. The danger of a vaguely Leftist Congress has had the very desirable effect of drawing business and the Administration together in defence of present policies. Business and Government would alike seem to feel that the best way of disarming Congress, when it needs, is to achieve a substantial measure of recovery and thus steal the thunder, so to say, from the more boisterous elements. In this desire to disarm the future critics in Congress, there is a factor of the greatest bullish significance to American trade and industry.

GERMANY

BANKING REFORM

The Commission of Enquiry into Germany's banking system which was charged with the investigation into the defects of the Credit Structure has now concluded its labours. Dr. Schacht, the President of the Commission, has made his recommendations on the mode of suggested reform and the Report has also been handed over to the Chancellor so that it may form the basis for the new German Banking Law, which the Cabinet is expected to pass early next month.

That the German banking system has failed to function satisfactorily was first brought to light during the crisis of 1931, and the wave of bankruptcy that swept over the banking institutions during the crisis in Banking in Germany has come to be a major event leading up to a political upheaval. The growth of the Hitlerite Government is, among other influences, accounted for as partly due to the inefficiency of the banking system. In the pre-war period, the German Banking system was perhaps the best of the systems prevailing in all the countries of Europe and the tremendous progress made by the country was not incorrectly attributed to the efficiency of the banking organisation. Prof. Henry Hauser's "Germany's Commercial Grip on the World" was acclaimed all the world over as the best testimony to the pre-war banking system of Germany, and it was often pointed out by foreigners that their respective Governments should also introduce legislative measures modelled on the German plan to reorganise banking.

To put it briefly, the chief characteristic of the German Banking of the last decade was its elasticity. It seemed to have an almost unlimited capacity for adapting itself to the incessantly changing needs of economic life. As institutions for the supply of credit, the German Banks habitually made themselves more or less partners in the business which they financed. This may be opposed to the orthodox principles of banking where the banker considers himself as a "credit merchant pure and simple" who will not lend money without readily convertible securities. The German Banks, however, preferred to throw in their lot with the fortunes of the individual concerns they financed and not infrequently the security that the banks accepted consisted of the shares of the Companies. The Bank would find itself in the Directorate of many of the Joint Stock Companies, with a voice in the management of the affairs of those concerns.

This system had both its advantages and defects. In times of financial stringency, the banker, with his vast influence and business connection with similar other concerns, can see that the policy of the business concerned is suitably changed to keep it going. Not unusually, a process of fusion and combination is started, thus increasing efficiency and eliminating uneconomic competition. While welcoming the advantages, it cannot be forgotten that it has tended to bring about a centralisation of the banking structure in a few hands and a competition in fusion between rival banking institutions with the result that the tendency and opportunity to manipulate the economic life of the nation, to the detriment of the national interests, are present. This is all the more serious, when it is realised that it is the depositors' money that forms the capital with which the banker operates.

The evils of this system were only too bodly revealed when the crisis came in 1931. With the stabilisation of the currency after a period of inflation and the shrinkage in business, the liquid capital began to diminish and the banks found themselves unable to advance the necessary capital to the private enterprises whose needs for ready money were found to be most. With the German commodities on gold prices, when the rest of the world have by some device or other kept their prices with current levels, the exprot trade has dwindled and with the nation impoverished, the purchasing power has very nearly vanished with the assets of the bankrupt business, as the main prop for their business. The big banking institutions appeared to be sound on paper: but in reality they were no better than bankrupt.

With the banking institutions unable to function satisfactorily, the crisis should have come off earlier than it actually did. This was only due to the enormous loans that England and the U.S.A. advanced to

Germany at high rates of interest and this has slowed down the pace of the depression. When the Maratorium was announced and when the foreign depositers withdrew their credit from the German banks, the crisis had come and the State had to come forward to prevent the flight of capital by a series of Standstill Agreements. The Banks had completely lost their reputation and goodwill when they had very little to lend and the little they had went to the few sound concerns whose security was good. Thousands of small and medium-sized firms had to be liquidated.

From the support that the National Socialist Movement received from the middle class population and small scale businessmen, it should be clear that the new movement professes definitely in favour of "reversing the process of over-centralisation in economic life as a result of the autocracy of the banks." This view is itself based on the conception that property and capital are not the exclusive possession of the individual but as well of the nation as a whole. No one has a right to use his property in a way as to injure other individuals or to harm the State. There is no limit to the amount of property that an individual can own provided it is not used to the detriment of the national interests. Banks, as commanders of large capital and credit, are expected to perform their functions with due deference to the national interests.

With such notions about the proper place of Banks in the Nazi State, the Commission of Enquiry has proceeded on its task of investigations and the main outlines of its recommendations therefrom form interesting reading. The report has drawn exhaustive conclusions from the Banking crisis of 1931, and contains extensive programme for reform. It repudiates, to begin with, all tendencies for a nationalisation of the credit system, emphasizing the necessity for private initiative, economic principles and the profitable working of the banks, in order to improve the credit standing of the German banking community. The report stresses the importance of sound money and capital market to meet the task of National Socialist State and the recommendations provide for the establishment of efficient State supervision for all the German Banks and credit institutions.

The establishment of a Bank Supervisory Office to be established is recommended for this purpose. This will be presided over by the President of the Reichsbank and all interested ministers will have representation in this office. It is recommended that this Supervision is to be used only in an elastic and not in a bureaucratic way. The report emphasises that the success of the legal measures intended for the reorganisation of German Banking will thus depend entirely on the appropriate management of this Supervisory Office. This management would be subject to the general policy of the German Government and to the amount of Capital available.

Among the other recommendations are, that all banking and credit institutions are to be subject to a licensing system. It also proposes to provide for an improvement in liquidity and of the proportion between a bank's own means and its deposits: for a separation of the short-term and long-term loan money business and also for the maximum limits of individual credit to be granted by the banks. An improvement in the detailed report to be handed over by the banks every month to the Reichsbank is also recommended. It is of course left to the discretion of the Reichsbank as to what portion of these reports of the banks shall be published, but the Commission emphasises that frequent and regular publicity would be essential for increasing the confidence of the public in German Banking.

No stringent rules are provided for by the new law as regards rates of liquidity or for the limiting of the credit. These are left for the attention of the Banks' Supervisory Office, with due regard to the German economic structure.

CANADA

FROM OUT OF THE DEPTHS

A Bank Chairman's speech before the annual meeting of the Bank is always interesting not only for the authoritative way in which he is able to survey the working of the Bank during the year, but also for the survey of the general business conditions and prospects. During the years of the depression most of these speeches have lost much of their interest as in many cases they formed a sorry recital of dwindling business, and a sincere hope for the future. The speech of Sir Robert Borden, when he presided over the annual meeting of the Barclays Bank last week, forms cheerful reading, unlike many of its kind. That Canada is slowly emerging from the morass of depression although continued progress may be gradual and difficult, was the keynote of the speech. Statistics also bear out this fact. A decided improvement in international trade is evident. The data furnished by the Dominion Bureau of Statistics are interesting in this connection. For the nine months for 1934, the output of newsprint, is 1,882,227 tons compared with 1,452,961 tons for the corresponding period last year; pig-iron productions rose to 279,090 tons compared to 133,870 tons last year; steel products totalled an output of 585,116 tons as compared to 266,829 tons; electric power 15,275, million kilowat hours compared with 12,525 millions last year. Mineral productions had been enlarged by about 23 per cent and the export trade in lumber had increased by 47 per cent. Railway loading showed an increase of 16 per cent and production of motor vehicles had nearly doubled.

The November Review of the Royal Bank of Canada also sounds the note of recovery. World business conditions are improving notwithstanding the anxiety with which Europe and America watch each other. "While there are reasons for this mutual mistrust," says the Bank, "the barometer is rising both within and without the United States. Political stability is steadily increaseing and the manner in which all the Governments have united to prevent repercussions from international incidents during the last summer augurs well for the future peace." In most of these countries, the Bank review points out, cheap and plentiful money has begun to have its normal influence in the investment markets and is spreading employment.

This outline may be too cheerful a survey and one cannot be blind to the fact that Canadian economy during the past eighteen months has been full of contradictions. No doubt there has been industrial activity and some of the industrial indices are reaching new high records. In spite of this activity the Bank returns show a definite contraction. Current loans have fallen from $900 millions in June 1933 to 862 millions in June 1934 and demand deposits have fallen from 535 millions to 486 millions in the same period. Savings deposits have also declined slightly. There has also been a decline in the loan outstandings, contrary to the English practice when loan oustanding increase in periods of trade activity.

This decline in the figures in the Bank returns is attributed by those who have closely analysed the situation not to any retardation in the progress but to the higher prices of wheat that the farmers have obtained which has enabled them to clear off their outstandings. Though the acreage under cultivation of wheat may have declined during the year the increase in price has more than compensated for this fall. Crops too have not been wholly unsatisfactory and it cannot be denied that the country has taken a turn in the road, leaving depression behind. Perhaps it may not be possible to return to the conditions existing prior to the depression days so early; but although the malady is deep-seated, measurable recovery is within the nation's grasp and this state of affairs certainly forms heartening roading.

JUTE AND JUTE GOODS

JUTE

Calcutta, December 13.

Although the undertone of the raw jute market has remained steady during the current week, the top price level touched last week was not maintained. The highest and lowest quotations of the week were Rs. 30 and Rs. 29 respectively. Business in March future has been started and the same is quoting at a premium of Rs. 1-13 per bale over the December future.

Business during the current week was very small, both shippers and mills not following the advance registered during the previous week. Sellers are, however, fully steady and asking Rs. 28-12 for ready Firsts. Buyers are, however, not showing much interest and are inclined to buy at Rs. 28-4. Mills likewise are quoting two annas per maund less than what they paid last year.

The recent announcement made by the Minister of Agriculture regarding the appointment of special officers for the jute restriction plan had had a healthy effect on the market, and the percentage of reduction which is due to be announced early in January next year is eagerly awaited.

JUTE MANUFACTURES

Calcutta, December 13.

Easy conditions have prevailed in the hessians market during the current week. Mostly due to bull sales and ready nine porters at one time touch Rs. 8-12 to close at Rs. 8-14. The report about starting of a new jute mill in Calcutta and also the anticipation of declining seasonal export during the next few months had a weakening effect on the market. No fresh buying interest was visible and in the whole the market was featureless.

Business in ready nine porters was done at Rs. 8-14 and eleven porters at Rs. 11-10 while the same for July/September are quoting Rs. 8-12 and Rs. 11-8 for nine and eleven porters respectively. Heavy goods was a dull and featureless market, quotations being 4 to 8 annas per 100 bags lower as compared to the previous week.

Total reported sales for the week ending Saturday, the 8th December 1934.

COTTON AND COTTON GOODS

COTTON

Calcutta, December 13.

Steady conditions have prevailed in the Cotton Market and the price level is well maintained. Broach April/May is quoting Rs. 227-8 as against Rs. 225 a week ago.

According to the final crop forecast cotton in the United States of America, the estimated yield for 1934-35 is expected to amount to 9.73 million bales of 500 lbs. each. This report indicates an yield of lint cotton per acre of 169.2 pounds compared with an indication of 209.4 lbs. per acre at this time last year.

The local market in spite of increased crop arrival is maintaining the strength. News from Liverpool are also encouraging. But the recent weakness in American stocks, due to profit taking, had naturally a dumping effect on the latter market and the quotation of New York March are no better than 12.58 cents. The crop report is also slightly easy but the local market was already fully discounted early in the week and the latest strength has rather caused short bears to cover their early week sales.

U. S. COTTON SEASON

Crop Reporting Board's Estimates

Washington, December 8.

The Crop Reporting Board of the United States Department of Agriculture, in its final cotton report of the season issued to-day, estimated from the present advancement of picking and ginning considered in connexion with the actual ginnings to December 1, that the total production of cotton in the United States for the season 1934-35 will amount to 9,731,000 equivalent 500-pound bales, not including linters.

The total production (cotton ginned) for the crop of 1933 was 13,177,000 500-pound bales: 12,994,430 in 1932: 17,095,594 in 1931: 13,931,597 in 1930 and 14,824,861 in 1929.

This report indicates a yield of lint cotton per acre of 169.2 pounds, compared with an indication of 209.4 pounds at this time last year. Final figures on yield per acre were 208.5 last year; 173.3 in 1932; 201.2 in 1931; 147.7 in 1930 and 155.0 in 1929.

Final preliminary statistics of the total production by the Bureau of the Census, Department of Commerce, will be issued on March 20, 1935.

COTTON GINNING

American cotton of the growth of 1934 ginned prior to December 1, totalled 9,030,000 running bales, counting round as half bales, the Bureau of Census, Department of Commerce, announced to-day in its ninth ginning report of the season.

This compares with 12,108,000 bales last year; 11,636,958 in 1932: 15,018,403 in 1931 and 12,837,099 bales in 1930.

The next report will be issued on December 20.

BULLION

GOLD

Calcutta, December 13.

Slightly easier conditions have prevailed in the gold market during the current week. London prices have gone down from £7-0-11 to £7-0-5 and the local market has dropped from Rs. 35 to Rs. 34-14 per tola. There has not been much change in London-New York Cross rate quotations at 4.95. The export of gold continues briskly, otherwise is no new feature in the market.

SILVER

Calcutta, December 13.

Further ease has prevailed in the silver market due to bull liquidation and rumours of the possibility of reduction in the import duty in the next budget. London silver has not much changed and still quoting 24⅛d. per ounce, but the local market has dropped from Rs. 67-4 to Rs. 66-8. Stocks in Bombay have gone up to 16,000 bars and in Calcutta to 4,000 bars. Daily offtake in Bombay has decline to 10 bars, while in Calcutta it has come to nil. This state of affairs being due to heavy arrivals from upcountry.

London Air Mail week:

The market has been fairly active and during the past week has shown a very steady tone with prices moving only within narrow limits.

China has again been the chief source of supply, but offerings have been well absorbed, support having been given by America, besides which there has been a good demand from the Indian Bazaars. Re-sales have been made by speculators, but fresh speculative buying has also been in evidence. The undertone seems firm.

The following were the United Kingdom imports and exports of silver registered from mid-day on the 19th instant to mid-day on the 26th instant:—

Imports.	£
Belgium ...	7,839
Netherlands ...	6,928
Germany ...	5,346
British South Africa ...	6,062
Kenya ...	9,478
British India ...	34,476
Australia ...	1,200
British West Africa ...	2,108
Other countries ...	1,235
Total ...	74,672

Exports	£
Central & South America (Foreign) ...	58,634
Bombay—via other ports ...	11,620
New Zealand ...	2,714
Italy ...	16,950
Other countries ...	2,583
Total ...	92,501

Compared with same period 1933	...	3,025,811
Compared with same period 1932	...	3,178,100

Although sugar markets in London and New York have registered a reaction to the declining trend, the markets mostly concerning Java, *viz.*: India and the Far East, have recorded the lowest price levels in sugar history during the period under review, and sellers operations in these markets gave the indications of a panic as regards Java prices, and to our point of view such a policy entirely misrepresented the position here, and the levels at which business was reported were unwarranted and without any respect whatsoever to the indications of the Single Selling Organisation the N.I.V.A.S. A check in this decline is in evidence to-day when the NIVAS shews resistance and declined to sell at prices in line with the levels forced in the Eastern markets concerned. It remains to be seen if this attitude can be maintained and if any improvement will follow in the markets already to a certain degree demoralized by recent operations. Lower prices had been accepted by the NIVAS for Export all round, but sellers were discounting a continuation of the decline. Fair quantities have been listed as sold but some old business concluded months previous has been announced in the interval of this report.

On the 5th sales list was issued of :—

16,550 tons New Assortment Browns
9,360 tons Browns
12,355 tons Molasses.

The New Assortment and Browns were earlier sales to refiners partly to U.K. and partly to China. The Molasses were sold for Shanghai in August and September, but no business has been possible in this assortment for some time.

Sales made include :—

List of Nov. 6th ...	1,015	tons	WHITES to Exporters
9th ...	10,000	,,	WHITES said to be for South China
11th ...	7,800	,,	BROWNS New Zealand refiners

THE BEST AND MOST COMPLETE SYSTEM

Your future is SAFE with the

NATIONAL INDIAN LIFE INSURANCE CO., LTD.

MARTIN & CO.
Managing Agents,

12, Mission Row,
CALCUTTA.

Total sales added for the period were :—

WHITES	...	67,486	tons
BROWNS	...	39,466	,,
MOLASSES	...	12,355	,,

and total to date :

WHITES	...	1,861,974	,,
BROWNS	...	799,549	,,
SOFTS	...	9,570	,,
MOLASSES	...	77,587	,,
		2,748,680	,,

PRICES : for local consumption, basis prices remain unchanged but allowances are made according to quality and condition of the sugars.

for Straits and Island trade the NIVAS came to an arrangement with the K. P. M. whereby this trade is protected to a large extent and kept stabile and the move is calculated to stimulate consumption.

for India—Sales were made during the interval of Whites, mainly for West Coast ports, at F. 3.10 down to F. 2.85. At close we are informed limit has been raised to F. 3.—for West ports.

for China—Whites F. 3.40 down to F. 3.20.
Browns F. 3.25 down to F. 3.00.

China Markets.—From Shanghai we have no special reports except that sellers have continued to reduce quotations and buyers continue to hold aloof.

Hongkong : On the 8th reported Whites done at F. 4.15 Cif.
On the 12th sellers quoted F. 2.50 p. picul (F. 4.05)
On the 16th sellers quoted F. 2.42½ p. picul (F. 3.92½)

Latterly there is small interest in evidence at F. 2.40 per picul (F. 3.90) and a report that sales have been made at this price. Java limits are equal to F. 2.45 per picul Cif.

India—

Calcutta, Rangoon and Madras shew no buying interest.

Karachi made enquiries but we have no reports of business with that market.

Bombay have booked fair business, and prices have been reduced in that market rather rapidly, for instance :

On the 6th Whites were quoted sellers December to March at 5/2¾. French Crystals were offering at the same time at 5/3.

On the 8th at the opening business for the Divali (Hindoo New Year) sales were made of Whites for January-March at 5/1½.

On the 11th sellers quoted 5/- for January-March.

On the 15th sellers quoted 4/10½ for January-March.

On the 16th bids were in the market at 4/9½ Cif January-March.

On the 17th business reported at 4/9 January to May with sellers further and buyers interested at 4/8½ only.

Java parity prices were much above these quotations. At the lowest price said to have been made of F. 2.85 the Cif equivalent is 5/- per cwt. Cif, yet we are faced with actual sales at 4/9 for shipment to a period 6 months ahead.

Stocks on the 17th instant were reported as follows :—

CALCUTTA	...	3,000	tons
MADRAS	...	1,900	,,
RANGOON	...	1,000	,,
BOMBAY	...	5,500	,,
KARACHI	...	7,500	,,
BHAVNAGAR	...	4,000	,,
BEDIBUNDER	...	2,000	,,

On present NIVAS limit we quote CIF per cwt :—

WHITES—to all main ports, Dec.-March ... 5/3.

London—

Terminal Raws reached the lowest point recorded on the 13th instant when December was quoted at 3/9¼ and August 1935 at 4/5. It was difficult to reconcile the values on this basis to producing interests and it was generally anticipated that offerings would not continue at this level. An improvement is in evidence with appreciable advances on the 17th. Closing buyers prices were :—

	Dec.	March	May	August	Dec.
November 5th ...	4/-	4/2¾	4/4½	4/6½	
,, 10th ...	3/10	4/1½	4/3½	4/5½	
,, 13th ...	3/9¼	4/1	4/3	4/5	
,, 17th ...		4/3¾	4/5¾	4/7¾	4/9½

New York—

No sales of Cubans were reported by the Cuban Institute in the interval.

Raw Futures shew some improvement and on the 16th and 17th gained 7 points all round, closing 9 to 12 points advance since the last report of the 5th instant.

Closing prices were quoted :—

	Dec.	March	May	July	Sept.
November 5th ...	1.82	1.70	1.72	1.76	1.79
,, 13th ...	1.82	1.72	1.75	1.80	1.83
,, 17th ...	1.89	1.80	1.82	1.87	1.92

Exchange.—Sterling continued steady with minor fluctuations to-day's Banks buying 3 days sight on London quoted at F. 7.35 per £ delivery to March.

TEA

Calcutta, December 13.

Sale No. 26 was held on December 10 and 11, when 22,600 packages of tea leaf with export rights, 5,500 packages of tea leaf and 7,600 packages of tea dust, both for internal consumption, were sold at an average of annas 8-8, 5-5 and 5 per lb. respectively. The average price at this sale last year was annas 9-11, 4-7 and 5-4 per lb. respectively.

An improved selection from all districts was on offer. Appearance of the dry leaf, however, showed a decline. Leaf teas were in poor request and generally showed a decline of about half-anna per lb.

There was a good demand for all grades of tea for internal consumption. Anything below 5 annas per lb. showed a tendency to advance. Enquiry for dusts was quite good though the prices were more or less unchanged.

The following are the full particulars of Sale No. 26.

Tea with Export Rights.

	1934	1933
Offered	26,019	20,740
Sold	22,645	20,717
Average	0-8-8	0-9-11

Tea for Internal Consumption.

LONDON

At the London auctions on Dec. 6, 5,900 packages of Java and other teas (including Sumatra) were submitted for sale.

There was good competition and prices were maintained.

The following were the lowest prices fetched during the day's auction:—

	Last auction. lb.	To-day's auction. lb.
Common Pekoe	9d.	9d.
Common Broken Pekoe	8⅝d.	8¾d.
Common Orange Pekoe	9⅜d.	9½d.
Common B. O. Pekoe	9d.	8⅞d.
Common B. P. Souchong	9¼d.	8¼d.

The following were the value prices:—

Clean Common Pekoe	9¾d.	9½d.
Clean C. B. Pekoe	9⅝d.	9⅝d.
Clean C. O. Pekoe	11¼d.	11¼d.
Clean C. B. O. Pekoe	9¼d.	9⅝d.
Clean C. B. P. Souchong	9¾d.	9¾d.

The following were the average prices of tea in the London market during the week:—

	Last week lb.	This week lb.
Indian Tea (Northern)	11.66d.	11.72d.
Indian Tea (Southern)	11.50d.	11.53d.
Ceylon Tea	13.39d.	13.26d.
Java Tea	10.69d.	10.19d.
Sumatra Tea	9.31d.	9.53d.
Ceylon Tea Sales		

Ceylon Tea

At the London auctions on Dec. 11, 18,800 packages of Ceylon tea were submitted for sale.

The market was quiet, with common and medium kinds easier.

The following were the lowest prices fetched during the day's auction.

Common Pekoe last auction 11d., to-day's auction 10½d. lb.; Common Broken Pekoe last auction 11¼d., to-day's auction 11d. lb.; Common Orange Pekoe last auction 11d., to-day's auction 10½d. lb.; Common Broken Orange Pekoe last auction 11½d., to-day's auction 11d. lb.

The following were the value prices:—

Clean Common Pekoe last auction 11¼d., to-day's auction 10⅞d. lb.; Clean Common Broken Pekoe last auction 11⅜d., to-day's auction 11⅛d. lb.; Clean Common Orange Pekoe last auction 11¼d., to-day's auction 10⅞d. lb.; Clean Common Broken Orange Pekoe last auction 11⅜d., to-day's auction 11⅛d. lb.

MISCELLANEOUS

WHEAT

Calcutta, December 13.

The conditions in the wheat market have ruled steady though there was not much change in rates. There has been fairly good enquiry for spot goods while the stocks in Karachi are on a decline. But taking the present price and the available stock in the country, under consideration there seems little justification for any appreciable rise in the price of wheat.

LINSEED

Calcutta, December 13.

Quiet but steady conditions have ruled in the linseed market there being more sellers for Beta and more buyers for ready goods. The latter is once again commanding a premium of 2½ annas per md. over May Beta, the latter quoting Rs. 4-9-6 and the former Rs. 4-12 per md. The undertone of the market is not unhealty and even in spite of new crop reports purchases at decline will prove profitable.

STATISTICAL INFORMATION

RAILWAY TRAFFIC

LATEST EARNINGS AND WORKING EXPENSES

The total approximate gross earnings of all State-owned railways for the week ending 17th November, 1934 (33rd week), amount to Rs. 161 lakhs, Rs. 17 lakhs more than the figures for the preceding week and Rs. 2 lakhs less than the actuals for the corresponding period of 1932-33.

The following are the up-to-date approximate gross earnings and working expenses of the State-owned railways from 1st April 1934, as compared with the actuals of the corresponding period of last year :—

Railways.	Earnings. Up to 17-11-33. (in lakhs)	Earnings. Up to 17-11-34. (in lakhs)	Working Expenses* Up to 30-9-33. (in lakhs)	Working Expenses* Up to 30-9-34. (in lakhs)

*Including suspense but excluding appropriation to and from depreciation fund.

A comparison with the figures of the previous week for the principal state-owned Railways shows increases in the approximate gross earnings of all railways except the A. B. and E. B. A comparison with the actuals of the corresponding week of 1933 shows decreases in the approximate gross earnings of all the principal State-owned railways except the B. B. & C. I., E. I. and S. I.

Wagon Loadings.—Comparisons of figures of wagon loadings on Class I Railways for the week ending 17th November, 1934, and for the cumulative period from 1st April to 17th November, 1934, with the corresponding periods of the previous year are as follows:—

During the week ending 17th November, 1934, there were loaded on the broad gauge 78,226 wagons, being 312 more than in the corresponding week of the previous year, or an increase of 0.40 per cent. On the metre gauge there were loaded 46,024 wagons, being 3,551 fewer than in the corresponding week of the previous year, or a decrease of 7.16 per cent.

For the period from 1st April to 17th November, 1934, there were loaded on the broad gauge 2,481,746 wagons, being 147,883 more than in the corresponding period of the previous year, or an increase of 6.34 per cent. and on the metre gauge 1,543,674 wagons, being 72,689 more than in the corresponding period of the previous year, or an increase of 4.94 per cent.

INDIAN CUSTOMS REVENUE

According to returns received in the Department of Commercial Intelligence and Statistics, the grand total of gross Indian Sea and Land Customs Revenue (excluding salt revenue) collected during the month of November, 1934, amounted to Rs. 4,80 lakhs as against Rs. 5,30 lakhs in the preceding month and Rs. 4,36 lakhs in November 1933. The total revenue realised in the eight months ended November, 1934 was Rs. 35,00 lakhs as compared with Rs. 32,33 lakhs during the same period last year. Import duties accounted for Rs. 25,68 lakhs of this amount, export duties for Rs. 2,62 lakhs, excise duties on motor spirit, kerosene, sugar and matches for Rs. 3,34 lakhs, Rs. 1,94 lakhs, Rs. 33 lakhs and Rs. 67 lakhs respectively and Land Customs and Miscellaneous for Rs. 41 lakhs. Increases were noticeable under import duties on cotton fabrics, motor cars, tobacco, kerosene, metals other than iron and steel etc., artificial silk yarn and thread, dyes derived from coal tar, cotton hosiery, silver bullion, coin, sheets, plates and other manufactures, oils, batching, fuel and lubricating, iron and steel, pneumatic rubber tyres and tubes, railway plant and rolling stock, wireless reception instruments and apparatus and tin, block; excise duties on motor spirit and kerosene also showed noticeable increases. On the other hand, import duties on sugar, silk fabrics, cotton yarn and thread, betternuts, motor spirit, boots and shoes, tea, machinery, paper and stationery, toys, games and sports goods, and liquors, the export duties on rice, jute, raw and manufactured and land customs receipts showed noticeable decreases.

TATA IRON AND STEEL

Messrs. Tata Sons, Limited, Agents for the Tata Iron and Steel Company, Limited, report that the total approximate production of iron and steel at the Steel Works at Jamshedpur during the month of November 1934, was :—

Pig Iron	...	...	...	72,550 tons
Steel Ingots	...	...	...	70,400 ,,
Finished Steel	...	...	...	48,400 ,,

JOINT STOCK COMPANIES

Eighty-seven companies, with an aggregate capital of over Rs. 2,70 lakhs, were formed in India during September last against 72 companies, with an aggregate capital of about Rs. 2,52 lakhs, in the preceding month and 81 companies, with Rs. 1,59 lakhs, in the corresponding month of the preceding year, states a report on joint stock companies for the month of September.

Bombay accounted for 21 companies, with an authorized capital of about Rs. 1,21 lakhs. The largest flotation in August was the U. P. National Bank, United Provinces, with an authorized capital of Rs. 51 lakhs.

Twenty-two companies, limited by shares, with an aggregate authorized capital of over Rs. 46 lakhs, having ceased work went into liquidation or were dissolved or otherwise became defunct during September last. Six companies, with an authorized capital of Rs. 36 lakhs, which were in liquidation before September 1, were finally dissolved during the month.

There was a net decrease of Rs. 25 lakhs in the authorized capital of the existing joint stock companies in India in September.

GOLD EXPORTS

Bar gold valued at Rs. 61,85,673 has left Bombay last week for Europe and America, the major quantity being for London, with optional forwarding to Paris, New York and Amsterdam.

The total exports of gold from Bombay since Britain went off the gold standard are now valued at Rs. 20,68,079,245.

RESULTS OF THE CO-OPERATIVE MOVEMENT IN BENGAL 1933-34

There was increase in the collection of Central Banks from Rs. 75.97 lakhs to Rs. 87.72 lakhs and of working capital from Rs. 16,33,70,004 to Rs. 17,16,45,283 and of membership from 817,828 to 819,728. Steps were also taken to secure a more intimate contact of departmental officers with members of the village societies than had hitherto been found possible. Faced with the inability of those to whom they had lent money to repay the loans the co-operative movement was on the other hand remarkably successful in persuading depositors to accept a reduction of rates by 3 per cent. from the "existing average rate of 7½ per cent."

HIDES AND SKINS

Shipments of tanned hides from Madras during November totalled 2,947 bales consisting of 2,538 bales cow hides, 179 bales cow calf skins, 175 bales buffalo hides and 55 bales buff calf skins. About 40 per cent. of cow hides exported in November belong to the lower grades, mostly inferior fifths, which are usually sold to Calcutta as rejections.

Tanned goat skins totalling 1,111 bales and 700 bales of tanned sheep skins were shipped from Madras during November as compared with 1,162 bales of tanned goat and 622 bales of tanned sheep exported during the preceding month.

THE WEEK IN THE EXCHANGES

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, Friday Morning,
December 14, 1934.

Trading in the Stock Exchange again continued on a brisk scale and with the exception of cotton section all markets were definitely firmer during the earlier period. As the session progressed, however, profit-taking was responsible for somewhat erratic feeling which prevailed, a little time of writing. Government securities were very firm due to speculative buying during the earlier part of the week under review while Jute Mills shares once again monopolised the attention of the market. Cottons, on the other hand, remained dull and neglected. A sudden revival of interest was in evidence in Coal shares and hectic buying of certain selected stocks continued for sometime. It is difficult to predict the reasons for this increased attention which was paid to this section. Among Miscellaneous Industrials the enquiry for Public Utility Companies shares continued on a fair scale and in several instances, a further advance in prices was registered. Engineering Section also attracted a fair amount of attention and a good turnover resulted at advancing rates. Sugar, on the other hand, was definitely easier. The undertone in Tea Section remained steady, but business was of a restricted nature owing to easier tendency in Tea Sales both in London and locality.

Government Securities.—Extremely active conditions prevailed in the Giltedge Section during the week-end. All of a sudden the Government paper jumped up a rupee to Rs. Rs. 98-4 and since then the securities market have maintained a firm appearance, although the rate for Paper is now again back to Rs. 97-4, due to profit-taking.

The above sharp rise might be attributed to "bear" covering as enquiry on investment account at this high rate was few and far between.

3½ per cent. Loan (1947/50) also advanced to Rs. 102-15, other long-dated Terminables were also in strong demand at advancing rates, but only a small business was possible due to scarcity of scrip. 4 Per cent. Loan (1962/70) improved to Rs. 111-6. 5 Per cent. Loan (1945/55) to Rs. 119/8 and 4½ per cent. Loan (1955/60) to Rs. 116-6.

3 Per cent. New Loan of 1941 still attracted attention and can be placed at Rs. 101. All the Provincial Loans were well-supported. Short and medium-dated issues remained practically unchanged with only a small business passing. The Imperial Bank's rate of interest on demand loans remained unchanged at 3½ per cent.

Fixed interest bearing securities.—The demand for Jute Mills and sound Industrial Preference shares continued unabated and prices have maintained their firm appearance. Only a small business of a retail nature was reported in Calcutta Municipal and Port Trust Debentures while no business was reported in Jute Mills and Industrial Debentures.

Other Investment stocks.—Imperial Bank's shares have improved further owing to steady buying from Bombay and upcountry. The fully paid-up issues are now quoted at Rs. 1,632 and the partly paid-up issues at Rs. 41. Central Bank's shares are now quoted at Rs. 85-4.

The demand for Light Railway shares continued and especially shares with Government guarantee may be quickly absorbed even at an advance over the last listed rates. Among District Board shares Buktiarpur-Bihar again changed hands at Rs. 67.

Among other transparent shares Calcutta Tramways (ordy.) remained steady at Rs. 20-4, Indian National Airways (Preference ordy.) at Rs. 10. Calcutta Landing and Shipping were dealt in at Rs. 13 while India General Navigation and Railways (ordy.) met with a strong demand and the rate advanced sharply to Rs. 122, but at this figure profit-takers appeared and the price receded to Rs. 115.

Among Insurance Companies' shares a fairly large trade was completed in Concord of India round about Rs. 12-8 premium.

Among Zemindary shares Midnapore Zemindary (ordy.) accounted for a fair turnover round about Rs. 76 and a solitary deal was reported in Humayun Properties at Rs. 12-4.

Cottons.—Dull conditions have obtained in cotton shares and only a limited business was put through. Bengal Nagpur (ordy.) was rather irregular and changed hands at prices varying between Rs. 18-4 and Rs. 19-4. Dunbar (ordy.) recorded a deal at Rs. 150 and Kesoram (ordy.) eased of to Rs. 4-14. New Victoris (ordy.) changed hands at Rs. 1-12.

Coals.—A sudden revival of interest in coal shares was sprung up on Tuesday afternoon and since then owing to hectic buying the prices of certain popular stocks was forced up considerably. Equitable (ordy.) have occupied the price of place which from a quotation of Rs. 26-12 on Tuesday advanced sharply to Rs. 32-4 on Thursday—a rise of 5½ points in practically two days trading. Bengal also advanced to Rs. 260 from a quotation of Rs. 245. Burrakur (ordy.) improved to Rs. 14-8, New Beerbhum (ordy.) to Rs. 15, Sendra to Rs. 13-10 and Union to Rs. 17-4. Amalgamated changed hands up to Rs. 24, Bokaro and Ramgur up to Rs. 9, Hurriladih changed hands up to Rs. 12-12, Raneegunge up to Rs. 36 and Seebpore up to Rs. 15-8 Premium.

New Manbhum have crossed Rs. 60 mark, but at this price sellers appeared. Pench Valley advanced to Rs. 49-8 and East Indian to Rs. 22-4. At the time of writing profit-takers appeared and rates are below the best.

It is difficult to account for the reasons of this sudden revival of interest in the absence of any definite news regarding the Government's intention about the proposed Restriction Scheme and the reduction of surcharge on long distance freight.

THE INDIAN CABLE CO., LTD.

NOTICE

is hereby given that the fifteenth Ordinary General Meeting of Shareholders of the Indian Cable Co., Ltd., will be held at the Registered Office of the Company, 2, Waterloo Street, Calcutta, at 4-15 p.m. on Tuesday, the 18th December, 1934.

The Share Transfer Books will be closed from the 11th December to 18th December, 1934, both days inclusive.

By Order of the Board,
BRITISH INSULATED CABLES, LTD.,
Managing Agents.

Calcutta, 16th November, 1934.

Rumour is, however, afloat in the market that this rise is due to the award of certain Railway Coal Contracts at substantially higher prices than those agreed upon for recent tenders. It is also rumoured that the Indian Mining Association has made a representation to the Government of India to impose an import duty on South African coal.

Jutes.—The market was again very brisk during the current week and a large volume of business was passed at further substantially advancing prices. The feature of this week has been the feverish activity in Inchcape group among which the particular interest was centred round Nuddea and Megna. The former rose as high as Rs. 80 and the latter up to Rs. 58, from a quotation of Rs. 60 and Rs. 47 in a couple of days' trading. At above figures Profit-takers appeared and at the time of writing rates are no better than Rs. 68 and Rs. 49 respectively for Nuddea and Megna. India also advanced to Rs. 430 from a quotation of Rs. 390 again relapsed to Rs. 410. Gourepore improved to Rs. 715 but receded to Rs. 690 at the time of writing. Ganges also advanced to Rs. 372 but again came back to Rs. 360.

Among others the usual brisk business was completed and again prices remained remarkably firm up to the mid-week when owing to easier tendency in the goods market and due to a fall in the prices of raw materials, a reaction has set in and on account of liquidation by weak holders the tone at the time of writing is definitely easier and erratic. Nevertheless the undertone remained quite healthy and a further appreciation in Capital is expected after a temporary set-back. Anglo-India are now back to Rs. 475 from a quotation of Rs. 495. Bally are now quoted at Rs. 218 from a quotation of Rs. 230; Barnagore from a quotation of Rs. 200 have receded to Rs. 185; Budge Budge after their recent spurt have come back to Rs. 365; Champadany are now quoted at Rs. 210 from a quotation of Rs. 216. Fort Gloster are now back to Rs. 625 from Rs. 652; Fort William to Rs. 317 from Rs. 332; Kanknarrah came down from Rs. 580 to Rs. 560; Lansdowne from Rs. 195 to Rs. 185; Standard from Rs. 393 to Rs. 376 and Union from Rs. 540 to Rs. 530.

Howrahs at the time of writing are quoted at Rs. 60-4 from the highest touched Rs. 61-12 and Kamarhattys are now quoted at Rs. 630 from a quotation of Rs. 647.

Clives are now standing at Rs. 34; Empires at Rs. 43-4; Hukumchands at Rs. 16-8; Nationals at Rs. 25-12; Presidencies at Rs. 6-4 and Reliances at Rs. 86; Craig and Waverly which met with a strong demand round Rs. 2-4 and 3-4 respectively have maintained their values.

Electricals.—A definitely better tone was again in evidence in this section and certain selected stocks were in favour.

Muttra Electrics on the expectation of a dividend were marked up steadily up to Rs. 11-4. Benares Electrics remained steady at Rs. 14-4, Bareilly at Rs. 13-8. Agra changed hands at Rs. 127 and United Provinces at Rs. 158. Cuttack Electrics were very popular and were dealt in round about Rs. 8. Dacca accounted for a deal at Rs. 19-6, Patna changed hands up to Rs. 17-4 and Rawalpindi at Rs. 22-6.

Engineering.—This section has attracted a considerable amount of attention of the market and a fairly large trade was completed.

Iron and Steel issues were very popular during the early part of the session and a comprehensive business was reported. Indian Iron and Steel was marked up to Rs. 8-4 and Bengal Iron changed hands up to Rs. 4-4. At the time of writing the prices are however below the best. Indian Iron and Steel at the present price appear to be cheap and a further capital appreciation is expected before long. Indian Standard Wagon (ordy.) attracted a considerable amount of attention of the market and the rate shot up to Rs. 72 from a quotation of Rs. 65 in a days trading. At the time of writing the rate again receded to Rs. 68. Burn & Co. (ordy.) also advanced to Rs. 320 but came back to Rs. 310 towards the close.

Kumardhubi Engineering (ordy.) kept very steady at Rs. 3-8 and are likely to go up soon. At the present rate this share is very cheap. Marshalls were enquired for and fair business was put through up to Rs. 1-7. It is rumoured that this Company will reduce their capital very soon and thereby will wipe out the debit balance. In that event the present prices of shares is very attractive. Arthur Butler kept very steady round Rs. 15-12.

Sugars.—Dull conditions have obtained in this section and only a limited business was put through. Balarampur was again easier at Rs. 18-12. Belsund was quoted Rs. 8-4. Carew & Co. kept barely steady at Rs. 21-2; Cawnpore Sugar (ordy.) at Rs. 34-12; New Savan at Rs. 13-8 and Samastipore Central at Rs. 11-4. Raza Sugars, however, kept steady at Rs. 140.

Miscellaneous.—A fairly large business was reported in their section, the outstanding feature being the strong demand for the shares of B. I. Corporation. Ordinary shares of the said Company advanced sharply to Rs. 3-2 and Deferreds to Rs. 1-15 on strong buying. Ganges Rope was another good feature and the prices advanced to Rs. 307 from a quotation of Rs. 265. Indian Cables kept steady at Rs. 3-2, while Ivan Jones was marked down to Rs. 2-12; Oil shares kept steady so also Paper shares. British Ceylong Corporation are now quoted at Rs. 10-8, Howrah Oil at Rs. 12-8, and Tide Water Oil at Rs. 9-4. Bengal Paper

MUTTRA ELECTRIC SUPPLY COMPANY, LTD.

NOTICE

is hereby given that the Sixteenth Ordinary General Meeting of the above-named Company will be held at the Registered Office, No 12, Mission Row, Calcutta, on Friday, the 21st December, 1934, at 12-10 p.m., for the purpose of receiving and considering the Directors' Report, the Statement of Accounts and Balance Sheet for the half-year ended 30th September, 1934, and to transact any other ordinary business of the Company.

Managing Agents.

Calcutta, the 14th December, 1934.

BOMBAY TELEPHONE COMPANY, LTD.

NOTICE

Notice is hereby given that the **Debenture Stock Transfer Register** and the **Register of Debenture Stock-holders** will be closed from 18th day of December to 31st day of December, 1934, (both days inclusive) for preparation of Interest Warrants.

R. H. Parker.
General Manager & Secretary.

Bombay, 4th December, 1934.

(ordy.) was marked at Rs. 104, Titaghur Paper (ordy.) at Rs. 21-8 and Defds. at Rs. 9-4. Indian Paper Pulp continued its upward trend and are now quoted at Rs. 148 and Upper India Couper Paper Mills recorded a deal at Rs. 142.

Brittania Biscuit kept steady at Rs. 7-12, Calcutta Ice at Rs. 8-12. Great Eastern Hotels recorded a deal at Rs. 80 and Firpos at Rs. 13. Kangra Valley Slate was dealt in at Rs. 145. Bengal Aerating Gas at Rs. 83 and Bengal Chemicals (ordy.) at Rs. 325.

Rubbers.—Rubber shares were generally easier, there being more sellers than buyers at the moment although commodity market remained unchanged.

Teas.—Business was very much restricted owing to lower prices realised in the last two sales and due to easier London advices. The undertone, however, remained steady and any improvement in tea sales will be immediately reflected in shares values. The stock position in London remained unchanged so far, but a substantial reduction is expected early next year.

BOMBAY STOCK EXCHANGE

(*By Wire*)

(From our Correspondent)

Bombay, Thursday,
December 13, 1934.

Money Market.—Money was better this week with call money quoting as high as 2 per cent., though it fell to 1¼ per cent. The tightness of money conditions at the beginning of the week was reflected by the huge amount for sterling tenders on Wednesday.

Exchange.—The Exchange market was steady with Banks selling at 1s. 6-3/64d. until February; 1-6 1/32 March-April and 1s. 6d. May-December. Banks were buying three months bills at 1s. 6 1/8d. for December-January-February.

Securities market.—The securities market was steady with 3½ per cent., quoting around 97-8 though on heavy selling pressure, business was done at 96-12, in the course of the week. We believe that 5 per cent., 1945/55 at current price of 119-8 is still undervalued. The following were the closing quotations. 3 per cent. 1941 at 100-15, 3½ per cent. at 97-4, 1947/50 at 102-14, 1960/70 at 111-6, 1955/60 at 116-4, 1939/44 at 108-4, 1935 at 101-9, 1940/43 at 109-6, 1945/55 at 119-7 and 1938/40 at 109-4, Bombay Development at 103-6, 1943 at 105-13. *As to the future we find that there are unmistakable signs of gilt-edged securities firming up and it is even expected that 3½ per cent. may go beyond par.* Considering outstanding amount of 120 crores we are of opinion conversion of this is not likely at present. On the other hand it is quite likely that 3½ per cent. sterling may be converted on lower yield basis. Hence we do not consider it advisable to sell 3½ per cent. paper and buy 3½ per cent. India sterling securities whereas 3½ per cent. Indian Sterling securities redeemable on or after 5th October, 1948, may be recommended as promising.

Shares.—This market ruled active with steel shares dominating.

Textiles.—On strength in cotton and other sections of this market Textiles were firm and higher though it closed slightly easier on account of profit taking. We understand that Bombay mills by working double shifts are producing at present about 75,000 bales of cloth whereas the offtake is 60,000 bales per month. Inspite of improvement shown in offtake for the last few months the continuance of double shift would result in heavy stocks at the end of the year. Therefore it is not desirable to allow this state of overproduction and if the mills come to an agreement to work single shift we expect leading companies to make good profit in the coming months. Therefore we welcome the recent move to convene an All-India conference of representatives of textile mills to settle this question. We hear Morarjee Mills are doing so well as will enable them to distribute a small dividend and shares are quoted at 1510. *These may reach higher levels.* Bombay Dyeings are done as high as 955 and closed at 933-12. Central Indias firmed up to 340 and closed at 326-14. Gokaks were quoted at 198-12, Swadeshis at 230, Kohinoors at 215, Centuries at 313-12, Sholapurs were steady at 2900, Lakshmis at 855, Vishnus at 1580 and Simplex at 100.

Hydro-Electrics.—This group ruled steady with good enquiry in Tata powers which were done as high as 1,440 and closed at 1,422-8. Andhra Valleys were done as high as 1,675 and closed at 1,660 Hydros were steady around 167-8.

Iron and steel.—Steel shares showed remarkable activity this week with Ordinaries touching 112 and Deferreds 480 though they closed easier at 110-4, 467-8 respectively on account of profit taking. Second preferences were done as high 170 and closed at 168.

As mentioned in the previous report this Company's Directors may recommend payment of an interim dividend to preference share holders from current year's profits which are reported to be exceedingly satisfactory.

We think ordinary shares have now crossed speculative point and can now be considered as an investment, For a twelve month lockup—ordinaries seem very attractive.

Cements.—There has been some activity in cements this week particularly in Indian Cements and Gwalior. The Rise in Indian Cements were due practically to rise in Gwaliors, for Indian Cement Company even after distributing 15,000 Gwalior Shares still has more than 12,000 Gwaliors which at present levels have appreciated considerably in value. Further Indian Cement Company had to write down 30 rupees per Gwalior share When Gwalior Company reduced the face value of shares from 100 to 70 and has built up an investment reserve fund of 6,87,333 rupees. Considering Capital appreciation in Gwalior and Shahabad Cement Shares we think a portion of the investment reserve can be used for distribution by way of larger dividends to shareholders and therefore we think *these shares have scope for further appreciation.*

As for the cement industry in general domestic quarrels among cement companies over the allocation of quotas and severe competition of British cement in Gujerat and Kathiawar are the two depressing factors at present. Over and above this there is a possibility of an excise duty on cement production in the next budget. In spite of the above adverse factors the improved earnings shown by leading companies for the current year as well as the increased consumption of cement warrant us to believe that some of the companies would be able to pay better dividends than last year. It is reported that Bundi Cement Company's earnings are likely to be 4 lacs more for the year ending 31st December, 1934, than last year. The closing quotations are Bundi 34, Gwalior, 120, Indian 370-10, Katni Deferred 1,200, Ordinary 336-4, Okha 194-6, Punjab Ordinary 24, Shahabad 346-14, United 70.

Miscellaneous.—British Burma Petrols on news of bad report eased down to 3-8-6 and closed at 3-13. Our recommendation for purchase of petrols was based on the future possibilities of this company and in view of the new developments taking place at present we expect this company to show improved earnings next year. Hence we consider these shares as a promising lockup at current levels. Bombay Burmahs on publication of Directors' Report and Balance Sheet for year ending 31st May, 1934, had a setback from 425 and were done as low as 382-8, though they closed slightly better at 400. The Corporation has earned a profit of Rs. 573,011 after writing off for depreciation on properties compared to Rs. 767,204 last year. It is also unfortunate to note that the Government of Burma has reduced the concession of 30 per cent. in all the rates of Timber royalty to 15 per cent. for the year 1934/35. Considering the huge stocks of timber at present and low timber prices we are led to think that the shareholders may not get any dividend at close of the current year. Therefore, it is advisable to liquidate holdings of Burmahs as early as possible. New shares are quoted at Rs. 138-12. As mentioned in our previous reports we find Bombay Telephone Company has given notice of its intention of converting its 6½ per cent. Debentures to 4 per cent. from the 1st of January, 1935. The Meeting of the Debenture holders has been convened for the 21st of this month. The shares which were around Rs. 120 during last week are now quoted Rs. 114-8 and they seem to have chances of rising to better levels.

Belapur Sugars were slightly easier at Rs. 255 and we maintain the same attitude as before. Scindhias are talked of higher and we also favour purchases around the current

THE PORIAPUR COLLIERIES LIMITED

NOTICE

is hereby given that Thirty-third Half-yearly Ordinary General Meeting of the above-named Company will be held at the Registered Office, No. 12, Mission Row, Calcutta, on Saturday, the 29th day of December, 1934, at 12-10 p.m. for the purpose of receiving and considering the Directors' Report, the Statement of Accounts and Balance Sheet for the half-year ended 30th September, 1934 and to transact any other ordinary business of the Company.

The Share Transfer Books of the Company will be closed from the 22nd to 29th December, 1934, both days inclusive.

By Order of the Board,
MARTIN & CO.,
Managing Agents.

Calcutta, the 14th December, 1934.

price of Rs. 15. Bombay Steams have improved to Rs. 310. Trams are steady at Rs. 160-10. Indian Radio Deferreds and Ordinaries are quoted at Rs. 525 and Rs. 501-4.

Banks and Insurances.—Bank shares have been in better enquiry during this week with Imperial Bank shares showing a good rise. Fully paids, after touching Rs. 1,637-8 are now quoted at Rs. 1,626-4 and Partly paids at Rs. 415-10. Barodas improved to Rs. 104; Central Banks steady at Rs. 34-14. Unions have shown noted improvement from Rs. 5-14 to Rs. 6-3 but closed at Rs. 6-1-6 and Bank of Indias are now standing at Rs. 120-8.

Considering the promising outlook for giltedged securities in general and the current yield on Bank securities, the bank shares in general and Imperial Bank shares in particular ought to move up with rise in securities. While we cannot be sure of an increased dividend on Imperial Bank shares, there are already indications pointing that Bank would be able to pay a larger distribution to shareholders in the coming year. *Since there is no chance of any sizeable decline in giltedged securities and agreement with the Reserve Bank of India is also favourable to Imperial Bank, the outlook for these shares is bright and we expect good appreciation in value of these shares.*

With strength in securities, Oriental Life has improved to Rs. 4,450 by a rise of 300 points but closed at Rs. 4,425 and New Indias were done as high as Rs. 41 though closed at Rs. 39-8. Vulcans were steady at Rs. 6-8.

MADRAS STOCK EXCHANGE

(*By Wire*)

(From Our Correspondent)

Madras, Dec. 13.

Government Securities.—The securities market was very active during this week. Paper touched Rs. 97-15-0 but fell back to 97-7-0. 4 per cent. 1960/70 and 5 per cent. 1945/55 also improved to 111-8 and 119-13 respectively. In preference shares East India Distelleries were done at 27-7½.

Banks.—Imperial Bank shares improved, fully paid ups being quoted at 1638 and contributories at 418. There were no transactions of note in this section except in Travancore National banks at 52 and Indo-Commercial banks at 85.

In Public utilities Rangoon Telephones were quoted at 13½, Andhra valley at 1670 and Vellore electrics at 12¾ Ex dividend.

Mills.—Shares in this section were generally firm. Buckingham and Carnatics were quoted at 207 and Coimbators at 42.

Sugars.—In this section Mysores came in for strong enquiry with no sellers in evidence. Belapurs were quoted at 162-8 and United Breweries at 126-8.

Rubber.—The rubber market was very quiet.

Teas.—A few transactions were reported in this section, and there were several price advances over last week. Peermades changed hands at 25½, Peria Karamalais at 41-6 Ex dividend, Nilgiri Neerugundis at 1⅞ and Vellamalais at 9½.

Miscellaneous.—In this section Tata Iron and Steel Ordinaries were at 108 and 2nd Preferences at 169.

LONDON STOCK EXCHANGE

On the Stock Exchange during the week under review most of the markets were dull during the first half of the week. But on Tuesday it showed a welcome change from the dull tone recently in prevalence and there was increased activity in most sections. Gilt-edge attracted more buyers, several Indian loans being quoted higher and the general tone of the section was very steady. 3½ per cent. Indian Stock 1931 was quoted at 97 over 96½ the previous day, Consols at 89¼ over 89⅛, Victory Bonds at 117¼ over 117. The next day they were steady at last level prices. On Wednesday gilt-edge was the most animated section and the tone was very firm, both Indian Loans and Home funds showing many price advances. 3½ per cent. Indian Stock 1931 was quoted at 98, Consols at 90⅞ and Victory Bonds at 117⅝. Among other sections Tea shares declined on selling by speculators who bought for the new quota and also on the passing of several interim dividends. Rubbers were quiet but steady. Oils were irregular. Kaffirs and Nundydroogs showed an improvement and other minings were steady. Tobaccos also improved. Home Rails have shown a better tendency but business in shares has not been brisk.

Other Industrials were not very well supported but nevertheless showed some good features.

NEW YORK STOCK EXCHANGE

The Stock Exchange Market has been steady despite the irregular price movements. Numerous extra dividends, absence of trading excesses and moderate trade gains make the nearby outlook bullish. All markets are awaiting President Roosevelt's address.

COMPANY REPORTS

THE TITAGHUR PAPER MILLS COMPANY LIMITED.

The directors beg to submit the Audited accounts for the half-year ended 30th September, 1934, which, after allowing for Debenture and General Interest, Commissions and Taxation, show a profit of Rs. 6,55,936-11-6. There has been set aside for depreciation the sum of Rs. 3,29,331-11-9, whilst Rs. 10,000 has been transferred to Indian workers Pension Fund Account, and Rs. 90,000 to Debenture Redemption Fund Account. The balance remaining at the credit of Profit and Loss Account, after giving effect to these transfers, amounts to Rs. 2,26,604-15-9.

The following is a statement showing how the above balance has been allotted to the respective Dividend Accounts in accordance with clause 3-A, Section 2, Sub-section (*a*) of the Company's Articles of Association :—

	Rs.	A.	P.	Rs.	A.	P.
Balance available				2,26,604	15	9
Preference Dividend 8 per cent. per annum ...	46,000	0	0			
Ordinary Dividend 10 per cent. per annum ...	21,875	0	0			
				67,875	0	0
				158,729	15	9
Transfer Half share of surplus Profits to ordinary Shareholders Dividend account				79,364	15	11
Transfer Balance Half share of surplus Profits to Deferred shareholders dividend account				79,364	15	10
				1,58,729	15	9

The division of the profits for the half-year ended 30th September, 1934, is therefore as follows :—

Preference shareholders dividend account	46,000	0	0
Ordinary shareholders dividend account	1,01,239	15	11
Deferred shareholders dividend account	79,364	15	10
	2,26,604	15	9

In accordance with the terms of issue of the Deferred shares there is no balance brought forward or carried forward in the main profit and loss account. The balance due to each class of share is shown in the respective shareholders dividend account in the balance sheet.

We propose the balance at the credit of the respective dividend account be disposed of as follows :—

	Rs.	A.	P.
Preference shareholders dividend account—			
Amount alloted as above	46,000	0	0
In paying a dividend on the Preference shares at the rate of 8 per cent. per annum, free of Income Tax	46,000	0	0
Ordinary shareholders dividend account—			
Balance brought forward	3,617	15	2
Amount allotted as above	1,01,239	15	11
	1,04,857	15	1
In paying a dividend on the ordinary shares at the rate of six annas per share, free of income tax	65,625	0	0
In paying a bonus on the ordinary shares at the rate of three annas per share, free of income tax	32,812	8	0
In carrying forward	6,420	7	1
	1,04,857	15	1
Deferred shareholders dividend account—			
Balance brought forward	286	14	4
Amount allotted as above	79,364	15	10
	79,651	14	2
In paying a dividend at the rate of four annas per share, free of income tax, on 318,455 deferred shares which rank for dividend as from the 1st April, 1934 ...	79,613	12	0
In carrying forward	38	2	2
	79,651	14	2

The dividend recommended on the ordinary shares is equal to 11¼ per cent. per annum on the value of those shares prior to the reduction of capital.

Working results may again be considered satisfactory. The production of paper for the half-year was greater than that for the previous six months.

The volume of sales was maintained but prices still show a reduction.

The new bamboo pulp plant and machinery for No. 1 Mill, Titaghur, have been designed, approved and ordered. Satisfactory progress has been made in the manufacture of the plant and the erection of the additional building required to house it.

A. McKerrow, Jamnadas Khemka, W. M. Craddock, B. M. Birla, G. L. Scott, Badridas Goenka, Bhagwandas Bajoria—Directors.

F. W. Heilgers and Co.—Managing Agents.

THE NEW TETTURYA COAL CO., LTD.

The Managing agents beg to submit the report and accounts for the half-year ending 31st August, 1934.

The loss carried forward from last half-year is

Rs.	A.	P.
1,59,232	3	6

To which has to be added :—

JUBBULPORE ELECTRIC SUPPLY CO., LTD.

NOTICE

is hereby given that the Sixteenth Ordinary General Meeting of the above-named Company will be held at the Registered Office, No. 12, Mission Row, Calcutta, on Friday, the 21st December, 1934, at 12-5 p.m., for the purpose of receiving and considering the Directors' Report, the Statement of Accounts and Balance Sheet for the half-year ended 30th September, 1934, and to transact any other ordinary business of the Company.

The Share Transfer Books of the Company will be closed from the 14th to 21st December, 1934, both days inclusive.

By Order of the Board,

MARTIN & CO.,
Managing Agents.

Dated Calcutta, 12th December, 1934.

		Rs.	A.	P.	
Loss for the half-year	...	7,854	7	8	
Debenture Interest	...	3,500	0	0	
Depreciation	...	8,906	3	0	
					20,260 10 8
There remains a loss to be carried forward of					1,79,492 14 2

The Managing Agents have again waived all interest charges for the period under review.

Sales.—The demands for Dharmaband 15 Seam Coal has been steady throughout the half-year, but unfortunately an outbreak of cholera in the neighbourhood adversely affected output and it was not possible to take full advantage of the orders offering.

No. 15 Seam Development.—opening out above the 50' fault referred to in our last report has been retarded by the persistence of jhama instrusions in the Seam.

Development to the dip and below the fault has, however, made good progress.

In order to reduce pumping costs, which have been very heavy, a suitable generating set has been installed together with the necessary boiler plant. This set was started up on the 9th instant and is running satisfactorily. A considerable reduction in pumping costs is expected during the current half-year.

Output.—Raisings and despatches of all grades of coal as compared with the preceding half-year were as follows :—

	Raisings tons.	Despatches tons.
Half-year ended 31st August, 1934 ...	47,387	48,904
Half-year ended 28th February, 1934 ...	31,177	31,610

Carry forward	...	...	...		26,893	5 3

During the period covered by the accounts now submitted, the issued capital of the company was increased to Rs. 1,50,000 by the issue of 25,000 fully paid shares of Rs. 2 each. These shares were issued at a premium of Rs. 2 and the amount so received has been added to the reserve fund which now stands at Rs. 1,15,000.

The works have been kept fully employed during the half-year and a considerable amount of business obtained was in the nature of re-construction work as a consequence of the earthquake which occurred in January.

HUKUMCHAND JUTE MILLS LD.

The Directors submit herewith the Audited Accounts of the Company for the half-year ended September 30, 1934, showing a profit on Revenue Account of Rs. 8,99,968-9-4.

After deducting Rs. 1,33,750 for Debenture Interest, Rs. 1,11,659-1-3 for Commission and Rs. 3,92,500 for Depreciation and making sundry adjustments there remains a balance of Rs. 2,77,463-6-2 at credit of the Profit and Loss Account which includes Rs. 13,466-4-7 brought forward from the last half-year's account.

The Directors now recommend to dispose of the same as follows :—

	Rs.	A.	P.
Dividend on 40,000—7% Preference Shares of Rs. 100 each at Rs. 3-8 per share ...	1,40,000	0	0
Dividend on 400,000 ordinary shares of Rs. 7-8 each at -/4/- per share *i.e.* 6 2/3 per cent. per annum	1,00,000	0	0
Total ...	2,40,000	0	0

leaving a balance of Rs. 37,463-6-2 to be carried forward.

In accordance with the Agreement entered into by all members of the Indian Jute Mills Association the mills worked 40 hours a week during the period with 15% looms sealed up.

The prospects for the current half-year are satisfactory and sales have been made at favourable rates.

Kanailal Jatia, J. R. Coulthard, Jugmohan Prosad Goenka, Moonghi Lall Tapuria, Sheokissen Bhatter.—Directors.

WORLD OF INDIAN FINANCE

Calcutta, Decr. 21.

The stringency, which set in in the money market a fortnight ago, has continued nearly unabated during the whole of this week. In fact, there was a good rise in call money rates over the levels of last week. The squeeze on Tuesday last was so great that call money was quoted as high as 4½ per cent. Although rates have eased since to more conscionable levels, the tightness still continues. At the close call money is still quoting over 3½ per cent. The quotations for term deposits are still unchanged, a circumstance which suggests that the basic conditions of the money market are essentially unchanged and that the sharp changes of the last fortnight are confined almost to the call money market. It is apparently no easy task to account adequately for the changes that have occurred in the money market. There can be no mistaking the stringency which, perhaps, came from nowhere, but which has been with us for nearly three weeks now. All the conclusive signs of stringent money are in evidence. Banks have felt the need for cash more strongly with every week. The applications for sterling on the tender day reached the colossal figure of £48½ million, necessitating an allotment of only 2 per cent., which compares with 15 1/3 per cent. of last week, and 58 per cent. of the week before. The exchange market has firm rates. Sales of Treasury Bills have been on the low side. The market is applying for less ; and intermediates have dwindled almost to nothing. For such changes, a variety of causes must have operated, each in itself not only inconsiderable but almost indiscernible, the cumulative effect of which is felt all round. There is, in the first place, the highly enhanced interest which is shown in almost all sections of the stock exchange. In India we have had a deep-rooted and long standing boom in giltedge, the bright features of which are securing an increasingly wider appeal. In stocks and shares, prices have been going up over a longish period ; and it would not be an exaggeration to say that in the stock exchanges generally there is a boomlet and in jute shares a real boom of considerable magnitude. It is also believed that crop movements have begun to make their demands on the money market.

While these factors will doubtless have to be given their place in the picture, the really decisive factor must be looked for in the adjustments of banks and financial houses for the year-end. Though giltedge has independently enjoyed a sustained and widespread interest, it is the banks which have been responsible for sales of Government securities to the public, which are variously estimated at Rs. 1½ crores to Rs. 2 crores. Such large-scale movements cannot occur without causing a substantial firmness in money market circles. We still believe, in spite of all that has occurred during the last three weeks, that there is no adequate and convincing reason for expecting the firm money conditions to continue into what remains of this busy season.

As mentioned already, the tight money conditions are adequately reflected in the Treasury Bills sales. The results of the last week's auctions show that only Rs. 189¾ lakhs were applied for by the market, against Rs. 225 lakhs last week and Rs. 254 lakhs in the week before. It is, indeed, a great change from 3¾ crores of mid-November, though of course, these figures would not be exactly comparable, in as much as the middle of November was a period of exceptionally heavy maturities of Treasury Bills. Nevertheless, the change during the last one week is very marked. More important than the fall in the volume of applications is the rise in the average rate of accepted tenders from Rs. 1-7 per cent. to Rs. 1-7-9 per cent. Sales of intermediate Treasury Bills between December 12 and 17 amounted to only Rs. 25,000 against Rs. 36¾ lakhs last week and Rs. 65 lakhs in the week before. With the increase in the average rate of accepted tenders and the fall in the sales of intermediates, the Government have felt obliged to raise the tap rate from Rs. 1-5 per cent. to Rs. 1-6 per cent. We pointed out at some length last week, that the rate at which sales of intermediates are proceeding might tend to upset the Treasury Bills position, with obvious consequences to the ways and means position of the Government. We hinted at the possibility that the Government might try to increase the weekly sales by auctions. There is no doubt that in the conditions which rule in the money market at present such an increase would not have any effect. The increase

in the tap rate is a development which follows almost automatically from the increase in the average rate of accepted tenders; and, to the extent that it may be called automatic, it is far the better course to adopt. While it offers a better inducement to the market for taking Treasury Bills, it does not parade the needs of the Treasury unduly. Treasuries are on tap at the new rate of Rs. 1-6 per cent. between December 19 and 29. As there are very few working days during this period and as it coincides with a period of stringency in the money market, it is more than probable that the sales of intermediates during this period may not amount to much. The Treasury Bills that will mature during the remaining days of December, amount to as much as Rs. 6 crores. It is to be wondered whether any large part of this amount can be secured from the market by way of sales of Treasury Bills. Up to the present moment, however, there has been no noticeable disequilibrium between sales and maturities of Treasury Bills.

The giltedge market has seen quieter conditions during this week. The tightness of money has had its effects on giltedge. Apart from this, the market must, in the nature of things, pause and take breath for its next advance. It is said that bankers have not been either sellers or buyers to any appreciable extent. The London market has also been dull and has not given the Rupee securities the motive power which they would at the moment seem to be in need of. The giltedge market, therefore, opened quiet with 3½ per cent. paper quoting Rs. 97-2 but it was

---

Owing to the Christmas holidays there will be no issue of "Indian Finance" next week.

Editor.

---

not long before Paper sagged to Rs. 96-10, which was touched on Wednesday. The intrinsic strength of the giltedge market asserted itself and the rally which followed took Paper again to Rs. 97 and, at the close of Friday 3½ per cent. Paper is quoted at Rs. 97-9. The feature of the giltedge market during the week is 4 per cent. Punjab Bonds, in which interest and activity developed all of a sudden resulting in a rise of more than one point.

The notable feature of the market during the present time is the immense shortage of scrips. It is well known that with the growing confidence in 3½ per cent. Paper and Government securities in general, genuine investors have come more and more into the picture. And, at the same time, the market, too, has developed an overbought position with consequent increase in the difficulty of doing *budlee* business. Bombay is reported to have felt this handicap, and it is not a matter for wonder that scrips should be scarce. For despite the day-to-day fluctuations no holder of Government securities can possibly persuade himself that a big rise in the New Year is out of the question. There is, therefore, a tight grip over scrips. The position could have been altered to some extent, if banks would operate. But as has been mentioned, banks are reported to more or less keep aloof. The causes which have brought about the scarcity of scrips are also the causes which encouraged the continuance of a bullish view of giltedge. It cannot be lost upon the market that the most profound cause of unsettlement in the London market has now passed. We refer to the publication of the report of the Joint Parliamentary Committee and its acceptance by Parliament. In spite of the fact that there was at no time much reason to doubt that the Government would not secure the necessary support in Parliament, there were many who found it difficult to gauge exactly the strength of the Opposition. Now that the debates are over, disclosing as they have done a very substantial majority in favour of the Government, and even the bill has been formerly introduced in the House of Commons, such suspicions as there might have been must have been laid to rest. London has also had a phase of stringent money which may pass away before long. Money conditions in London are closely linked up with the position of the Continental gold currencies and the public attitude thereto. The last two years have demonstrated the extent to which the London market can acquire a surfeit of funds every time there is nervousness about some European currency or other. In our *Finance Abroad* columns we have discussed these questions at length; and it will pe found that, though at the moment there is comparatively more confidence in the gold currencies, their position is far from secure. When the turn of the tide comes, another big rise in London giltedge will become inevitable.

The exchange market has been quiet during the week. Tight money conditions have brought about a very firm undertone; and banks are buyers of three months bills at 1s. 6 5/32d., for three mails. The sterling tenders on Wednesday last showed the great squeeze for money, as £48½ million were tendered for and the allotment came down to a bare 2 per cent. It would have been a great relief to banks, if Government had obliged banks with another sterling tender day and the decision that the next tender day is to be in the New Year must appear to banks as somewhat arbitrary.

The closing rates are: 1s. 6 1/16d., January 15 T.T. with sellers up to February 15; 1s. 6 1/32d., January-May T.T. and 1s. 6d., T.T. onwards.

Bills may be quoted: 3 months bills were quoted 1s. 6 5/32d., December-January but there were small buyers at 1s. 6 1/8d., up to January 17; 1s. 6 1/8d., February-May and 1s. 6 3/32d., onwards.

Call money was quoted from 3½ per cent. to 4 per cent.

Thursday evening.

There has been during the week a continuance of the lull in the triangular contest of the dollar, sterling and franc. The sterling-dollar and the sterling franc rates show no appreciable changes over last week and the fluctuations are within a very limited range. The London price of gold remains at about 140s. 8d. But no one will mistake the steadiness of the cross rates for a sign that the international exchanges are going to have smooth sailing in the months to come. Last week we published a cable from *Eavesdropper* referring to an analysis of the question of the future price of gold by Mr. Paul Einzig ; and it was pointed out that gold must still be on an upward trend and that, when the time comes for the relinking of the world's currencies in terms of gold, gold will be found to have a value near about 170s. as against 140s. 8d. which is the ruling rate to-day. Those who have followed the discussions in these columns will not find it difficult to appreciate the reasons behind this prognosis. It has been suggested time and again in these columns that the devaluation of the Continental gold currencies is really a matter of time and that the difficulties encountered by the Gold Bloc are increasing every day. We have on various occasions examined the position of such important gold currencies as the franc, the lira and the belga, and, in all these cases, though at times, we have had to refer to the weakening of the movement for devaluation owing to political changes, we have adhered to the view that the more fundamental readjustments necessary for the preservation of the gold standard are yet to come and are not likely to come, and that eventually these countries, even like Great Britain and the United States, must find themselves forced off gold.

Mr. Einzig apparently has reasoned on the same lines. The whole argument against the possible continuance of the gold standard countries on their present parities has been strengthened by the position of the lira to-day. Mr. Einzig has examined this at great length in recent issues of the *Financial News* after a visit to Italy, in which he came in contact not only with Signor Mussolini, but also with the principal schools of monetary thought in that country. And, in fact, we are indebted to Mr. Einzig's articles in the *Financial News* for much of the data on which we based our judgment about the future of the lira. It is, no doubt, difficult to follow the changes in the day to day fortunes of the Italian currency from Calcutta. But the basic position is such that one may rule out the chances of any radical change. Signor Mussolini will have to bring into play far more exceptional powers than he has so far shown, to be able to perpetuate the present value of the Italian currency. We have, indeed, no doubt that if Signor Mussolini decides in favour of maintaining the present parity, he will not lack the energy or the power of domination to issue the necessary fiats. But such action will only tend to postpone the evil. And besides, it is to be wondered whether the Duce will decide on a course which must eventually bring him in conflict with the overhelming majority of economic interests in the country. The Italian Dictator has too long been in power to neglect the changes of a natural reaction. It would be unwise in the extreme to help or strengthen such reaction by visiting the people with the inevitable effects of a policy of drastic deflation without which the lira would be doomed. It is true that in the past the Duce has brought about cuts in wages with the same ease with which other Governments might bring about changes in the ordinary routine of administration. But there is a point at which the faith in, and enthusiasm for, the Government would fail to impel people to put up with hardships in daily life. It may, therefore, be taken that the lira will be among the first, if not the first, to initiate the second deflationary movement in international finance.

While dwelling on the difficulties of the gold countries to continue on their present parities, it is necessary to mention that such decline as has occured in the sterling during the last fortnight has been due primarily to the debtor sentiment that prevails in regard to the Continental gold currencies. This weakness is somewhat unexpected for the market believed that in the latter half of December, sterling must be on an upward trend. The unexpected development cannot obviously be attributed to a belated revival of the autumnal demand for dollars so that it may be mentioned incidentally that our reading of the situation in regard to the cessation of the commercial demand for the dollar has not been disproved. Such demand as there is still is possibly on account of the speculation in Wall Street in which France is participating to a much greater extent than is generally believed. In fact the whole course of sterling this year has been somewhat out of the normal. The seasonal depreciation of sterling was broken in October by political developments on the Continent. The Marseilles Tragedy caused a flight of funds to England and the realisation of its exact significance caused a reversal soon after. And then in November came the bear raids on the Belga. There are still the strained relations between Hungary and Yugoslavia, which may cause their repercussions on the foreign exchange market at any time. There is also the Saar Plebiscite which is such a fruitful field for untoward incidents and misunderstandings between the powers of which we have already had more than a fair sample. In the light of these one can only conclude that the weakness in sterling of the last fortnight is due more to a reaction from the exaggerated strength of the earlier period than a positive reassurance about the stability of the gold standard currencies.

The recent loan which a Dutch Banking Syndicate granted to Belgium and its not inconsiderable efflux on the Belgian exchange, confirmed the general reading of the situation. The Belgian authorities have had recourse to such a loan not so much because the gold reserves of the bank are inadequate as because a loan of this kind would serve to keep away from the public eye the effects of the bear raids on the reserves. Though the loan is in the name of the Dutch Syndicate it is learned that other gold countries have participated in this accomodation. So that it is a new instance of the gold countries standing together in defence of a weaker member. But as indicated already, the loan has not made much of a difference in the position of the Belga. The strength that followed the news about the loan proved to be shortlived. And there is reason to think that in the future the position might get worse. For so long as the public can asses the strength of the bear raid by the position of the gold reserves, there will be a safeguard against undue alarm. If, on the other hand,

PUBLICATIONS OF THE LEAGUE OF NATIONS

JUST OUT; "STATISTICAL YEAR-BOOK OF THE LEAGUE OF NATIONS" 1933-34

270 pages ... ... in wrappers Rs. 6 14 0
in cloth Rs. 8 8 0

This is the most complete and authoritative international compilation of official statistics regarding the economic, financial and social activities and the population of all the countries of the world.

These statistics including Vital Statistics, Labour Conditions, Production, International Trade and Balances of Payments, Transport, Public Finance, Monetary and Banking Statistics, Prices, Conversion coefficients for weights, measures and currencies, have been brought up to the end of 1933 or the beginning of 1934 and have been reduced, whenever desirable, to a common measure.

The present edition marks an improvement on its predecessor in the abundance of its information on various matters of great topical interest, such as public finance and the distribution of population by age, groups and occupations, etc. Another new feature consists of the tables on the production and use of nitrogen and of index-numbers of employment.

"REVIEW OF WORLD TRADE", 1933

A presentation and analysis of world trade in 1933 — about 60 pages ... ... Price Rs. 1 12 0

This volume compares the trade of the world of continental groups and of individual countries in 1933 and in recent years. It shows the contribution of each country to the total, the changes in the direction of trade and in the relative importance of the groups of commodities of which it is composed. The analysis demonstrates that, while the value of trade diminished again in 1933, the quantum increased, mainly owing to the larger exports of raw materials; exports of manufactured products were, however, also slightly higher than in 1932. Special attention is devoted to the trade in the most important crude materials and foodstuffs. An annex contains revised indices of the prices and quantum of the rade of individual countries.

AGRICULTURAL AND INDUSTRIAL PRICES IN INDIA

In a leading article last week we have dealt at some length with the improvement that has occurred in recent times in the prices of agricultural produce and the significance of such improvement to the question of world recovery. We have urged the view that, in as much as there has been during the last year and more a greater rise in the prices of agricultural products than in the prices of manufactured articles, one of the fundamental maladjustments is thus being set right. We have also set down the circumstances which detract from the value of the rise in agricultural prices to the total purchasing power in a country; but on balance we adopted the view that however much the importance of agriculture may have decreased, the improvement in agricultural prices is the most heartening feature in the present situation.

* * *

While last week we confined ourselves to the world situation it is necessary now to attempt a similar inquiry in the case of India. No one would need to be told of the difficulties in the way of accomplishing such a task. We are not confident that with the data and with the time available to us, we could make a study with any approach to accuracy. Our aim is only to suggest the lines on which such an attempt may be profitably made. Apart from the difficulties arising from the inadequacy of the statistical data, there is also the fact that in every material respect the trends in India have been diametrically opposite to those in the rest of the world. In the more advanced industrial nations there have been attempts, owing to the stress of the depression, to stimulate agricultural production at home and to maintain towards that end a higher level of agricultural prices. Industries in most countries cater largely for export markets and are offered no more help than the depreciation of currencies. The result is that State policy was helpful to agricultural prices putting on a greater increase than manufactured articles. We trust that it is not necessary to emphasise here that we are speaking only of broad trends and that the exceptions to and the numerous deviations from this rule are not overlooked.

* * *

In India however, the State has done little or nothing for the prices of agricultural products. On the other hand, just when the depression was bearing very heavily on the agriculturists and the various agricultural products were touching record low levels, the State chose to persist further on the path of protection to indigenous industry. It is significant that it is during this period that protection to sugar and salt was granted and the duties on cotton piece goods were increased. In fact, the surcharges levied at the time of the Emergency Budget all acted to the disadvantage of the agriculturist. It is, therefore, idle to expect that improvement in agricultural prices in India can be so well ahead of the prices of industrial products as in the foreign countries referred to in our leading article.

* * *

A scrutiny of the available statistics in this regard would not seem to strengthen this *a priori* conclusion. For owing to a number of different causes, agricultural products in India have during the last one year shown a considerable improvement in prices. We give at the end of this article a table showing the prices of the agricultural staples and also the prices of what may be considered to be the necessaries of the masses of this country.

* * *

It will be seen from that table that, barring wheat, which has barely maintained the level of 1933, every agricultural commodity has shown an appreciable improvement within a year. It is interesting to examine the reasons for the rise. In the case of rice, it is, indeed, difficult to locate the causes of the improvement. The general situation both in India and in the world at large has not changed; and within the country there has ever been a serious deterioration. India is still subject to the imports of Siamese rice, against which South India has been protesting with equal loudness and futility for the last six or seven months. And it must also be added that the quotations given in the table are for Burmese rather than Indian rice. When we are considering the basic economic conditions in India the price of Indian rice is obviously the more important. And in this regard reports from South India are to the effect that this year's harvest has been able to command a distinctly higher price than last year's. In fact, the higher level of the prices of rice is a few months old now. The reason is to be sought primarily in the drought which threatened some time ago almost all the parts of South India. But fortunately the drought did not prove to be as serious as it was feared at one time. It has turned out to be a blessing in disguise. While the drought was instrumental in bringing about a marked rise in prices, its disappearance was not followed by any serious setback. Certain districts are still reported to have had a harvest much below normal. But the fall in output is not such as to account in full for the higher level of prices, which must therefore be attributed to the facilities that are now being provided for the free movement of rice within the country. It may be said confidently that so far as rice-growers are concerned, there has been an appreciable increase of purchasing power within the country.

* * *

The next important crop of South India, namely, groundnuts, may also be considered here. It will be seen from the table that the price of groundnuts has gained by more than 20%. This is due, as is well-known, to the fall in the acreage in groundnuts, consequent on the low level of prices, and to the threat of drought referred to already. It is not yet known how far the growers of groundnuts are in a position to reap the advantage of the higher prices. Even on the supposition that the fall in acreage is widespread and the harvest has been poor, the improvement in prices is such as to induce the belief that the growers of ground nuts will have more spending power in their hands than they had in any year of the depression.

* * *

The factors that affect the cotton market are too well-known to need a recapitulation here. Only the other day, Sir Purshotamdas Takurdas, speaking at the East Indian Cotton Association, referred to the strength which the American President has succeeded in giving to the world cotton markets. The improvement in the price of cotton is perhaps the most salient feature of the world's agriculture in recent years. The cotton growers of India have, indeed, had a sharp turn in their fortunes. With President Roosevelt pulling up

prices with a mighty hand and the Japanese market opened again by the Indo-Japanese trade agreement, the cotton growers have easily passed from a state of utter penury to some degree of comfort, if not affluence. The place of wheat in Indian economy is not susceptible to any exaggeration. Confined to one corner of the country, shorn of its foreign markets and assured of a protected market at home, the significance of wheat to the national economy as a whole is highly restricted.

* * *

It remains to relate the changes in the prices of agricultural products to those in manufactured articles. Though the policy of discriminating protection may encourage the idea that the prices of manufactured articles must be on the increase, a scrutiny of the figures will show that there has not been as much increase as one would expect. The effects of high protection have been neutralised in a variety of ways. The table given in the middle of this page contains the prices of some of the industrial products and we give below the index numbers of the articles relevant to our discussion.

Index Numbers of Prices of Agricultural and Industrial Products.

	Average 1933	Nov. 1932	Nov. 1933	Nov. 1934
Cereals ...	66	67	70	71
Pulses ...	92	95	82	83
Sugar ...	131	147	123	124
Tea ...	95	63	117	112
Oil Seeds ...	73	75	76	99
Raw Jute ...	41	40	35	42
Raw Cotton ...	80	94	72	76
Cotton goods ...	113	112	113	118
Other manufactures ...	95	98	95	91

It is comforting to see that the protectionist policy has not brought about any serious disequilibrium and that the restoration of the equilibrium of agricultural and industrial prices is no uphill task.

THE VICEROY AND BRITISH BUSINESS.

The address of His Excellency to the Associated Chambers of Commerce in their annual session at Calcutta is always awaited with keen interest by the business community and the public in general. For it is an opportune moment for an official survey of all matters of importance to the commercial community. The intimate interest, which British business in India has in the political developments, also urged the Viceroy to refer though only in broad outlines, to the outstanding political issues. The interest of the Viceroy's speech, therefore, is exceptional and it has been heightened since the Government of India took the regrettable step of declining to take any part in the proceedings of the Federation of the Indian Chambers of Commerce. Our Delhi correspondent in his letter, which appeared in last week's *Indian Finance*, encouraged us to expect an even more momentous speech than His Excellency has delivered. This disappointment notwithstanding, His Excellency's address is notable for the recapitulation of developments in

spheres of intimate interest to business, the appraisement of the general position of trade and industry at present and the indications of the future policy of the Government. It need hardly be said that the attitude of reasoned optimism, which actuates the world of business to-day all over the globe, was also prominent in the proceedings of the Associated Chambers. His Excellency was well advised to give the weight of his support to this welcome change in business sentiment. And, to the extent that the deadlocks of trade relations are gradually relaxing, there is less need to dwell on the major problems. When we consider that the budget has been balanced, the credit of the Government raised, decline in prices arrested and internal trade quickened, as evidenced by the improvement in the railway balance, and the slipping markets retained by one or two trade agreements with the foreign countries concerned, the Government may consider themselves again free to devote their attention to the comparatively less momentous problems. In his address to the Associated Chambers His Excellency the Viceroy rightly took up for the purpose of review such topics as the working of the Indo-Japanese Trade Agreement, the Tea Restriction Plan, the International Convention for the Safety of Life at Sea, the training of Indians for the Indian Mercantile Marine, the development of Trunk Telephones, aviation and rail-road transport. Though the Government apparently are keeping an open mind on the net results of the working of the Indo-Janpanese Trade Pact, they claim that trading relations between the two countries have been put again on a basis of cordiality. The Viceroy also referred to the offer of the Government of Italy to send a trade delegation to this country with a view to discuss the problems of Indo-Italian trade. Reference was also made to the general foreign exchange position and the repercussions of Germany's import restrictions on India's exports to that country. It is, of course, too much to expect that the Viceroy would, at this stage, indicate the lines on which the solution is attempted. But he held out the assurance that the situation is receiving the closest attention of the Government. Likewise in the matter of the International Convention for the Safety of Life at Sea and the Convention regarding Load Lines, which were concluded in 1929 and 1930 respectively, we are now told that the Conventions will come into force in British India on January 1, and uniform standards will be adopted by all contracting Governments.

The benefits of Tea restriction have established that the international agreement has been to the good of the industry in all producing countries. The Viceroy paid the best compliment when he said that the necessity for interfering with the operations of the Licensing Committee was almost non-existent, and that it was the success of the Tea Restriction that impelled the Government to agree to a similar agreement in the case of rubber. But it is somewhat disappointing that no reference was made in His Excellency's speech to the agitation that South India has been carrying on for sometime, and the principal points of which have been proved to the hilt regarding the inadequacy and inequitability of the quota awarded to South India. It is to be hoped that His Excellency's silence on this matter does not presage the complete failure of the agitation carried on by the South Indian rubber planters. The Viceroy referred also to the record of work done by the training ship *Dufferin* in turning out young officers for the Indian Mercantile Marine. We now learn that the Government have taken the next step in the programme and that from the beginning of next year, *Dufferin* will have among her cadets a number of engineer cadets who after a three years' training on the ship followed by practical training in workshops in India, will be, in due course, qualified to take up appointments as engineer officers in the Indian Mercantile Marine. The Government have received the assurance from engineering firms and shipping companies in India regarding the workshop training and the subsequent employment of the India cadets trained on *Dufferin*. The progress that India has made in the development of Trunk Telephones and Civil Aviation was also reviewed by His Excellency. The developments in this regard are so well known that they need hardly be dealt with here. But by far the most important of the various improvements is that referring to the development of transport in this country. A further step in the development of a rail-road policy in India will be taken up next year when a Transport Advisory Council will meet for the first time, consisting of the members of the Government of India concerned, sitting with Provincial Ministers and their advisers. According to the Viveroy, their discussion will cover a wide range which will crystalise policy in some matters and indicate others which will be further investigated with some advantage. It is well-known that one of the principal obstacles in the development of transport is that the present allocation of authority in the Provinces and formation at the Centre are conducive to some conflict ; and it is, therefore, encouraging to learn from His Excellency that not only will provincial autonomy remove some of these difficulties, but the Government of India are also to make the necessary readjustments.

* * *

Those sections of industry which are concerned with the rebuilding of bridges will be gratified to learn that the Government are taking advantage of the extension of the duration of the Central Road Account and the increase in the portion of this account from 10 to 15 per cent. to make grants for many roads and bridges which are important links in our chain of road communication and which without assistance from the reserve would, in all probability, not have been constructed for many years to come. Out of the same source, the Government have been able to defray the

cost of a comprehensive survey of road development in Sind, and a similar survey for some of the Eastern States and parts of Orissa.

* * *

While the information contained in His Excellencys' review is unduly welcome, the major interest will yet attach to his appraisement of the general position in the country and the indications, such as he has given of the future policy of the Government. Of all the improvements that have occurred, His Excellency rightly gave the pride of place to the improvement in the credit of India which stands to-day higher than it has been for the last twenty years. It is significant that for the first time since 1896, the Government of India have issued a loan on a 3 per cent basis and that this now stands at par. His Excellency showed a commendable capacity for objective judgment when he gave every factor its proper place in this development, and did not exaggerate, nor for the matter of that, under-rate, the extent to which the sound financial policy pursued by the Government was responsible for the phenomenal increase in the credit of the Government. Nor did His Excellency overlook the somewhat disturbing implication of high giltedge prices, namely, that trade is still making a low demand on the resources of the capital market. But, said His Excellency, if the high level of Government loans is partly a reflection of limited demand for trade, it must not be assumed that India is still in the trough of the depression. It is quite true that recovery is not as rapid as one might wish, but there are definite signs that it is in process. One can easily guess that he gave in support of this review the weekly figures of railway earning, the improvement in the value of India's exports and imports, the increase in the general level of industrial production, particularly in the cotton textile industry, iron and steel industry, cement, kerosene and petrol. His Excellency also drew attention to the fact that in a number of primary commodities there has been a slight recovery from the disastrously low level of prices to which the cultivator had been subject. It is, therefore, quite reasonable to suggest that India has passed the last point of the economic crisis, and that some sort of upward movement is in evidence.

* * *

But from the standpoint of policy, the more important question is whether the stage has arrived when one can rely on the recovery to gather its own momentum or, in other words, whether the stage has arrived when further progress may be left to what may be called the automatic process. His Excellency himself anticipates such a question and asks how far this upward movement will go.

* * * *

In answering the question the Viceroy has thought it necessary to pronounce himself definitely against the view widely entertained in this country that the economic salvation of India is to be sought in increasing measure of self-sufficiency. His Excellency is quite definite that India cannot recover independently of the world at large and that this inter-dependence between India and the world outside necessitates an expansion of India's foreign trade. His Excellency suggests that in order that trade may recover India will have to import goods from foreign countries more freely, as such increased imports are a necessary condition of the expansion in volume and value of our export trade.

We believe that it is a matter for regret rather than rejoicing that His Excellency should have pronounced so decidedly on one of the most crucial problems of our time. The Viceroy, we are sure, knows that there is no guarantee whatever that if India were to increase her imports by adopting a liberal commercial policy, she would not be ploughing a lonely furrow and would not be exposing herself to the dangerous consequences of such a step. If, as in so many other matters, we are to take a leaf from Great Britain, India should rather seek to regulate her imports than to expand them. Great Britain has been inspired in her foreign trade policy by a strong scepticism in the possibility of international free trade returning to the world in the years to come. That she has a great deal to gain from a regime of free trade has not impelled her to do anything more than keep the door open for it, while safe-guarding herself in other respects. The position of India is far different. Past experience has shown that there can be no increase in her standard of living if India continues to be a mere exporter of food stuffs and raw materials. And yet this is specifically the role which His Excellency would assign to this country. We are at a loss to know why India should not attempt to develop those industries which she attempts to feed in foreign countries with her exports of raw materials. It is too late in the day to suggest that India is not fitted to develop such industries at home or that the retention of such raw materials in part would bring about a reduction in the standard of living. Considering the anxiety that is evinced in Great Britain for expanding the import trade in India it is difficult to avoid the feeling that His Excellency was indulging in a sort of special pleading for the measures which are already well on the way.

* * *

We trust we shall not be misunderstood as underrating the value of foreign trade to India's national economy. But we feel we must protest when arguments which are suitable to the conditions of Great Britain are applied wholesale to the case of India. We do not deny that it will be difficult, if not impossible, for India to move forward from the present position to a position of predominant self-sufficiency. Such a course would involve a multiplicity of problems to which we are hardly equal. It is, indeed, necessary, to regain as far as possible the foreign markets for our raw materials. But it

If it's Life Assurance

Then ask the National Mutual. This worldwide Association has the very best "life" terms.

Since 1869, when the National Mutual was first established, they have paid out over Rs. 455,925,900/- in claims alone.

At the present moment over Rs. 1,283,393,500/- are assured under current policies. This is a mark of public confidence that cannot be passed over when considering that all important question of a life policy.

BIK. 3

must be recognised that such possibilities are severely limited and that the industrialisation of India would not require, and to some extent would not permit us, to be the exporter of raw materials to the same extent as before. It might be wondered whether we are not merely stressing immaterial differences and whether we are giving any intelligible lead in the matter of practical policy. We may, therefore, make our point clear by urging that the dependence of India on the world outside is unduly exaggerated, that she cannot desist from the path of developing industries for which she is fitted by nature, that she should always put the requirements of her industrialisation above the requirements of her foreign trade and that no step that she might take for the expansion of such foreign trade should involve a setback for any of her staple industries.

INDO-BRITISH TRADE TREATY.

Replying to a question in the House of Commons, Mr. Runciman, President of the Board of Trade, stated on December 13, that the main difficulties connected with an Indo-British Trade Pact had been surmounted and that an agreement would be settled at an early date. Mr. Runciman further announced that the agreement would not deal with the actual rates of duty on particular commodities, but would lay down the principles to be followed in fixing Indian protective duties on United Kingdom goods, including textiles and other merchandise subject to protective duty. Britain on her part had, Mr. Runciman added, given certain assurances in return.

* * *

The brief interrogations that followed the statement of the President of the Board of Trade were significant. A member enquired if Mr. Runciman was aware of the feeling in Lancashire that the terms should be disclosed before the Indian Reforms Bill passed its second reading. Mr. Runciman replied that he was in touch with the representatives of Lancashire. Another member asked if Lancashire manufacturers, in addition to the Manchester Chamber of Commerce, had been consulted. Mr. Runciman's reply was that the industries concerned were fully represented at a conference that very morning. Sir Joseph Nall (Conservative-Hulme) took the interpellations a stage further by asking whether in the Indo-Japanese Agreement the duty was reduced from 75 to 50 per cent, while in the present case the reduction was merely five per cent. and he understood that that had not been agreed upon; to which there was no answer. Outside the House of Commons, Lord Derby, in a speech at Southport, said that the pending commercial treaty with India constituted the acid test whether India was prepared to show goodwill towards Britain.

* * *

The expected has come to pass, only with more precipitancy than was expected. In commenting on the subject in *Indian Finance* of November 17, we said that the danger of converting fiscal policy from a matter of principle to a matter of bargain is becoming increasingly apparent all over the world. In India, it is very much more than a potential danger, as the bargain is made for this country by others and extraneous considerations are often imported into India trade treaties. When the first statements about the negotiations were made in the House of Commons by Sir Samuel Hoare, Indian Commercial bodies, wise in the wisdom of experience, took alarm at another official project of British-Indian commercial reciprocity and asked that India should be made aware of the nature of the negotiations. The Government of India have given an assurance that the salient features of the proposed Pact, as soon as a basis of agreement is reached, will be placed before the public. In view of Mr. Runciman's statement in the House of Commons the treaty is for practical purposes *fait accompli* and India will in the near future be presented with a settled pact.

* * *

In this case there is every cause for grave concern, bearing in mind Mr. Runciman's categorical statement that the actual rates of duty on particular commodities would not be dealt with, but that the agreement would lay down the principles to be followed in fixing protective duties on United Kingdom goods. British politicians are indeed, dissatisfied with the Commercial safe-guards.

PROSPECTUS

1. **Objects of the Company.**—The Company has been formed for the purposes mentioned in the Memorandum of Association and particularly for the purpose of establishing and carrying on the business of manufacturing sugar and its bye-products and the cultivation and development of sugar-cane.

2. **Factory.**—It is intended to erect a double Carbonation semi-electrically driven Sugar Factory of the latest design, having a crushing capacity of 600 tons of cane per day, with provision for expansion up to a maximum of 800 tons per day.

The design, erection and operation of the Factory will be conducted under the supervision of Dr. Francis Maxwell, D.Sc., M.I.Mech.E., F.C.S., who, besides being on the Board of Directors, will act as General Adviser to the Company on all matters relating to sugar production particularly in its technical, manufacturing and agricultural aspects.

Dr. Maxwell is a recognised authority in the Sugar Industry and has had world-wide experience extending over the past 25 years in the design, erection and operation of Sugar Factories. He has been, and continues to be, actively connected with The Raza Sugar Co., Ltd., as a Director and also as that Company's Advisory Technologist, and his personal supervision and operation of its Factory has contributed largely to the success which that Company has achieved.

Dr. Maxwell has spent the last summer revisiting the principal sugar-producing countries and this Company is fortunate in securing his co-operation and active guidance.

The Factory is expected to commence operating in November, 1935, on a production of not less than 160,000 maunds of sugar per annum.

3. **Location of Factory.**—The Factory will be erected in the Rampur State, which is on the main East Indian Railway line between Bareilly and Moradabad.

A lease of a suitable Factory site having an area of approximately 37 acres is being granted to the Company by the Rampur State free of all cost. This lease is to be for a period of 30 years with an option to the Company for a renewal for a further 30 years on the same terms. A Broad Gauge Railway Siding from the Factory to the East Indian Railway main line will be laid down, and the Rampur State Light Railway, which is at present being used exclusively for the cane supplies of The Raza Sugar Company, Limited, will also be available to serve this Company.

4. **Cane Supplies.**—The soil conditions in Rampur are considered ideal for the growth of sugar-cane and the nitrogen and phosphorus content is reported to be even greater than in Java. The sugar-cane areas are well served by the canal systems and the water level is at an average depth of ten feet. The average monsoon rainfall is satisfactory.

The estimated production of sugar-cane in the Rampur State last year was over 7,000,000 maunds, of which approximately half was readily accessible to the Broad Gauge and to the State Light Railway systems.

The cane acreage in the State has increased by 25 per cent. in the past season, and there is every reason to believe that an ample supply of cane will be available both for this Company as well as for the Factory of the existing Sugar Company in the State, namely, The Raza Sugar Company, Limited. As an additional safeguard it is proposed to inaugurate an agricultural farm for the purpose of growing early and late maturing cane for the requirements of both the Factories in the State.

5. **Agricultural Farm.**—By agreement with the Rampur State, The Raza Sugar Company, Limited, is entitled to lease up to 10,000 acres of adequately irrigated land for the purpose of sugar-cane cultivation upon the following terms, namely:—

(*a*) Any such lease to be for a period of thirty years with an option to The Raza Sugar Company, Limited, to renew the same for a further thirty years upon the same terms.

(*b*) Each such lease to contain powers to The Raza Sugar Company, Limited, to determine the tenancy of the whole or any part of the land comprised therein on giving the Rampur State not less than six months' previous notice in writing.

(*c*) Such fair and equitable land revenue as may be agreed between the Rampur State and The Raza Sugar Company, Limited, to be payable in respect of such land, which revenue is to be subject to revision by agreement every fifteen years.

With the approval of the Rampur State an agreement is being arrived at with The Raza Sugar Company, Limited, whereby this agricultural land will be developed jointly by both Companies for their mutual benefit, and for this purpose it is proposed that a separate Agricultural concern should be constituted (which will be jointly owned by The Raza Sugar Company, Limited, and this Company) for the purpose of developing cane cultivation for both the Factories.

6. **Communications.**—The Factory will be well situated in the way of communications, being served both by the East Indian Railway Broad Gauge Railway System and the Rampur State Light Railway System.

7. **Agreement with the Rampur State.**—His Highness the Nawab of Rampur has consented to become a Patron of the Company, which he has promised to assist and an Agreement has been entered into with the Rampur State, the main points of which are as follows:—

(*a*) The Company will obtain a lease of a suitable Factory site; the main terms of the lease are referred to in this Prospectus under the heading Location of Factory No. 3.

(*b*) The Company will obtain exemption from Octroi for initial plant and machinery. The Company will be liable to Octroi in the uusual way on all other imports into its Factory (excluding sugar-cane and other raw products required for the purpose of manufacture).

(*c*) The Company will obtain exemption for a period of fifteen years from all State Taxation other than from Sugar Excise Duty on sugar exported into British India. The rates of this Excise Duty will be in accordance with the rates levied in British India, with the proviso that the amount receivable in any year by the State (after the deduction of a sum equal to one-third of the gross amount payable, which sum will be devoted by the State to the general development of the sugar industry) will not be less than a sum calculated on the basis of a royalty of one anna six pies per maund of sugar manufactured by the Company. This exemption is only to be subject to modification in so far as the State may become subject to constitutional obligation to levy any corporation or other tax and duty.

(*d*) The State has consented to the institution of an Agricultural concern which will be jointly owned by The Raza Sugar Company, Limited, and this Company. Particulars of this Proposal are referred to under the heading Agricultural Farm No. 5.

(*e*) Full protection is assured to the Company whereby no other Sugar Factory will be allowed to be erected within the Rampur State for a period of 25 years, except with the consent of the State, of The Raza Sugar Company, Limited, and of this Company.

(*f*) The Company is assured of the full co-operation and assistance of the State Revenue Department regarding advances to cultivators against crops.

8. **Estimated Capital Cost.**—It is estimated that the Factory, complete with its equipment and all necessary buildings, will cost approximately Rs. 16,50,000.

9. **Estimated Profits.**—The Raza Sugar Company, Limited, owns a Sulphitation Factory in the Rampur State, with a capacity last crushing season of 500 tons per day. This Factory was only completed late in the crushing season and in consequence was able to operate for only half of last crushing season, but in spite of this The Raza Sugar Company, Limited, earned a net profit equivalent to over 13 per cent. on its issued capital. This Company enjoys benefits and advantages similar to those of The Raza Sugar Company, Limited. Taking into consideration that the plant is to be a Carbonation Factory with a minimum capacity of 600 tons per day, and basing selling prices at below those ruling to-day, it is estimated that the Company can expect to earn an annual profit after providing for depreciation and expenses of management equivalent to about 15 per cent. on the capital of Rs. 18,00,000 now being offered for subscription.

10. **Agreements.**—The following Agreements have been or will be entered into on behalf of the Company:—

(1) An Agreement made the 11th day of December, 1934, between the Chief Minister to the Rampur State of the one part, and R. E. Grant Govan on behalf of the Company of the other part under which the Rampur State has undertaken to take up and pay for shares in the Company of the face value of Rs. 3,000,000. By virtue of the Agreement the Rampur State has agreed generally to promote and further the Company's interests.

(2) An Agreement between the Company of the one part and The Raza Sugar Company, Limited, of the other part whereby the formation of this Company is approved and whereby it is provided that an agricultural concern will be formed (which will be jointly owned by The Raza Sugar Company, Limited, and this Company) to develop cane cultivation on behalf of both Companies.

(3) An Agreement between the Company of the one part and Messrs. Govan Brothers, (Rampur), Ltd., of the other part for the reimbursement of all sums paid and the indemnity against liabilities incurred including preliminary expenses referred to hereunder.

(4) An Agreement between the Company of the one part and Messrs. Govan Brothers, (Rampur), Ltd., of the other part for the appointment of that Company as Managing Agents, the terms of which are referred to in this Prospectus under the heading of Managing Agency.

11. **Interest of Directors.**—The following Directors are interested in the formation of the Company to the extent indicated:—

Mr. R. E. Grant Govan, The Hon'ble Sir Homi Mehta and Mr. C. E. M. Judge are Directors of Govan Brothers, (Rampur), Ltd., the promoters and Managing Agents of the Company.

Dr. Francis Maxwell is interested to the extent that he is one of the promoters of the Company and also that he will act upon terms to be arranged as General Adviser to the Company on all matters relating to sugar production.

12. **Directors' Qualification and Remuneration.**—Under the Articles of Association the qualification of every Director other than an *ex-officio* Director shall be the holding of, in his own name or jointly with any other person whether beneficially or as Trustee, 50 shares in the Company and until otherwise determined by the Company in General Meeting, the remuneration of each Director for his services as such shall be Rs. 600 per annum.

The Articles of Association provide that the Managing Agents and also the Rampur State so long at it holds shares of the aggregate face value of not less than Rs. 1,00,000, shall respectively have the right to appoint two *ex-officio* Directors. One of the Directors so appointed by the Managing Agents shall be Chairman of the Board.

13. **Preliminary Expenses.**—Messrs. Govan Brothers, (Rampur), Ltd. and Dr. Francis Maxwell are the promoters of the Company and they are meeting all preliminary expenses of and incidental to the formation and registration of the Company and they will be entitled to be reimbursed all this expenditure on the date the Company commences business. They will be entitled to be repaid all sums expended and to be indemnified against all liabilities incurred. Messrs. Govan Brothers, (Rampur), Ltd. will also be the Managing Agents of the Company upon the terms set out under the next clause of this Prospectus and Dr. Maxwell will, as previously mentioned, act as the Company's General Adviser, but neither Messrs. Govan Brothers, (Rampur), Ltd. nor Dr. Maxwell will receive anything for their services as promoters. The preliminary expenses are estimated not to exceed Rs. 15,000 (exclusive of any brokerage or underwriting commission).

14. **Appointment of Managing Agents and their Remuneration.**—The Articles of Association provide that the first Managing Agents of the Company shall be Messrs. Govan Brothers, (Rampur), Ltd. and their successors for a period of 20 years certain from the date of the incorporation of the Company and thereafter until removed by an Extraordinary Resolution of the Company passed at an Extraordinary General Meeting especially convened for that purpose on not less than six calendar months' notice and at which not less than three-fourths of the issued capital

of the Company is represented. The remuneration of the Managing Agents is to be as follows:—

(*a*) An allowance of Rs. 1,000 per mensem.

(*b*) A commission of 10 per cent. on the net yearly profits of the Company after deducting working expenses, interest on Debentures or other loans and after making provision for depreciation of plant and machinery, but before placing anything to reserve or other special accounts.

The Managing Agents shall also be entitled to charge and be paid for all actual postages, telegrams, stationery and the like expenses and the Company shall pay the remuneration of all persons employed solely in the Company's business and shall bear such proportion of the remuneration of any person employed by the Managing Agents, partly in connection with the business of the Company, as the Directors may determine.

15. **Underwriting.**—As already indicated applications have already been promised or received for 120,000 shares equal to Rs. 12,00,000. A further 60,000 shares equal to Rs. 6,00,000 have been underwritten for a commission of 3 per cent. on the amount thereof.

16. **Minimum Subscription.**—The minimum subscription upon which the Directors will proceed to allotment is Rs. 12,00,000.

17. **Documents.**—Copies of the Memorandum and Articles of Association of the Company and of the Agreements referred to above can be inspected at any time during the usual business hours at the Registered Office of the Company at Rampur, or at the office of the Solicitors, Messrs. Orr, Dignam & Co., Calcutta.

A copy of the Company's Memorandum of Association is printed in the fold of this Prospectus and forms part of it.

18. **Application for Shares.**—Application for shares should be made on the form accompanying this Prospectus and sent to the Company's Bankers together with a remittance of the amount payable on application. Where no allotment is made, the deposit will be returned in full and where the number of shares allotted is less than the number of shares applied for, the balance of the deposit will be applied towards the remaining payments. Failure to pay any future instalment on shares allotted when due will render previous payments liable to forfeiture. Applications for lots of less than 25 shares will not be entertained.

19. **Brokerage.**—A brokerage of As. 4 per share will be paid by the Company on allotments made in respect of applications bearing the stamp of any recognised firm of Brokers.

Copies of the Prospectus and forms of application for shares may be obtained from the Registered Office of the Company at Rampur or from the Managing Agents or from the Company's Bankers or Brokers.

Dated the 12th day of December, 1934.

YEAR END SUPPLEMENTS

The year-end sees the financial journals coming out with special supplements of various kinds, which should go a long way to help the world of business to appraise the developments of the Old Year and form correct ideas about the New. Our own Commercial Supplement is due to appear in the last week of January, partly to comcide with the anniversary of *Indian Finance* and, more, in order that the facts and figures necessary for review of the whole year might be less defective. *Commerce* has brought out an *Insurance Supplement* which is true to type, with lengthy surveys of the more prominent Companies and a review of insurance during the period covered in the review. The *Indian Industry, Trade and Transport Supplement* of *Capital* which is always issued towards the end of the year, traverses the wide field indicated by its title. The leading article is, as may be expected, a survey of the year which has been very nearly left behind. Another notable contribution is the Review of the Jute Industry; and the numerous developments that are of interest to this industry are not only chronicled, but also critically judged. Questions of transport are given their due importance. But we should deem the article on "Labour and Conciliation" by Mr. J. F. Gennings by far the most important. It explains the idea behind the latest efforts of the Bombay Government at conciliation, in a manner that almost persuades other provinces to follow this example. When India threatens to outdo the most advanced industrial nations in the matter of trade disputes and strikes, Mr. Gennings' article calls for careful study.

THE BULAND SUGAR COMPANY LIMITED

The formation of the Buland Sugar Company Limited, the prospectus of wich is published elsewhere in this issue, marks another step forward in the development of the sugar resources of our Native States. Travancore and Mysore have had for some time up-to-date sugar factories working within their domains. Hyderabad has recently taken steps to investigate the possibilities of the state in this regard. Rampur has had the Raza Sugar Company in working; and the success of this venture has encouraged its Managing Agents, Messrs. Govan Brothers, Limited, to start the Buland Sugar Company Limited. The Managing Agents, threfore, are not engaged in a merely adventurous project of dubious possibilities. They are treading known and familiar ground. The Company has the advantage of the services of a technologist of good standing in Dr. Maxwell. The authorised capital of the Company is Rs. 25 lakhs, out of which only 180,000 shares of Rs. 10 each are offered for public subscription. The shareholders of the Raza Sugar Company are given preference in this instance. Considering the abundant supply of cane and the certainty that the technical efficiency of the factory will be ensured at the maximum, the invitation to the public should meet with ready response.

SOUTH INDIA

PROBLEMS OF AGRICULTURE

(FROM OUR CORRESPONDENT)

Madras, 19.

Agriculture is winning a tighter grip on public interest. The reason is, of course, the growing feeling in the country that, if the cultivators do not agitate for certain measures of reform, the Government will not pay heed to the needs of the agriculturists and agriculture would continue in the future to be as unremunerative as it has unquestionably been during the years of the depression. There is a clear realisation that there are two sets of problems to be attended to without any further delay. There is on the one hand, the task of providing for the progress of Indian agriculture along the path chalked out by the more advanced countries of the world, and under this head would come the improvement in the technique of agricultural production and marketting. These measures are rather in the nature of progress along certain lines than the redressing of existing grievances. Though the public is by no means indifferent to such measures, it is engrossed at the moment with specific acts of the Administration which, according to the agricultural classes, tell heavily on them and which, justice demands, should be right before long. These two different sets of problems are being tackled at the same time ; and naturally in one sphere it is a matter of scientific enquiry, and, in the other, it is a matter of public agitation.

The week has seen significant instances of both In Coimbatore was held a conference of agricultural officers presided over by Dewan Bahadur Ramchandra Rao. The conference concerned itself mainly with the question of agricultural marketting. The leading students of economics in South India were ready with their papers on different aspects of this question of agricultural marketting. The interest of this conference was also heightened by the participation in its proceedings of Mr. S. V. Ramamurti, the Director of Agriculture. I have not yet come in possession of all the papers that were read in the conference. Doubtless, the authors have produced their studies after a first-hand acquaintance with the conditions of agriculture in this part of the country, and bringing to bear on their first-hand knowledge their capacity for scientific reasoning. Mr. Ramamurti observed—and this is no small compliment—that judging from the papers read at the conference, the problem of agricultual marketting had excited more interest amongst non-officials than among the officials of the Agricultural Department. Those who know Mr. Ramamurti would hardly feel surprised that a statement of this kind emanated from a high official of the Government. Mr. Ramamurti has little hesitation in admitting that the Agricultural Department is only in its infancy and that it would be sometime before it can function to much effect.

Dealing with the question of the co-ordination of the activities of the Irrigation and the Agricultural Departments, Mr. Ramamurti observed that the essential condition precedent to such co-operation is the capacity of the Agricultural Department to give definite guidance to the Irrigation Department in respect of the quantity of water required in the different areas. This, in turn, depends upon the thorough knowledge of the quality of the soil and other conditions regarding the various crops. It is only recently that the Agricultural Department has been endeavouring to acquire such equipment, and it is only after the Department has attained such knowledge that the co-ordination of the Irrigation and the Agricultural Departments can yield definite results. It is thus clear that the purely administrative changes are not matters of any great moment to the agricultural industry. One may think that in regard to the administrative reforms, the Government are apt to be slow. Mr. Ramamurti has done his best to disarm suspicion of this kind and has pointed out that the purely administrative side of such co-ordination is already well in progress, and that, if tangible results are not forthcoming, it is because of the time required for the Agricultural Department gaining in effective efficiency.

As regards the question of agricultural marketting, the President was in no mood to encourage high hopes. He was inclined rather to dwell on the main difficulties that lie in our path. He referred pertinently to the question whether under the new constitution with its safeguards, and with the elaborate rights which the autonomous provinces and the States would inherit, in a federal form of Government, it would at all be possible to initiate comprehensive schemes of reform. It is true that the co-operative movement, if sufficiently strengthened and expanded, might achieve much in the face of the restrictions imposed by the new constitution. But, the co-operative movement in India has been confined to one particular aspect of co-operation. The other sides have not been developed; and in regard to financing, no one appears to have even thought of the exact form which the finance required for marketting should take. The only hopeful feature in the present situation is the increasing interest evinced in these two problems.

While Coimbatore was thus engaged in exploring the measures required for the progress of technical efficiency in agriculture, Tanjore had another conference which was concerned with the distribution of the agricultural product, even as it is. Presiding at a Mirasdars' Conference, Mr. S. M. Mudaliar, a former Minister of the Madras Government, made out a conclusive case against the levies that are at present being made on the agriculturists. The whole point of his address was that with the levies as they are, the overwhelming majority of agriculturists in South India have very little left for them and their family to subsist on. He carries out an analysis of all those who pay land revenue into various classes on the basis of the amounts paid and lays bare the extremely penurious conditions in which the large part of agriculturists in South India have to live.

Mr. Mudaliar contends that such results were not contemplated, much less were they desired, by the authors of the Ryotwari Settlement. He contends that Sir Thomas Munro did not intend the periodical reassessment of revenue to be an instrument of rapacious absorption by Government of every available margin. On the other hand, Sir Thomas, according to Mr. Mudaliar, did intend that the ryots of South India should have as much security of income and increase in income as the tenants under the Permament Revenue Settlement in Bengal. If there is a difference, the difference ought to be only in the elimination of the gross injustices which have resulted from the Permanent Settlement. He did not know that the Government would swing to the other extreme and suck the ryots more remorselessly than even the usurers are doing. Much of the hardships to-day result from the Government failing to take a complete view of the various charges which the agriculturists are subjected to. There can be no doubt that the working of the Irrigation Department and the water rates which it levies have tended to increase the inroads into the agriculturist's income. In his address at the Shiyali Conference Mr. Mudalier pointed out that the Government have so far made a profit of Rs. 27 crores on works, and that this conclusively demonstrates that the rates charged and the measures of multiplying them cannot bear examination. The demand of the Mirasdars at Tanjore would seem to be that the Government should give effect to the recommendations of the Taxation Enquiry Committee, and that the water tax should be separated from the land assessment. They believe that if this is carried out, it will afford some relief to the ryots.

CAST IRON PIPES
CAST IRON PIPES wear one century, two centuries and longer. In fact, cast iron is universally recognised as the longest lived material known for underground mains. Its full span of life has never been measured !
CAST IRON PIPES made at the Kulti Iron-Works are manufactured to British Standard Specification. They are made from Indian raw material by Indian labour and the extensive, up-to-date foundries are designed for the production of every size and kind of pipe from 3 inch up to 48 inch diameter.
THE GOVERNMENT OF INDIA has specified Bengal Iron Pipes for its requirements for the current year and Water Works and Drainage Engineers will find that they can obtain all their needs from the same source.

Clive Street Gossip

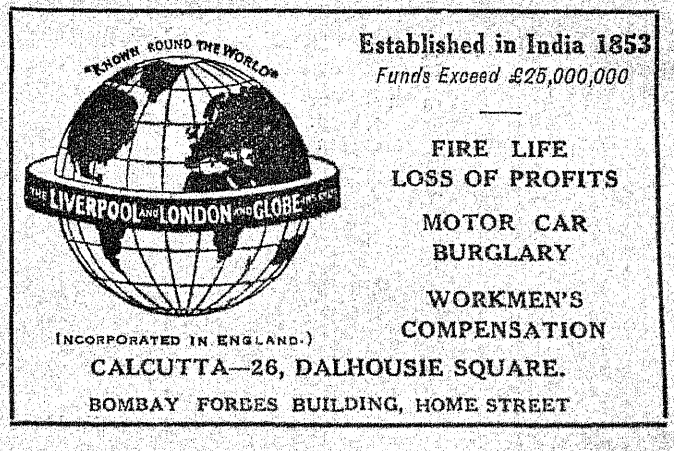
Christmas comes but once a year and when it comes it brings good cheer. So runs the old doggerel. "And a good job too, with regard to the first part of the saying," the pessimist croaks. And one may be quite sure that, to him, the second part thereof is untrue. For Scrooge still exists to-day, even though his creator, Charles Dickens, joined the great majority so many years ago. And that, by a natural mental process, leads one to the temptation to dilate on the Christmas as Dickens knew it and loved it and wrote of it. Let me avoid that temptation. The theme is somewhat threadbare and, what is more, I think I have already, at a previous Christmas time, had perhaps more than enough to say about it. To return to the pessimists, of whom I am not one and of whom I trust there are none among the readers of *Indian Finance*—if there be a state of mind that is more to be despised, more to be pitied and more reprehensible, I have yet to meet it. For, to use a colloquialism, what is the good of it ? The answer is, obviously, none. More. It is positively harmful. Pessimism is that state of mind which I recently saw most aptly described in one of those little stories which Mr. Raphael Tuck and his imitators delight to place in crackers at this, the most festive of seasons:—"Pessisimist who has just picked up a bundle of five rupee notes in the street ;—'Just my infernal bad luck ; not a single ten rupee note amongst the lot.' "

So let us leave pessimists and pessimism alone. We may not have had as good a year as we had hoped for ; the prospects for 1935 may not be as bright as we would wish them to be ; the report of the Joint Parliamentary Committee may be disappointing and disillusioning and the horse which we selected to win the Viceroy's Cup may have come in last, but—at least we are still alive, and, though perhaps not very energetically, still kicking. Consider the bright side of the picture and all we have to be thankful for. (This, by the way, is not intended to be a sermon, even though it may appear to be developing into one). Look around and see how many of one's neighbours are worse off than oneself. This may not be a very highly ethical performance but it is one that I know from personal experience has a most salutary effect on one's mental health if and when one is inclined to ruminate on the subject of the world being particularly hard and more particularly so in our own particular case. Let us, therefore, be cheerful and rejoice in the true Christmas spirit. And what a remarkable spirit that is. A Christian festival, it has yet made a place for itself in the hearts of almost every community throughout the world. And surely that is nothing but good.

Some years ago, when I was travelling from Poona to Bombay on December 25, a young Englishman entered my carriage at one of the intermediate stations. I greeted him with the time honoured salutation of the season, "A Merry Christmas and a Happy New Year," and held out my hand. He shook it warmly and returned my greetings, and then remarked, somewhat nervously and shyly, "I take it you are a Christian." "Not a bit of it," I replied, "but that is no reason why I should not wish you well on the day of your greatest festival." We had a long and intimate chat after that, and parted at Bombay with the greatest mutual goodwill, and I trust I am not unduly conceited when I say that I think that young Englishman had a very different idea of an Indian when he had when he entered it. And if so, that was due to Christmas.

There are those who say that in this degenerate age, Christmas is not what it used to be ; that the old idea of family reunions at this time of the year is dead ; that the real and genuine Christmas spirit no longer exists. To those who thus complain I would say that nothing is what it used to be ; times change and we change with them and, in general, the changes that times bring are in a progressive and not a retrogressive direction ; that family reunions are more sought and more found to-day than ever they were in the days of our fathers, albeit there are, alas, many in Clive Street and elsewhere in India who are, of necessity, separated from those near and dear to them and unable to join them ; and that, so far from the spirit of Christmas being absent, it is, every year, more and more in evidence. If Christmas has changed, as it has, it has changed for the better. No longer is it made the excuse for excessive eating and drinking. The present day cult of health has set the seal on that. Jollification there is, in abundance, but not to excess, and the jollification is largely of the health giving order. Racing may not afford exercise to the many and it may bring money to but the few, but it means fresh air to almost countless thousands and there really are, incredible though this may appear, some few who come away from a race course with more in their packets than they took with them. Polo, Cricket, Hockey ; visits to the zoo ; visits to friends—no deduction is to be made from the juxtaposition of these two kinds of visit ; dancing ; all of them Christmas festivities and all of them health giving. Perhaps one cannot say the same of the Cinema, but health is not the sole object to be sought at Christmas and one can at least say that so excellent are the great majority of the present day films that they act as an efficient mental stimulus.

In spite of the fact that the individual members of a family may be, and very often are, scattered to the four corners of the world, the vast strides made



in the matter of travel now enable them to cover the distance that separates them in a few hours or days, compared with the many days and months of what are often referred to as "the good old days." And if one cannot join one's relations, one can send them, at trifling cost, a telegram, cable, phone or wireless message of greeting. Could Pickwick have done that to Mrs. Bardell? There exists to-day a greater and a very growing desire to know and understand each other better—the true spirit of Christmas. Alas, it may be that the same cannot be said of some nations, *vis-a-vis* others, but in the case of individuals the statement admits of no two opinions and the same may with equal truth be said of most countries. But there is room for improvement ; vast room for vast improvement, and Christmas is the one time of all others when efforts towards that improvement are most likely to meet with success. Let us all combine to strive to make that effort ; commencing it now and making a New Year resolution to continue it throughout 1935. It is astonishing how little effort is required to attain success in this regard. A little sympathy here ; a kindly word there ; a genuine striving to grasp and understand the other man's viewpoint ; a little less of locking ourselves and our thoughts in watertight compartments, only to be opened to our own people ; a little more consideration for those less blessed with this world's good-fortune than ourselves ;—if those be our principles we need have no fear of how we shall be judged. We shall make the way easier for others and infinitely happier for ourselves.

With every good wish for a Merry Christmas and a bright and prosperous New Year, let me conclude with that two thousand years old maxim:—

Peace on Earth. Goodwill towards Men.

"STOP-GAP"

THE LIBERAL HAMLET.

The Famous Soliloquy Modernised and Moderatised.
By G.L.M.

To reject, or not to reject—that is the question:—
Whether it's wiser in the end to suffer
The checks and balances of an outrageous scheme
Or to take arms against a sea of safeguards
And by opposing end them? To refuse—to repel—
No more ; and by refusal to say we end
The heart-burning and the thousand natural shocks
That a Liberal is heir to—'tis a consummation
Devoutly to be wished. To refuse—to repel ;—
To repel! perchance to repent:—ay, there's the rub ;
For in that struggle of refusal what difficulties
may come,
When we have shuffled off this constitutional coil
Must give us pause ; there's the timidity
That makes calamity of so devoted life ;
For who would bear the whips and scorns of
bureaucrats,
The oppressor's wrong, the Die-Hard's contumely,
The pangs of despis'd loyalty, Federation's delay,
The insolence of India Office, and the spurns
That patient merit of the unworthy takes
When he himself might independence seek
With a bare body? Who would burdens bear
To build and work a wretched constitution
But that the dread of something after swaraj
That undiscover'd country, from whose bourne
No civilian returns—puzzles the will
And makes us rather bear those ills we have
Than fly to others that we know not of?
Thus moderation does make cowards of us all ;
And thus the native habit of passing resolutions
Is sicklied o'er with the pale cast of indecision ;
And enterprises of great pith and moment,
With this regard, their currents turn awry,
And lose the name of action.

(*Continued from page 1603*)

the Government draw from a foreign loan the people will be in the dark as to the extent to which the Government have had to part with their gold credits. And to that extent pessimism would be unrestrained. There is, as we learn from the Air Mail papers, also the circumstance that Monsieur Theunis is ill and that if his illness should continue Monsieur Franqui might slowly gain the upper hand in the Government. After all the majority in the Chamber in favor of the present party is very narrow. And any sign of strength for Monsiuer Franqui will cause this majority to dwindle. As regards France, the view is being generally entertained that the balancing of the budget with which the French Government are credited is, strictly speaking more or less a myth and that the final result will show a heavy dificit. The growing complications of European politics require that France should strengthen her armaments. Already the programme of development in the Air Forces has cost the Government a great deal. And it is more than probable that other sections of the national armaments would add to the heavy embarrassments of the Government. Who will doubt that if the choice is between the franc and the safety of the nation, France would not choose the latter?

OLYMPUS

(FROM OUR CORRESPONDENT)

New Delhi, December 18.

The nominations to the Reserve Bank Directorate must have caused some surprise in Bengal. I mention Bengal only because the list is otherwise considered very fair and reasonable, accommodating the various interests, territorial, communal, racial and commercial, that had to be counted with. Sir James Grigg has certainly been well advised on the subject and has chosen the team with skill and imagination.

* * *

The Indian commercial interests in Bengal were perhaps expecting to see the name of Mr. Nalini Ranjan Sarker in the list. He certainly had a very strong backing and the European opinion in Bengal was also friendly to him. But for reasons best known to the selectors he has been left out.

* * *

The Associated Chambers' meeting has come and gone. The Viceroy's speech belied my anticipation that it would make certain announcements. The reason may be that His Excellency has on second thoughts, reserved them for his address to the Assembly. Or it may be, that Sir James Grigg wishes his first budget speech to be full of "news" and the Viceroy has left him ample opportunities to do so. Perhaps there is another reason also for this lack of interest in the Viceregal utterance.

* * *

The Federation of Indian Chambers of Commerce is now a rival organization and it has always felt that the Government of India catered more to the Associated Chambers than to the Federation. This may have led to the Viceroy not using the Chamber's platform for any important announcements of policies and plans of the Government, for which the Assembly hereafter, will provide a proper forum.

* * *

A great deal of interest centres here round the forthcoming nominations, to the Assembly, of non-official Members. It seems the stoutest claim to get re-nominated has been put up by Mr. Sarma. At one time he showed preference for the Bengal Council and that argument was being used against his re-entry into the Assembly by those who would replace him by Mr. C. S. Ranga Iyer. I do not know how the fight will end ; but the story is current here that the Secretary of State has stated his preference in the matter and that that his opinion will decide the matter.

* * *

The Annual Review of Trade of India in 1933-34 is out. One amusing aspect of the review is that the consumers of liquor refuse to be the milch cow of the tax-gatherer. They are really a determined lot. When costs have gone up they have reduced consumption ; but the drink bill of India remains at 227 lakhs as against 226 lakhs in the previous year. Which means that most of those who drink have reached their maximum capacity in expenditure and have adjusted their consumption to keep pace with what they have hitherto spent : No other commodity shows such unique stability in the matter of values.

* * *

Another striking aspect of the Review is that the place of honour, so long held by yarn and textile fabrics, has been yielded to machinery (including millwork, hardware, cutlery implements and instruments and vehicles). All these were imported to the value of thirty-five crores, whereas yarn and textile fabrics were imported to the value of 26½ crores only.

* * *

The Ottawa Pact shows, in this Review, in a better perspective than ever before. United Kingdom's trade with India improved by over 9 crores. Germany and Italy find that the value of trade has been kept up at their expense in that they have lost a great part of their exports to India but have increased consumption of Indian goods. This fact is of great interest in view of the forthcoming discussions with the Italian Delegation in Delhi.

* * *

Italy's total trade with India is about 9 crores only. During 1933-34 her exports declined by 104, whereas India's export to Italy increased by 109 lakhs. Italy may very well claim, at the forthcoming negotiations, that India must give her more in return for Italy's increased consumption of Indian material. She may couple this with a threat that unless India makes such a gesture she may look elsewhere for that material. The question, however, will arise as to how far India can, without injuring the Ottawa spirit, do more for Italy. The discussions would undoubtedly prove most interesting, both diplomatically and commercially.

* *

That the Road Congress has begun to rouse interest in the Indian public, is shown by an interesting article this week by "An Observer" in *Roy's Weekly*, who suggests that the Congress will do well to exclude from its Membership firms interested in the increased supply of materials used for road construction and for the promotion of sale of vehicles and tyres. The writer seems to suggest that the excellent work, which the Congress can do, should not be marred by suspicion that its proceedings are dominated by interested parties and are not born of scientific argument. Perhaps there is a good deal in this suggestion and, I should think, that the firms concerned may take the suggestion in the spirit it is offered and reconsider their policy.

* * *

I hear that the question of the concession given recently to the Imperial Chemicals will be raised by the Congress Party in the Legislative Assembly. Strength has been added to this argument by the report of *The Leader* of Allahabad that, in the past, concessions made in a certain instance to an Indian Company were cancelled. The Government of India argued, through Mr. Raisman, that no Indian firm had offered to exploit these resources. The light now thrown on the subject puts a different complexion on the whole question. And when it is remembered that the concession is to last 50 years the argument for reconsideration of the whole question is, indeed, very strong.

* * *

The new Indo-British Trade Pact is still a secret document and no one can forecast its terms. The Government of India claims that they have negotiated the matter entirely in the interest of India, uninfluenced by the views of the Secretary of State whom they used only as a Post Office. And they further argue that the present constitution gives the Government absolute power in such matters and that they mean to use that power to commit the country to a Pact, which shall come into force sometime this winter. We will hear a lot of this also during the forthcoming session of the Assembly.

THE GATEWAY OF INDIA

(From Our Correspondent)

December 20.

Circumstances outside my control deprived me last week of the pleasure and my readers, I hope, of the profit of compressing current Bombay into two columns of print. A fortnight's perspective gives a truer sense of proportion and I resume my responsibility (does that read priggish) with the light-heartedness of the hard-boiled correspondent. With the season performing as it were a preliminery gallop before Christmas and New Year releasing the Big Events, Bombay has put on a holiday spirit which one senses in shop, street and office. For one thing, there is going to be a great invasion of foreign tourists who, from across the seas, hear India a-calling, what time rain and heat have given way to cool sea-breezes and snow-clad mountains and golden fields of waving corn. The Gateway receives them and never fails to thrill them. Few are coming by air ; by far the majority preferring the sea-route. The historic, scenic, social and religious atmosphere of India intrigues men and women who, stepping on to Ballard Pier, pass to an ancient land of which they have heard a lot and know a little. Their impressions are, of course, casual and most of the weird stories of Indian life circulated in Virginia, Boston and Washington, originate in a tourist's impressionist mind or eye. But they bring India increasingly in the orbit of a civilisation which is shaping India without disfiguring her.

The imminence of the nine hour day is causing a considerable flutter in industrial dove cotes. This new provision in the Factories Act, which comes into force on January 1, will increase the cost of production which, in these days of keen economic competition, is not a comforting prospect. Amidst much bemoaning and beating of the breast, our industrial magnates on the various Associations and manufacturing concerns are to meet shortly in Conference to devise ways and means to make the shorter day longer in the economic sense. How that is to be achieved is more than I can say ; the ways of millowners are mysterious. Shorter mill days will, however, react favourably, though temporarily, on the cotton position. Both Bombay and Ahmedabad are over-stocked. Looms have been working double shift on the security of protection to the industry, till prices hardly cover more than the cost of production and depreciation. There is a belated movement to restrict output in terms of potential demand. That introduces an All-India element and, it is, by no means, certain that other producing centres, not in the parlous position of Bombay and Ahmedabad, will fall in line with their views.

Our Corporation takes, be it accounted to its credit, the unemployment problem seriously. After much heart searching, our civic elders wrote officially to the Government suggesting a Conference of representatives of the Corporation and Government to devise a comprehensive relief scheme. Government, perhaps sensing the impact of concrete proposals involving expenditure, politely disclaimed the responsibility, stating that the affair was the Corporation's, but consenting to be represented on a non-committal basis. Our civic elders are not to be denied. They have represented to Government that the object of the proposed Conference is to ascertain what Government would do to co-operate with the Corporation to relieve distress. And in this representation they have cited the Whitley Commission report which throws on the State the onus of relief of the unemployed.

Supreme issues will evolve from the preliminary Conference of Ministers of Indian States convened by Sir Akbar Hydari, Finance Member of Hyderabad, which has just dispersed, to consider the Joint Parliamentary Committee's Report. Among those who participated in the Conference were Sir Akbar Hydari, Nawab Sir Liaqat Khan (Prime Minister of Patiala), Sir Manubhai Mehta (representing Bikaner), Sir Prabhashanker Pattani (representing Bhavnagar), Mr. Amarnath Atal (representing Jeypore). Sir Kailas Haksar (Gwalior), Rao Bahadur Surve (Kolhapur), Mr. G. Parameshwaran Pillai (Travancore), Mr. K. M. Panikar (Patiala), and Mr. Shuaeb Qureshi (Bhopal). The fate of the Federation rests on the decision of the Princes to join in or abstain from the Constitution framed by the Joint Parliamentary Committee. This has been emphasised in the cable to Sir Samuel Hoare from H. E. Lord Willingdon following a discreditable repudiation of the decencies of the personal Code in the House of Commons during the debate on the Joint Committee's Report. The Conference will reassemble in January to register the considered views of the Order of Princes.

The marine training of Indian cadets reached the stage of completion with the institution of a Marine Engineering Section in the training ship "Dufferin." This was the notable annoucement of Sir Joseph Bhore at the anual prize distribution to the cadets and it liquidates the undertaking of Government to make this final addition to training courses in the ship. The Indian Mercantile Marine has fulfilled initial aspirations and a new career is open to India's youth. There are great traditions in the marine no less than in the navy ; and India's large sea-borne trade offers a splendid scope for the development of those qualities which make up the unwritten code of the sea. At one time, not long ago, an Indian Marine Officer was considered impossible. To-day that prejudice has been swept away into the dust bin. Next month the annual number of cadets joining the "Dufferin" will be increased from 33 to 50, with the keenest competition for a place from 218 candidates. This year all passed-out cadets were absorbed. There are prospects of joining the Royal Indian Navy from the Mercantile Marine and in the opinion of Captain H. Digby-Beste, the Captain Superintendant of the "Dufferin," the training on that ship is a sound preparation for promotion to the higher cadre of the Navy.

The accommodation of patients living in the Indian style in St. George's hospital has a long and not too palatable history. More than a tang of racial acrimony pervaded the popular representation that a hospital, maintained at public expense, should not exclude Indians because of their manner of living. Other questions concerning the management of the Hospital were involved ; and Government appointed a Committee in March last to submit a report, which has been published. This Committee considered the reservation of one wing for orthodox Indians and, on considerations of capital and recurring expenditure, negatived the proposal, in which Government has acquiesced. It is officially emphasized that St. George's Hospital is open to persons of all nationalities and communities who follow European habits of diet and living. The service and equipment at St. George's Hospital are on a high level, and it is a legitimate inference that non-national, sartorial and culinary preferences qualify one for admission. The cost of an Indian wing is not prohibitive or even excessive, and the decision of Government cannot be supported even on the score of economy.

The bullion market has been recently the dumping ground of 50 to 60 bars of melted silver coin, each weighing 2,800 ounces and over, which were smuggled across the frontier despite the joint precautions of the Indian and the Afghan Governments. When about two months ago the price of silver rose, the aforesaid smuggler enhanced his economic investment in smuggled bullion, reaping a quick considerable harvest of profit. This sudden heavy influx of silver coins has swelled local stocks, widening the parity between the Bombay and the London rate.

OVERSEAS' NEWS: By Air Mail

GREAT BRITAIN

THE J. P. C. REPORT

The report of the Joint Parliamentary Committee is still the "front page splash"—to use a journalistic jargon—that it was on the day of publication. All manners of opinion are expressed regarding the proposed constitution from the grotesque and sinister threats of the Churchillites to the complacent platitudes of the 'National' members. One has a feeling, however, that the satisfaction of the sponsors of the proposals is more like that of a man who rubs his hands after making a good meal than that arising from the knowledge of a difficult task conscientiously and well performed. There is little doubt that an overwhelming majority will support the Treasury Benches and back the proposals during the coming debate on the Report. The faint voice of a Lansbury or a Seymour Cocks will be drowned in the babel the 'national' members will raise and one can visualise the provisions entering the Statute Book in a gallant procession at not a very distant future day.

Subsidy for Tramps:

While the Indian problem has overshadowed every other for the nonce, other important questions are also before the country. The proposed subsidy for tramp shipping is proving to be not a very simple affair. For the 'National' Government's generosity is not of the early Christian type of the left hand not knowing what the right hand giveth. They have hedged their offer with so many conditions and provisos that the tramp shippers feel that they are perhaps better off without the help. "It is not an attractive proposition to shipowners whose resources are exhausted to be told that, if they dispose of three serviceable steamers at a sacrifice and build a new one, they will receive part of the cost from a subsidy." The representatives of shipping who joined the debate that followed Mr. Runciman's announcement of the terms of the offer, pointed out the inequality of the offer which would benefit the owner of a derelict fleet more than that of an efficient one. The owners of cargo liners are also uneasy lest the subsidy should create a tramp competition against themselves. If, therefore, the offer of a constitution to India is like a sugar-coated quinine pill, the trampowners feel, that the offer of a subsidy for tramp shipping is like a bitterly coated sweet.

The Depressed Areas:

The Depressed Areas Bill is also before the House and the second reading of it was passed in due course. Mr. Oliver Stanley in moving the second reading indulged in a levity which was strangely inconsistent with the spirit of the motion. It is almost a characteristic of Englishmen that they fail to distinguish between a grave situation and a light one. In emulating the questionable bravery of Drake playing balls while the Spanish Armada hove in sight, they often fall into the ridiculous pose of Nero who fiddled while Rome burnt. One can only hope that such Christian tactics will not mark the coming debate on India.

The main point of Mr. Stanley's exposition was to emphasise the fact that the Depressed Areas scheme was *in addition* to Government's normal activities and its success would depend largely upon the energy and enthusiasm with which the Commissioners would initiate schemes of relief. It almost contains the damaging confession that the Government have failed in their duty in solving the problem of the Depressed Areas.

Britain and Autralia:

But apart from troubles at home Great Britain is also having troubles abroad. The pages of British history are full of the tales of the conflict between the policy of the home country and her dominions. The long struggle with America and the developments in Ireland are only two outstanding episodes. The latest recruit to the ranks of recalcitrant dominions is Australia.

Australia has always been full of goodwill towards the mother country which is hardly surprising considering that she is only a distant home of British citizens. She has always stretched a point or two in favour of Great Britain; and when the famous Ottawa Agreement was signed Australia helped materially in letting Great Britain reap the benefit. There have of course been occasions when Australia had to differ with Britain, for instance when Britain was about to enter into a trade war with Japan and again when Britain was ready to concede to the Japanese demand for a naval parity with America and England. But on the whole, Australia has suffered the home country to have the principal say in almost every matter.

But Australia after all is a nation by herself having her own social, political and economic problems and British Imperialism would do well not to take it for granted that Australia would always say 'yes' to all its proposals. In fact, she has definitely said 'no' to the recent proposal made by Great Britain that she desires to exercise her powers to further restrict the food trade of Australia and New Zealand in order to give accommodation to trade from Argentina, Chilli, Denmark, Holland and other food producing countries which are not within the Empire. Australia had already agreed to submit to certain restrictions on her food trade with Great Britain, in order to help the home country to increase her agricultural activities. But this recent request, which came almost in the form of a veiled command, is considered in Australia as a breach of faith. The distant Dominion has threatened to curtail her imports from England.

Great Britain, in fact, is in a dilemma. If she respects the interests of Australia as she should, the foreign countries would largely cut down their import of British goods owing to Britain failing to increase her food imports from these countries. But if Britain is to increase her imports from these foreign countries, she must draw further on the kindness of the dominions. There is also another reason why Britain wants to be on the right side of some of these foreign countries. A great deal of British capital is invested in ranches, ships, etc., to make profits out of these countries and a trade war with them would greatly diminish the returns of such capital. It is time the high priests of 'economic nationalism' saw that it can only lead to this impasse.

Carreras:

Carreras Ltd., the famous makers of "Black Cat" and "Craven A" cigarettes and tobaccos, have issued their statement of accounts for the year ended October 31, 1934. The profits are slightly lower at £804,942 and the vogue of coupon trading has cost the Company nearly £300,000 and the Company has decided to discontinue the policy of gift trading. The cost is to be met by an allocation of £47,905 from profits and the utilisation of the £250,000 development fund, enabling the item to be written off completely. The final dividend of 20 per cent. less tax on Ordinary, "A" Ordinary and "B" Ordinary shares is recommended, making the total

Air Mail Week.

dividend 35 per cent., less tax, for the year, which is the same as for each of the three previous years. A comparative statement of accounts is given below:

U. S. A.

UNEASINESS BEFORE BUDGET TIME

Although the influence of President Roosevelt to-day is as strong as ever, there has recently been in evidence some hesitation on the part of American business to accept the New Deal without demur. Especially in banking circles there is a certain resentment against administrative activities. The banks allege that the Government are trespassing into what should be their own special domain. An increasing number of Government lending agencies have, to a certain extent, usurped the field ordinarily reserved for the banks, and businessmen who sought accommodation previously from banks are relying now more upon these Government agencies. In view of this, it is rather unfortunate that the question of reorganisation of the banking system should come up at this juncture. Senator Fletcher of the Senate Banking Committee has sent out a questionnaire raising all sorts of problems such as Government ownership of the reserve system, Government ownership of all banks, stabilisation of currency, redemption in gold and the like. In fact, the questionnaire covers practically every conceivable banking problem known in the past. Senator Fletcher is not the author of this prodigious enquiry and the questionnaire has been inspired by the investigations made by the Treasury Department into the whole banking system of America. The nature of the replies will, no doubt, largely shape the banking policy of the Congress in the future.

In view of the arrest of the recovery, if not a positive decline, in some trades, the problem of making up the budget for the coming year is of an increasing difficulty. The work on the preliminary budget has already commenced and speculation is rife as to its nature. There is no doubt that the 1935 budget will reveal a tremendous deficit, for the cost of the New Deal has run into a mammoth figure, and whatever its merits, the money has to be found for such a costly experiment. The eternal source of fresh revenue, namely, taxation is practically barred, for taxation is considered so heavy already that the possibility of making further inroads into an American's income would be a dangerous policy.

The new Congress may differ a great deal among its members regarding federal policies, but there is little doubt that it will unite on one thing—the desire of large appropriations for constituents. Accordingly, the rank and file of the public views the Congressional session with no little anxiety. The business-man looks forward with unfeigned anxiety to the decisions that are likely to be reached with regard to the Budget and taxation.

It is hardly surprising that the question of stabilisation of currency, never far away, should be brought nearer at budget time. The difficulties of the so-called Gold Bloc have increased the necessity for going into this question more thoroughly. In certain circles the recent action of the Government in advancing 25 million dollars to the National Bank of Belgium against its stated policy of not lending to foreign countries, is considered a very hopeful gesture. It is construed to be a sign of a growing desire on the part of the N.R.A. to see a stabilised currency maintained; and it gave rise to many conjectures regarding the future course of the N.R.A. There is not very much ground, however, to support the opinion that the Government is seeking immediate stability, and one argument advanced by the authorities in justification for its inactivity in this regard is that the British Government is not disposed to come to terms. British non-official representatives in America point out that the British Government is not used to coming to terms with a Government whose budget is wholly unbalanced and which constantly threatens devaluation. It is a pity that the fiscal policy of a country should be based on such broad platitudes instead of on actual facts.

If, therefore, the Government's policy regarding stability is taken to be still as rigid as ever, the recent accommodation to Belgium must be considered as a sporadic occurrence having no particular bearing upon the general current of American policy. One should not, however, be too dogmatic on the subject and all judgments must necessarily be subject to the test of time.

The National City Bank of New York in its review of trade and industrial activity for the month of December is, however, genuinely optimistic. Retail sales are reported to be larger than a year ago and its conclusion is that the situation shows that the chief industries have passed through a resting period and entered the upturn or will soon do so. The prospects and expectations for the winter months are considered to be satisfactory and it argues that the pessimism which prevailed at the beginning of the season was unduly severe. The improvement in the retail trade is regarded as the result of the disbursements of the Federal Treasury for relief and other purposes; although it is only a small part in the purchasing power of the people it is sufficient to represent the difference between good and bad trade to a much truer extent than in the early stages. But it is obvious that purchasing power must be derived ultimately from the natural processes of production and exchange, and cannot indefinitely be supplied by an outside agency. It is also perhaps pertinent to enquire whether such reliefs do not tend to intensify the industrial indolence of a nation. But signs are not lacking that the same policy will be continued for the first quarter of 1935 and industrial production, on the whole, is well adjusted to the markets.

In view of the uncertainty and the hesitation prevalent in America regarding the New Deal, Sir Josiah Stamp's address at the Royal Institution on the Roosevelt Plan should help to clear the atmosphere. Sir Josiah said that in order to classify the New Deal and to understand the experiment that was being carried on in America, it was necessary to regard it under three main headings, rescue, recovery and reform. This was necessary in the case of all measures affecting money and prices, business and industry and finally those directly touching social life. He has made an attempt to make these tripartite classifications himself. The codes regulating competition and the provision for collective bargaining for hours and wages came under the heading of 'reform.' Under the first heading of 'rescue,' came the provisions for dealing with gold hoarding, special efforts to depress the value of the dollar, guarantees of bank deposits and assets and measures for foreign exhange, provision for special

Air Mail Week

farm loans and credits, the prevention of foreclosure on home loans, the operation of the Anti-Trust Laws, agreements for agricultural marketing, cuts in salaries and such other emergency measures taken by the Reconstruction Finance Corporation. Under 'recovery' came various measures for currency reform and the steps dealing with the value of the dollar, legislation for exports and the tariff and particularly public works projects. In Sir Josiah's opinion America has outlived the emergency stage and it is of the utmost importance that the relationship between the other two stages should be fully recognised. It is essential that recovery should precede reform for, unless that happens, a new and untried set of rules intended to reform past usages might easily hinder recovery. It is true that a large measure of reform is essential to the spirit of recovery and there must be a pledge that old abuses will never arise again. But above all, it is necessary that it should be palpable that the country has recovered completely before any complicaed scheme of reform can be successfully worked.

It is interesting in this connection to note that the President in a recent declaration has harped more or less on a similar theme. He said that in the midst of economic insecurity there can be no security for the individual and the first task is to get the economic system to function so that there will be greater general security. This should placate the section of people who are continuously clamouring for vast social welfare changes and will not be satisfied with a mere conservative unemployment insurance scheme. It must, however, be stressed in support of the President that, while considerations of the nation come first with him, he is also fully alive to the interests of the individual.

GERMANY

ACCELERATION OF DEBT GLEARING

The Anglo-German Exchange Agreement was instituted early in August as the most convenient medium for the liquidation of the outstanding trade debts due to Great Britain and the Special Account of the Bank of England went on accumulating Sondermarks. The inability of the British trading community to consume these Sondermarks has brought the Agreement to a practical nullity and this was evident when Germany declined to make further payments into the Special Account pending disposal of the amount already accumulated. The Payments Agreement was substituted, in certain aspects, in the first week of last month as a better method of expediting payment of the trade debts. Germany paid a sum of £400,000 towards the payment of outstanding debts after the revised agreement became operative and agreed to set apart 10 per cent. of the proceeds of her exports to the United Kingdom to meet trade claims. If the amounts so set apart do not suffice to meet the entire debts, the outstandings left over should be liquidated as a first charge on the 55 per cent. of foreign exchange received by the Reichsbank from German exports.

The importance of this understanding lies not in the immediate cash payment made, but in the spirit of conciliation between the debtors and creditors that is the keynote of the agreement. Considering the total volume of outstanding debts, cash payment will not even from a good fraction. In fact the unsold balance in the Special Account had increased to Rm. 14,100,000 on November 28 as compared with Rm. 5,100,000 on October 27. This advance is explained as mainly due to the gradual transfer of the amounts at private German banks awaiting transfer to the Special Account. Though the waiting accounts declined substantially, still they stood at Rm. 6,250,000 during this period as compared with Rm. 14,765,000 early last month. This advance in the Special Account is also attributable to the transfer of certain credits taking place by a mutual understanding between the central banks in order to avoid too long a waiting period for these creditors. Such special transfers have been made only during the last week of November. The total amount thus awaiting transfer both at the Special Accounts and waiting accounts has grown since Ocober 27 from Rm. 19,867,000 to Rm. 20,350,000, pointing by the way, to the poor sale of Sondermarks.

It is learnt that these transfers from the waiting accounts will be stopped shortly and with the liquidation of the debts incurred subsequent to the coming into force of the Payments Agreement, by means other than through the Special Accounts, there will only be the Sondermarks already accumulated to be dealt with. This should comparatively minimise the difficulties in the situation. But the slow rate of consumption of the Sondermarks—the demand of late for this currency has considerably lagged behind expectations—may necessitate the operation of clause 5 of the Agreement fixing the 55 per cent. limit. This would only result in a corresponding restriction of the devisen available for the payment of British exports to Germany and would therefore be done to the extent required by the British Government.

It would thus appear that a mobilisation of the outstanding claims is necessary at this juncture if the amounts outstanding at the Special Account are to be completely liquidated. This can only be done by a grant of credit facilities by Great Britain as payment by Germany is out of the question in view of the stringent devisen situation. Negotiations have been going on for sometime past with this in view between the Reichsbank and the Bank of England and according to the latest reports, it is understood that some agreement has at last been reached. It has been possible to arrange for a credit of £750,000 from the Bank of England to expedite payment of outstanding claims. This credit which has been negotiated under article 4 of the Payments Agreement will be redeemed in 12 monthly instalments. Though no details are as yet available as to the particulars of credit it is understood that it has been granted by discounting German trade claims on the United Kingdom. In addition to the £400,000 the original cash payment made by the Reichsbank on the signature of the Anglo-German Agreement and to the £750,000 from the present credit, another sum of approximately £250,000 is available from the 10 per cent. of the proceeds of German exports to the United Kingdom in November. Altogether there will thus be approximately £1,400,000 available for immediate payment for the liquidation of the outstanding German trade debts to the U. K.

As a result of these negotiations there has been in evidence an increase in the volume of trade. German purchases in England have increased substantially since the Payments Agreement became operative. The big problem is to what extent British purchases have revived. The official figures which will be published shortly will therefore be of immense interest.

There has been a certain amount of adverse comment in English Banking circles on this new credit to Germany. Much is made of the British Government's Parliamentary assurance that it was against any public policy to extend fresh credit to Germany, and this assistance is pointed out as violating this sacred pledge given to the nation. But such criticism comes only from those who cannot reconcile themselves to the changed situation in Germany and who would prefer to regard Germany as not only a defaulter but as one who has not any honest intention of ever repaying debts honourably contracted. They have probably failed to realise that the refusal of this facility would render the chances of liquidating the debts still remoter, whereas now there is at least the reasonable

prospect of a settlement at no distant date. Moreover where trade interests are concerned it is futile to rest on assurances given when conditions and circumstances were different. For one thing it cannot be denied that British exporters will be more willing than before to sell goods to Germany on credit because they find that the authorities are ready to take measures towards the liquidation of outstandings. This will thus prove to be of great assistance in furthering the commercial relations between the two countries.

New Banking Laws.

In accordance with the recommendations of the Banking Commission, the main outlines of which were detailed in these columns last week, the Cabinet has passed some of the important legislative enactments adopting the suggestions of the commission. The Law of Credit System, which forms by far the most important of the recent measures lifts the German banking system out of the sphere of private activity and establishes a State Office for the supervision of all credit institutions. By an amendment to the Capital Stocks Law cash dividend payments are limited to a maximum of 6 per cent. except in cases of companies which paid a higher rate of dividend last year and even in this case they are not allowed to pay more than 8 per cent. Amounts in excess of these dividends are to be handed over to the Golddiskontbank which will act as the general Trustees. These sums will be returned to the shareholders after a period of four years. Another law provides for the conversion of State, Municipal and Private Bonds yielding at present upto 7½ per cent. into bonds yielding only 4½ per cent. Among the securities likely to be affected by this new law will be mortgage deeds, Reich, State provincial and Municipal Loans but not Preference shares of the State Railways Company, the Loan Liquidation debt and other such bonds which come under the class of officially recognised "dividend unquoted" list. In addition to these changes there is another order promulgated by the Minister of Economics, according to which twelve German Stock Exchanges including Koenigsburg and Bremen will cease to exist as from December 31. In future there will only be nine exchanges at Berlin, Breslau, Hanover, Stuttgart, Munich, Hamburg, Leipzing, Dusseldorf and Frankfort. According to another decree the Chambers of Commerce and the Industry and the Chamber of Handicrafts are to be merged in a Central Chamber of Economy which will control all such industrial organizations and associations thoroughout Germany and will be composed of leaders from each organisations to be appointed by the Minister of Economics. All industrial organisations will be compelled to join this organisation thus putting all industries under the more direct control of the Reich Minister.

FRANCE

THE WHEAT BILL

The Wheat Bill, which is passed into law this week forms the first legislative enactment of M. Flandin's Cabinet in the economic field and will make interesting reading in view of the liberal policy that the new regime is expected to follow. The problem of wheat has always been the keenest and requiring the closest attention of the Government in France for some time past. The wide disparity in the internal and international price levels of commodities, that was a feature of French economic affairs, was nowhere else more marked than in vigorous application of the quota system and tariffs, the discrepancy in the internal price level of wheat as compared with foreign wheat has always persisted and has even tended to be more pronounced.

Next to the high cost of wheat internally the problem of disposing of the surplus quantity of the produce has been as pressing as it could be. The surplus is the result of three successive good crops due mainly to the weather. It is also to some extent due to the improved means of cultivation. One may suppose too, that the consumption of bread has declined with the development of the depression so that in the end the farmers, who account for half the population in France, have found themselves obliged to accept half as much for their wheat as they did in 1931, despite prohibition of imports, legal minimum prices, government facilities for stocking, denaturalising and incessant political agitation.

The New Wheat Bill is, therefore, well planned to meet the outstanding defects that have led to the present unsatisfactory state of affairs. The Bill is designed, firstly, to remove the existing surplus. secondly, to prevent future surpluses, and, thirdly, to abolish price fixing. The existing surplus, which is estimated at between 20,000,000 and 25,000,000 quintals, is to be disposed of by direct purchase for the constitution of emergency stock—probably 6,000,000 quintals—and by denaturalisation under the premium system—which will probably absorb about 4,000,000 quintals—whereas it is hoped to export between 5,000,000 and 10,000 quintals under bounty. The National Agricultural Credit Fund will be authorised to issue loans up to 1,500 million francs, the cost of which will be met by a milling surtax payable by the farmers. In order to restrict production farmers will be compelled not to sow wheat beyond the average sowings of the past three years; they will also have to make annual returns of winter and spring sowings and harvests. The Government is also empowered, if necessary to subject the sale of wheat to license for all farmers producing over 100 quintals.

There have also been some changes in the price levels. The present legal minimum price is 108 f. per quintal for 1934 wheat; this is to be reduced forthwith to 97 f. for the next three months and therefore price will be free, except for stocks officially notified for which the price of 97 f. will remain in force until July. The 1933 wheat stocks will cnntinue at the old price of 131 f. until they are cleared. The sale of wheat of inferior milling quality will be prohibited.

The outstanding pledge in the Declaration of the New French Ministry is to restore freedom to the wheat trade. In making that pledge, however, M. Flandin was careful to say that the market must first be relieved of its surplus. This was exactly the object of all the laws passed in the past two years—an object which they have so notoriously failed to achieve. There is this difference between the policies of the present and the preceding governments—whereas the latter sought to remove the surplus, in order to keep up the price of wheat and consequently of flour and bread, the former desires to see the prices fall first. It is, of course, impossible to predict what the reaction of the farmers will be to the new control scheme; but the promise of an eventual return to price freedom is generally commended. It should also be possible to achieve the promised end as France has been favoured with an export quota of 2,500,000 quintals, by the Budapest meeting of the International Wheat Committee. This is more than what was anticipated at 1,000,000 quintals and ; this increased export quota should help her in disposing of her surplus.

In fact this week's meeting of the Wheat Committee would have been an absolute failure from the point of view of the results achieved if not for this division of the quota. There is also another cheerful feature in the international wheat situation. The price level in the chief wheat producing countries has shown an upward tendency this week and though it is not easy to say if this rise will be steady, even this slight increase should comparatively help the French problem of lowering the internal price for this commodity.

JUTE AND JUTE GOODS

JUTE

Calcutta December 20.

The Jute market during the week under review fluctuated considerably under the influence of speculative operations in the Futures Market. The last week closed with a strong and rising tendency. In the beginning of the week a big speculator who is supposed to have inside information sold a very large quantity in Futures. His heavy sales brought down the market by about a rupee. It was rumoured that the Jute mill interests had submitted a representation to the Government of Bengal against any large reduction of the next crop. They were reported to have suggested a reduction of 10 to 15 per cent. Considerable "Bull" liquidation took place in the market as a result of which the tendency of the market is weak.

From enquiries, it appears, that as no definite decision regarding the percentage of restriction for the next crop has been arrived at, the matter will be discussed at a meeting of the Council sometime in the second week of January. It has been pointed out to the authorities that if a bigger reduction than what has been suggested by certain interests is aimed at, speculators will push up the market thereby making it impossible for the scheme of voluntary restriction to be a succes.

Demand from foreign covering interests was poor and is likely to remain so owing to the near approach of holidays. Mills, too, were not interested. Only small lots were done occasionally. Arrivals are slightly on the increase.

JUTE MANUFACTURES

Calcutta, December 20.

The Hessian market during the week under review fluctuated within the narrow range of two annas. Plate buyers who upto sometime back had been very active are reported to have withdrawn from the market. North America is reported to have taken a fair amount of interest specially for lightweight descriptions for near deliveries.

In the heavy goods section demand has been slack being confined chiefly to Cubans and E. bags. Both these qualities command a good premium for ready delivery. The tendency of the market is uncertain. Raw Jute seems to be the controlling factor at present in the manufactured goods market.

COTTON AND COTTON GOODS

COTTON

Calcutta, December 20.

No special feature is apparent in the movements of the raw material, the market having been quiet.

Now that the delivery period in respect of the Oomra and Bengal December-January, 1935, contracts has commenced, the quantity of actual cotton to be tendered in the immediate future against the previous sales of these contracts will be an index of either a short or a belated crop. The situation in respect of Oomra does not seem favourable; for, whereas since December 1, 1934, to date 9,400 bales were tendered for Bengal delivery, not a single bale has been tendered so far against the Oomra contracts.

Figures given in the third memorandum for the season 1934-35 on Cotton crops in the Presidency and Indian States, excluding Sind, show a lower out-turn than last year. According to the estimates upto December, 1934, the total area of late varieties of cotton is: British Districts 3,353,000 acres; Indian States 2,241,000 acres; and total 5,594,000 acres. The total estimated out-turn of Bombay Presidency proper is: British Districts 6,33,000 bales; Indian States 4,63,000 and total 1,096,000 bales. So far as the British Districts are concerned, this out-turn means a decrease of 14.4 and 13.8 per cents. respectively.

The United States Bureau report, under date December 1, shows production as follows:—

		As on		Final	
		Dec. 1 1934	Nov. 1 1934	1933	1932

The Chinese Cotton Statistics Association (Shanghai) issued its second estimate on Chinese cotton production for the 1934 season on November 15. The estimates indicate an acreage of 44,807,579 mow (6.586 mow=1 acre) and a crop of 11,172,553 piculs (1 picul=133 lbs.) which compare with 40,454,000 mow and 9,794,000 piculs, the final estimate for the previous season.

Total production in Brazil, including both the Western and Southern States, during 1933-34 has been estimated by the Brazilian Government at 969,000 bales compared with 448,000 bales during 1932-33.

The yarn section of the Pocup market has put through a number of small sales in 22's, 28's and 40's grey counts of Indian mills, prices continuing firm with a slight appreciation.

COTTON PIECEGOODS

Calcutta, December 20.

The market remains quiet and steady, with a slight upward tendency in retail business, which is confined to the finer qualities of light white goods and fancy styles. Dhooties and standard greys which are in demand at this season are neglected to the disappointment of wholesale dealers who looked forward to substantial sales with the approach of the **Id** festival.

Clearances of winter styles are on a small scale, with a corresponding decline in prices, as merchants are averse to carry over stocks of heavy goods from this season to the next.

The forward position shows no activity of importance, small lots, chiefly of white lights and prints and printed sarries, have been mentioned, though actual bookings are negligible.

The quota allotment for Japanese piecegoods for the six months, April 1 to September 30, was fixed at 200,000 yards, imports having been as follows:—

	Yards	Quota Allowance Yards.
Grey Goods (Paint and Bordered) ...	70,669,999	116,000,000
Bleached	12,315,000	16,000,000
Coloured	62,358,000	68,000,000
Total ...	145,342,000	200,000,000

Total exports of cotton textiles from Japan during the calendar year 1934, are expected to exceed 2,400,000,000 square yards which will earn for Japan a leading place in world exports. In 1933, the total textile exports from Japan amounted to 2,090,000,000 square yards as against total exports of 2,031,000,000 square yards from Lancashire. Present indications are that the margin between Japanese and British textile exports during 1934 would widen to over 400,000 square yards in favour of Japan.

BULLION

GOLD

Calcutta, December 20.

Quiet conditions have prevailed in the local market with few fluctuations. London prices are slightly firmer at £7-0-9¾ and the local market is practically steady at Rs. 34-14-3. The London New York Cross Rate is practically unchanged at 4.94 5/16 and the London-Paris Cross rate is 7.84. Daily arrivals in Bombay and Calcutta are 10,000 tolas and 3,000 tolas respectively. The stock at Bombay is estimated at 5 lakhs tolas and that at Calcutta at ½ lakh tolas.

LONDON—Air Mail Week.

The Bank of England gold reserve against notes amounted to £192,113,083 on the 28th ultimo, showing no change as compared with the previous Wednesday.

During the week the Bank of England reported purchases of bar gold to the total of £69,722.

Business in the open market has been on a smaller scale, the amount offered during the week being approximately £800,000. The weaker tendency of steling in terms of the dollar has been reflected in the higher prices, and about £1,000,000 of gold has been shipped to New York.

SILVER

Calcutta, December, 20

There has been a precipitous drop in the local silver maket during the week under review, the prices coming down to Rs. 64-10-0. This is the result of the rumour that reduction in the import duty is being contemplated in the next budget. There is, however, to counterbalance this, a rumour that the Indian States are contemplating an import duty on silver. The tone of the market as the result of all this is naturally nervous.

London Air Mail week:

The market has remained very steady and during the past week prices showed a variation of only 1/8d.

The Indian Bazaars and speculators continued to give support and buying for America followed the weaker tendency of sterling. China sales were again in evidence and with a few speculative resales, offerings were sufficient to cope with the moderate demand.

Although at the moment buying is not being pressed, there are yet indications of a film undertone.

The following were the United Kingdom imports and exports of silver registered from mid-day on the 26th November to mid-day on the 3rd December :—

Imports.

SUGAR

Calcutta, December 20.

There was hardly any activity in the local market which holds small stocks. The forward position has been stimulated by firmer advice from Cawnpore, where prices have advanced by 4 annas per maund. It is estimated that Indian Mills sold about 1,50,000 bags of first quality for December-April despatched on the basis of Rs. 7-11 to Rs. 7-15 per maund f.o.r.

Karachi reports quiet conditions with a decline of ½d. in ready Java and 2d. in forward positions owing to poor demand for ready and lack of buying interest in forward positions.

Imports in British India from January to October, 1934, 1933 and 1932 are:—

		Tons.
1934 (Jan.-Oct.)	...	188,000 (143,000 Java: 45,000 others)
1933	...	253,000
1932	...	348,000

Stocks in M.B. Indian Ports on November 30, 1934, were estimated at 14,852 tons against 8,526 tons on the same date last year.

TEA

Calcutta, December 20.

Sale No. 27 was held on December 17 and 18 when 30,122 packages of tea leaf with Export rights, and 6,132 packages of tea leaf and 8,636 packages of tea dust both for internal consumption were sold at an average of annas 8-7, 5-5 and 5-0 per lb. respectively.

In spite of the weak tendency prevailing in London there was quite a fair demand for teas with Exports Rights. The tendency, however, was for an easier market. Both leaf and brokens were easier by 3 to 6 pies per lb. Orange pekoes and pekoes are showing the usual decline.

All types of teas for Internal Consumption had a strong competition prices showing a rising tendency.

The following are the full particulars of Sale No. 27.

Tea with Export Rights.

	1934	1933
Offered	30,122	20,326
Sold	26,461	19,894
Average	0-8-7	0-10-4

London

At the London auctions on December 13, 5,500 packages of Java and other teas (including Sumatra) were submitted for sale.

There was a good competition but prices were irregular and poorer. Tippy teas were easier but better kinds well maintained their rates.

The following were the lowest prices fetched during the day's auction:—

Common Pekoe last auction 9d., to-day's auction 8¾d. lb.; Common Broken Pekoe last auction 8¾d., to-day's auction 8½d. lb.; Common Orange Pekoe last auction 9½d., to-day's auction 9½d. lb.; Common Broken Orange Pekoe last auction 8¾d., to-day's auction 8d. lb.; Common Broken Pekoe Souchong last auction 9¼d., to-day's auction 9¼d. lb.

The following were the value prices:—

Clean Common Pekoe last auction 9½d., to-day's auction 9¼d. lb.; Clean Common Broken Pekoe last auction 9⅛d., to-day's auction 9d. lb.; Clean Common Orange Pekoe last auction 11½d., to-day's auction 11d. lb.; Clean Common Broken Orange Pekoe last auction 9⅜d., to-day's auction 9¼d. lb. Clean Common Broken Pekeo Souchong last auction 9¾d., to-day's auction 9½d. lb.

Tea Average

The following were the average prices of tea in the London market during the week:—

Indian Tea (Northern) last week 11.72d., this week 11.35d. lb.; do. (Southern) last week 11.53d., this week 12.82d. lb.; Java Tea last week 10.19d., this week 10.18d. lb.; Sumatra Tea last week 9.53d., this week 9.33d. lb.

Calcutta Tea Sales

Owing to the Xmas holidays there will be no further Sales until the week commencing January 7.

U. K. Tea Imports

Imports of tea of all kinds into the United Kingdom during the month of November last, compared with the previous month and with November, 1933, were as follows:—

	Nov. 1933 lbs.	Oct. 1934 lbs.	Nov. 1934 lbs.
From British East Indies (except Ceylon) ...	35,641,000	49,262,000	30,852,000
From Ceylon ...	9,136,000	10,881,000	7,793,000
From China (including Hongkong and Macao)	823,000	4,708,000	2,749,000
From other countries ...	4,317,000	3,750,000	3,954,000
Total amount in stock		258,560,000	279,581,000

Exports from Northern India from 1st April, 1934 to 8th December, 1934.

MISCELLANEOUS

WHEAT

Calcutta, Dec. 20.

The market has suffered a check to the recent marked advance in prices, though buyers are plentiful at rates that have not appreciably depreciated.

The situation in the Punjab, where the weather remains cloudy without rain, is uncertain. Beta operators are watching the position closely in view of the consumers demand being partially diverted from wheat.

Karachi stocks remain heavy with small prospects of clearances as shipments to Calcutta and Bombay have ceased.

Wheat prices outside India, under pressure of heavy shipments, have eased. Crop reports from Argentine and Australia have led to easier offerings. Manitoba sellers are operating with reserve in view of predictions of a short United States outturn.

STATISTICAL INFORMATION

FACTORIES

Figures for 1933-34

During 1933 the registered number of factories rose from 9431 to 9558. The number actually working was 8452 are increase or 211 over the previous year's figure.

The number of sugar factories in British India increased from 166 in 1932 to 213 in 1933.

The average number of operatives employed was 1,403,212 or 16,499 less than in 1932. No returns were, however, submitted by five Bombay mills which closed towards the end of the year and if the 10,767 operatives employed by these mills are taken into account, the actual decrease is small.

The number of operatives employed in jute mills fell from 263,442 to 257,157. The number of operatives employed in the cotton textile industry from 397,358 to 362,027 the decrease of 35,331 being mainly in Bombay and the Central Provinces. The expansion of new factories, principally sugar factories, gave employment to over 15,000 additional workers.

The number of women and children employed decreased from 225,632 and 21,783 in 1932 to 216,837 and 19,091 in 1933. The percentage of women and children to the total factory population was 15.4 and 1.4 respectively as against 15.9 and 1.5 in 1932. The steady decrease in the employment of children continued in all provinces and in the Bengal Jute Mills the number employed was only 1,134 against 1,515 in the preceding year and 26,474 in 1925.

MYSORE INCOME-TAX

The administration report of the Mysore Income-Tax Department for the year 1933-34 shows a marked increase in revenue.

The total demand, including the opening balance under income-tax amounted to Rs. 16,21,374 against Rs. 11,67,377 in 1932-33. Under supertax the total demand was Rs. 6,13,876 as against Rs. 3,07,764 in the previous year.

This marked increase is due to the increase in the profits of the mining and mineral companies in the State.

The net demand under income-tax in 1933-34 was Rs. 14,12,950 as against Rs. 10,13,868 last year. The collections amounted to Rs. 13,63,780 as against Rs. 9,58,817 in 1932-33. The net demand under super-tax was Rs. 6,10,320 as against Rs. 3,01,628 in 1932-33.

GOLD EXPORTS

Bar gold valued at Rs. 2,56,21,362 was exported from Bombay to Europe and America during the week ended Dec. 15, large quantities of which are being shipped to London, with the option of New York, Paris and Amsterdam.

The total value of gold exported since England went off the gold standard now amounts to Rs. 2,09,37,00,607. —*Associated Press.*

CASH CERTIFICATES

During November, 1934, Rs. 95,94,000 (approximately) were realized by sale of five-year Post Office Cash Certificates against Rs. 1,13,10,000 in November, 1933 and Rs. 1,31,52,000 in November, 1932.

RAILWAY TRAFFIC

Latest Earnings and Working Expenses

The total approximate gross earnings of all Stateowned railway for the week ending 1st December, 1934 (35th week), amount to Rs. 171 lakhs, Rs. 2 lakhs LESS than the figures for the preceding week and Rs. 1 lakh LESS than the actuals for the corresponding week of the previous year and Rs. 5 lakhs MORE than the actuals for the corresponding week of 1932-33.

The total approximate gross earnings and working expenses from 1st April to 1st December, 1934, amount to Rs. 57.53 crores or Rs. 268 lakhs MORE than the actuals for the corresponding period of the previous year and Rs. 378 lakhs MORE than the actuals for the corresponding period of 1932-33.

The following are the up-to-date approximate gross earnings of the State-owned railways from 1st April, 1934, as compared with the actuals of the corresponding period of last year :—

Railways.	Earnings. Up to 1-12-33 (in lakhs) Rs.	Earnings. Up to 1-12-34 (in lakhs) Rs.	Working Expenses* Up to 31-10-33 (in lakhs) Rs.	Working Expenses* Up to 31-10-34 (in lakhs) Rs.

*Including suspense but excluding appropriation to and from depreciation fund.

A comparison with the figures of the previous week for the principal State-owned railways shows decreases in the approximate gross earnings of all railways except the A. B., B. B. & C. I., G. I. P., M. & S. M. and N. W. A comparison with the actuals of the corresponding week of 1933 shows decreases in the approximate gross earnings of all the principal State-owned railways except the A. B., B. N., B. B. & C. I., E. B., E. I., and N. W.

Wagon Loadings

Comparisons of figures of wagon loadings on Class I Railways for the week ending 1st December, 1934, and for the cumulative period from 1st April to December, 1934, with the corresponding periods of the previous year are as follows :—

During the week ending 1st December, 1934, there were loaded on the broad gauge 84,099 wagons, being 5,990 MORE than in the corresponding week of the previous year, or an increase of 7.67 per cent. On the metre gauge there were loaded 47,940 wagons, being 2,151 FEWER than in the corresponding week of the previous year or a decrease of 4.29 per cent.

For the period from 1st April to 1st December, 1934, there were loaded from 1st April gauge 2,649,581 wagons, being 159,370 MORE than in the corresponding period of the previous year, or an increase of 6.40 per cent., and on the metre gauge 1,638,519 wagons, being 66,025 MORE than in the corresponding period of the previous year, or an increase of 4.20 per cent.

Investor's Supplement

Vol. XIV. No. 26 SATURDAY, DECEMBER 22, 1934 Price Re. 1

NEW INDIA ASSURANCE

SHARES DEFINITELY UNDERVALUED

[The following is a Note prepared by Mr. C. S. Rangaswami for a London firm of stock-brokers who are fostering and cultivating the interest of British investors in Indian investments and of Indian investors in British investments. We publish it in this Supplement as it has value for the readers of this section.]

The New India Assurance Company is the largest Indian composite insurance office, started under powerful auspices, controlled by an illustrious board of directors, run by an expert and efficient staff, assured of influential local connections and of favourable foreign treaty arrangements, and able to claim splendid achievements in the past and to hope for still better and more rapid progress in the future.

The paid-up capital of the Company is Rs. 71.21 lakhs or nearly £500,000. The capital plan, from the point of view of business possibilities in India, is adequate. In this regard, the New India holds a premier position.

Till three years ago, the Company was doing all kinds of general insurance business, but not life.

The financial and reserve policy of the Company has conformed to the highest traditions of British insurance officers. Year after year, appropriations from current revenue have been made to "Additional Reserves"—that is, additional to the 40 per cent. reserve usually provided for unexpired risks. The result is that at the end of 12 years' working, the Fire Fund equals 98.5 per cent. of the premium income ; Marine Fund equals 128.1 per cent. ; and Accident Fund equals 95.3 per cent. These are reserve proportions which can compare favourably with leading insurance offices of Britain.

The financial policy has been no less satisfactory. Investments are marked by "Safety First" regard. The entire portfolio consists of giltedged. No outlay has been made on buildings, or second-grade bonds or stocks. The capital appreciation of securities over book value is anything like 15 per cent. The Inner Reserves thus created are over £150,000.

Despite so large an increase in the market value of investments, the Company has maintained, intact, the Investment Reserve Fund of Rs. 5.92 lakhs or £45,000—a Fund which was created in days when giltedged suffered heavy depreciation.

The real significance of the Inner Reserves and the Investment Reserve Fund is that the Company is assured, for at least another decade, of a return of 5 per cent. tax free on a considerable proportion of investments. This fact derives special value from the present tenour of giltedged yields which are, in India, in the vicinity of 3¼ per cent. subject to tax.

The Life business, which was started early this decade, has made phenomenal progress ; and the new business written in the third year was over £800,000 —a record which is, perhaps, unique.

The Life Fund is growing at the rate of Rs. 7 lakhs per year (that is, £50,000). Year after year, the rate of growth will have increased momentum.

It is this factor which must play an increasingly important part in the future dividend policy of the Company. The contribution by the Life Department to the earnings of the Company has hardly begun. In a few years' time, this should be the most dominant factor.

The dividend declared for the last financial year (April to March) was Re. 1-3as. per share of Rs. 15 paid-up. The Company was in a position to pay Rs. 2 this year. But the Additional Reserves and some other Reserves were strengthened even far more than the requirements. That the dividends in the coming years must show steady and even rapid rise, may be taken as certain—the more emphatically so after the Life Section makes its full quota of contribution.

The present price of the Rs. 15 paid-up share is Rs. 37. The dividend of Re. 1-3 on the share quoting Rs. 37 gives a tax-free yield of 3⅓ per cent.

An yield of this size on a first-class Insurance Company's share with assured prospect of steady increase must be deemed quite attractive.

From the progress in the market value of shares of Indian Insurance Companies over the past decade, there is every reason that, over the next quinquenium, the New India shares may be easily double or treble their present value. The Oriental Life Insurance Company has its Rs. 200 shares quoted at Rs. 3,860 ; the Empire of India's share is Rs. 175 paid-up and is now quoting Rs. 2,505. These two concerns do only life business. The Triton (Rs. 25 paid-up) is priced Rs. 230 on the Stock Exchange. This is a general insurance company but does not do life.

The New India is, in the writer's opinion, most favourably situated by virtue of its comprehensive business activity, its loyalty to the soundest canons of insurance, and its extensive and valuable connections, both at home and abroad.

The New India shares are a most promising "buy" at their current rates. They are definitely undervalued.

THE WEEK IN THE EXCHANGES

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, December 20.

Normal business was reported in the Stock Exchange during the period under review. Government Securities remained quietly steady during the early part of the session but towards the close dull conditions have obtained. Jute Mills' shares have experienced some setback during the opening session but as the session advanced more buying power developed and the market at the time of writing was again strong. Cottons continued dull and uninteresting. Coals were again easier after their recent spurt and only a limited business was put through. Among Miscellaneous Industrials, active conditions continued in Electric Power Supply companies' shares and also among certain Engineering issues. Sugars, on the other hand, remained dull and uninteresting. Teas were very quite, although the undertone remained healthy.

Government Securities.—This section opened quiet but steady, with 3½ per cent. Government Paper at Rs. 97/2. As the session progressed further weakness has developed and the price of Government Paper sagged to Rs. 96-10 at one time on Wednesday; since then there has been some rally and at the time of writing—'Paper' is quoting at Rs. 97. Other long-dated terminables were also easier in sympathy. 3½ per cent. Loan 1947-50 are now quoted at Rs. 102-12; 4 per cent. 1960-70 at Rs. 110-10 and 5 per cent. Loan 1945-55 at Rs. 119-2. There was not much change in Medium and short-dated loans. The Bank rate remained unchanged at 3½ per cent.

Fixed Interest bearing Securities.—Jute Mills and other sound Industrial Preference shares continued to receive support as usual, and a fairly good turnover resulted. Burn & Co., 7 per cent. Pref. changed hands upto Rs. 133 B. I. Corporation 8 per cent. Pref. advanced further to Rs. 151 and Kumardhubi Engineering 7 per cent Pref. to Rs. 83. Dunlop Rubber Preference was marked at Rs. 120 and Indo Burma Petroleum Preference at Rs. 114. Titaghur Paper Preference accounted for a deal at Rs. 160 ex-dividend.

Only a limited trade was passed in Debentures. Bengal Paper 6 per cent. issues changed hands at Rs. 104-8; 7 per cent. Calcutta Jute recorded a deal at Rs. 111 and 6 per cent. Dunbar Cotton Mills was mentioned at Rs 102-4. No business was reported in Calcutta Port Trust and Municipal issues upto the time of writing.

Other Investment Stocks.—Imperial Bank's Fully paid up issues remained steady at Rs. 1,600 and Contributories at Rs. 403. Central Bank's shares changed hands at Rs. 35-4. Only a solitary deal in Mymensingh Bhairab Bazar (rebate) at Rs. 91 was reported in Light Railways section although the demand for Government Guaranteed issues continued as usual. Among other Transport companies Calcutta Trams (ordy.) changed hands at Rs. 20-4. Bengal Assam Steamships (ordy.) at Rs. 220 and India General Navigation and Railways (ordy.) at Rs. 220-8.

Among Insurance Companies, Concord of India kept steady at Rs. 12-12 prem.

Cottons.—Dull conditions have obtained in cotton shares and only a limited business was put through. Bengal Nagpur (ordy.) registered a deal at Rs. 19; Elgin Mills changed hands at Rs. 142; Kesoram Ordinary at Rs. 4-15; and New Ring (ordy.) at Rs. 92.

Coals.—The better feeling, which was in evidence in this section during the last week, has not been maintained and sellers again predominated. As a result, prices sagged considerably. Bengal are now quoted at Rs. 240; Equitable (ordy.) came down to Rs. 30. Hurr-alidih was marked at Rs. 11; Burrakur (ordy.) at Rs. 13-4; New Beerbhum (ordy.) at Rs. 13-12 and Raneegunge at Rs. 33. Amalgamated kept barely steady at Rs. 23; New Manbhum was slightly easier at Rs. 59; Sendra was marked down to Rs. 12-12 and Standard to Rs. 25.

Among lower-priced stocks, Bhalgora was quoted at Rs. 3-3, Burradhemo at Rs. 4-14, South Karanpur at Rs. 5 and Talcher at Rs. 2-2.

Jutes.—In sympathy with better commodity markets, Jute mills' shares opened strong on Monday and again a very brisk trade was reported. As the sessions progressed some set-back was, however, in evidence owing to liquidation by many holders. At the time of writing the market is again strong. Howrahs after changing hands upto Rs. 62-2 on Monday, gave way to Rs. 61-6 at one time on Tuesday and since then the market again rallied and the rate improved to Rs. 62-5 at one time on Wednesday. The price at the time of writing is Rs. 62. Kamarhattys fluctuated between Rs. 651 and Rs. 644.

Among Rs. 10 stocks, Clives are now quoted at Rs. 35-6, Birlas at Rs. 16-8, Hukumchands at Rs. 17-6, Nationals at Rs. 26-8, Northbrooks at Rs. 54 and Reliances at Rs. 81-8. Among low priced stocks, Craig and Waverly changed hands at Rs. 2-3 and Rs. 3 respectively.

Among bigger denominations, Inchcape groups are still popular. Gourepore was marked at Rs. 725; India upto Rs. 432. Megna again improved to Rs. 53-8 and Nuddea to Rs. 76. Amongst others, Anglo-India was very popular and a large business was reported upto Rs. 495; Bally was marked upto Rs. 232; Barnagore to Rs. 194; Budge Budge to Rs. 381; Champadany to Rs. 210; Fort William to Rs. 335; Fort Gloster at Rs. 384; Kanknarrah at Rs. 578 and New Centrals at Rs. 426. In comparison with other shares, the shares of Bird and Heilgers group appear very cheap at the present moment and some capital appreciation is expected in the shares of these group, specially in Auckland, Lansdowne, Dalhousie, Lawrence, Kinnison and Naihati.

Electricals.—A fairly large trade was reported in Electric Power supply companies' shares and prices in the majority of instances hardened again. Agras are now quoted at Rs. 128, Benares at Rs. 14-6, Cuttack at Rs. 8-2, Jubbulpore at Rs. 13-4, Muttra at Rs. 11-6, Mozaffarpore at Rs. 8-14, Shahjahanpore at Rs. 7-8 and Upper Jumna Valley at Rs. 11-8.

Engineering.—Engineering companies shares were again popular. Arthur Butler kept steady at Rs. 15-8, Burn & Co. (ordy.) again advanced to Rs. 320 and Indian Standard Wagon (ordy.) to Rs. 71. Indian Galvanizing remained steady at Rs. 10-4 and Saran Engineering at Rs. 11-12. Marshalls met with a strong demand on the rumours of its capital reduction and changed hands at Rs. 2. Kumardhubi Engineering (ordy.) also kept steady at Rs. 3-8; Indian Iron and Steel (ordy.) and Bengal Iron, however, kept steady on the decline at Rs. 7-14 and Rs. 4 respectively.

Sugar.—The interest has disappeared and prices remained barely steady. Balarampur was quoted at Rs. 18-12. Carew & Co. changed hands at Rs. 21, Champuran at Rs. 22 and Cawnpore (ordy.) at Rs. 35. Samastipore accounted for a deal at Rs. 11.

Miscellaneous.—In this section, B. I. Corporation (ordy.) kept steady at Rs. 2-12. Brittania Biscuit at Rs. 8; Indian Wood Products at Rs. 36-4 and Ganges Rope at Rs. 305. Howrah Oils kept steady at Rs. 12-12 and Midnapore Zemindary (ordy.) at Rs. 76; Burma Corporation, on the other hand was easier at Rs. 7-10 on Lower London advices.

Teas.—Owing to rather unsatisfactory prices realised in London and local tea sales, tea share market was somewhat erratic. The undertone remained quiet healthy and optimistic and better prices are expected in early next year, when an Agreement with Russia is expected to be arrived at.

N. B.—The Rooms of the Calcutta Stock Exchange Association, Ltd., will remain entirely closed from Saturday, the 22nd December 1934 to Tuesday, the 1st January 1935, both days inclusive on account of the X'mas and New Year Holidays.

MADRAS STOCK EXCHANGE

(*By Wire*)

(From Our Correspondent)

Madras, December 20.

Government Securities.—The securities market was erratic especially in paper which at one time dropped to Rs. 96-11, subsequently improved to Rs. 97-8, later reacting to Rs. 97 and closing dull at Rs. 97-1. The approach of the Christmas and New Holidays led to considerable liquidation; 4 per cent. 1960-70 loan also came down in sympathy, closing steady at Rs. 111-2. There was not much enquiry for other securities.

Fixed Interest Securities.—There was no business of note either in Port Trust, Municipal or Joint Stock Company debentures. Amongst preference shares, there was a keen demand for Buckingham Carnatics, Deccan sugar and Spencers issues. Vasanta mills were done at Rs. 105-8 and Cochin Malabar preferences at Rs. 31.

Banks.—Imperial Banks were an uncertain market. The fully paids at one time touched Rs. 1,640 and the Contributories Rs. 417-8 closing definitely lower at Rs. 1,610 and Rs. 405 respectively. Other bank shares showed no change except several deals in Indo-Commercial Banks at the unaltered price of Rs. 85 cum dividends and rights.

Public Utilities.—The demand for Public Utilities was fair but in the absence of sellers, business was hampered. Vellore Electrics were done at Rs. 13-4 whilst West Coast Electrics were offered 8 annas premium.

Mills.—Mill shares were steady with business on the small scale, with the exception of Cambodias which were keenly enquired for at Rs. 11-8 cum dividend of 7 per cent. final.

Cements.—These shares improved considerably, Indians and Gwaliors showing the best rises.

Sugars.—This section was dull and slightly easier. Deccans were offered down to Rs. 285 without interesting buyers whilst Belapurs lost a few points at Rs. 241-4. Mysores firmed up to Rs. 22-12 cum dividend.

Rubber.—This section was lifeless whilst in teas there were sellers in almost all scrips with buyers uninterested.

Miscellaneous.—In the miscellaneous section Tata steels again monopolised attention with business done in the ordinaries up to Rs. 112-8 and deferreds Rs. 490, the market closing firm.

BOMBAY STOCK EXCHANGE

(*By Wire*)

(From our Correspondent)

Bombay, Thursday,

Money Market.—Firmness characterised the money market during the week, with inter bank call quoting at one time as high as 4 per cent. due to heavy securities settlement. The year ending window dressing need makes money remain steady at round about 2 per cent.

Exchange.—The market was very steady with no buyers better than at 1s. 6 5/64d. for near deliveries. Banks are selling T. T. at 1s. 6 1/16d. to mid February; 1s. 6 3/64d. for March; 1s. 6 1/32d. for April-May; 1s. 6d. for June-December. Banks are buying 3 months bills at 1s. 6 1/8d.

Securities Market.—Securities market presented a dull and featureless appearance during the week. 3½ per cent. Paper sagged to Rs. 96-11 but closed steady at about Rs. 97-1. All other medium and longed-dated scrips opened steady round about previous week's closing but later eased off a little. 5 per cent. 1945-55 after remaining at Rs. 119-8 closed easy at Rs. 119. 4 per cent. 1960-70 after touching Rs. 111-7 closed at Rs. 111-1. 1941 closed at Rs. 101; 1947-50 at Rs. 102-12; 1943 at Rs. 105-12; 1955-60 at Rs. 116; 1935 at Rs. 101-7; 1939-44 at Rs. 108; 1940-43 at Rs. 109; 1938-40 at Rs. 109; 6½ per cent. Bombay Development at Rs. 103-7.

Tightness in money coupled with difficulty in doing budless and oversold bull position of market are largely responsible for quietness in security prices. Regarding future there is a feeling of optimism in all quarters and the prospect of 3½ per cent. Paper going above par seems to be at no distant future, considering the constant steadiness maintained by 3½ per cent. India Sterling Loan.

Shares.—Steels continued to be the favourite counter in the market. Much interest was also taken in Cement shares during this week.

Textiles.—This section remained steady in the beginning of the week but closed easier. Easiness in cotton prices as well as absence of any special interest were responsible for the quiet feeling in this section. Until something definite about the exact nature of terms of British Cotton Trade agreement is known it would be rash speculation to judge the course of textile share prices. Also the result of All India Conference of Representatives of Textile Mills about the question of working single shift will greatly influence this section; it is expected, however, that prices will be well maintained at about the present levels. Bombay Dyeings closed at Rs. 927-6; Central Indias steady at about Rs. 330; Centuries quoted Rs. 313-12; Gokaks Rs. 198-12; Indian Bleaching Rs. 150; Indore Malwa Rs. 110; Kohinoor Rs. 218-12; Lakshmi Rs. 841-4; Norarji Rs. 1,535; New Great Rs. 205; Sholapur Rs. 2,900; Simplex Rs. 101-4; Swadeshi Rs. 228-12; and Vishnu Rs. 1,600.

Hydro Electrics.—This group after opening weak, closed steady. Tata Powers after touching Rs. 1,415 closed very steady at Rs. 1,435 while Hydros and Andhra after sagging to Rs. 166 and Rs. 1,650 closed at Rs. 107-4 and Rs. 1,655 respectively.

Iron and Steel.—Iron and Steel shares continued to be the favourite counter for bull speculators as usual, with the result that the Ordinaries after reaching a new high level of Rs. 113-8 closed at Rs. 110-8 while Deferreds were done as high as Rs. 490 though colsed at Rs. 478-12. *Though we consider these shares as excellent for long term prospective scrips, we think the present levels are sufficiently high to warrant profit-taking.*

Cements.—A buoyant tone prevailed in this section with new high levels recorded in all scrips. Despite the price reduction, all companies expected to do better providing ample prospects for higher dividends. Bundis closed at Rs. 34-12; Gwaliors at Rs. 121-8; Shahabads at Rs. 345; Indian Cement at Rs. 365; Katni Deferreds at Rs. 1,200; Ordinary at Rs. 338-12; Punjab at Rs. 25; United at Rs. 69-8.

Miscellaneous.—This section remained steady. Tata Constructions were in good demand being done as high as Rs. 85 though closed at Rs. 84. *These we consider an excellant investment issue and are expected to reach much higher level.* British Burma Petrol after weakening to Rs. 3-8 closed steady at Rs. 4-2. Considering the future prospects, purchases of these scrips are recommended. Belapurs were steady at Rs. 241-14 ex-dividend.

Banks and Insurances.—Bank shares were practically steady though Imperial Bank shares are slightly down at Rs. 1,615 for fully paids and Rs. 407-8 for Contributories, compared to last week's closing of Rs. 1,632-8 and Rs. 417-8 respectively. Barodas were unchanged at Rs. 104; Centrals closed at Rs. 35-12; Bank of India at Rs. 121 and Union at Rs. 6-1.

Oriental Life closed at Rs. 4,125; New Indias were better at Rs. 40-8; Vulcans closed at Rs. 8-6.

LONDON STOCK EXCHANGE

On the Stock Exchange there has again been a dimunition in activity. Most of the markets were dull and featureless. The gilt-edge market was dull but prices were steady. Indian Loans were steady at last prices. The turnover in gilt-edge was only moderate.

Among other sections Teas were practically unchanged and Rubbers showed a downward tendency early in the week. Kaffir's were steady and Nandyroogs improved. Other Minings were steady. Oils were irregular. Among Home Rails, London Passengers recorded an advance. Other industrials were irregular but the fluctuations were narrow in most cases.

AGRA ELECTRIC SUPPLY CO., LTD.

THE MYSORE SUGAR CO., LTD., BANGALORE

Directors' Report for the first year ended 30th September, 1934.

After setting apart the amounts needed for Depreciation, Debenture Interest and for the writing off of preliminary expenditure, there is a balance of Rs. 3,07,445-6-9 to the credit of the Profit and Loss Account to be disposed of as follows:—

1. To declare a Dividend of 10 per cent. Free of Income-Tax on the 2,00,000 shares of Rs. 10 each	Rs.	2,00,000-0-0
2. To make provision for Income-Tax and Super-Tax	,,	48,000-0-0
3. To transfer to Reserve Fund ...	,,	50,000-0-0
4. To carry forward	,,	8,845-6-9
Total ...	Rs.	3,07,445-6-9

The total number of milling days up to 30th September, 1934, was 196 and 14,09,558.4 maunds of cane were crushed up to that date. The entire production of the Factory has been sold out.

To satisfy the increasing demand of the ryots in the Irwin Canal area to grow sugar-cane, with the approval of Government it was decided to enlarge the capacity of the plant to one of 1,400 tons a day and the necessary additional capital of Rs. 20,00,000 has been raised by Debentures which were offered to and entirely subscribed by the Shareholders.

It is expected that the enlarged Factory will come into operation in the latter part of the coming crushing season.

The Company has been granted by the Government of Mysore a ten-year contract for the supply of potable alcohol to the Excise Department and to sell rectified spirits and methylated spirits and has been permitted to use alcohol as an experimental measure on the Company's transport system.

A. V. Ramanathan—*Chairman.* N. Madhava Rau, A. K. Yegna Narayan Ayyar, M. L. Nagappa Setty, A. S. Ismail, B. K. Garudachar, S. Shamanna—*Directors.* R. Ananthasubramanyam—*Secretary.*
